Authority: Carl's Corner					
PIF #:	16561	**Program:**	DWSRF	**PPL Year:**	2026
Related PIFs:					
Project Name: City of Carl's CornerWater Supply Well					
Project Type: Public Water System				**Project Phase:** Design & Construction	
Project Description: The city's water well (State Well Number 32-64-203) only produces 10 gallon per minute to serve 71 connections. This amount is woefully short of the TCEQ requirement of 0.6 gpm per connection. The city desires to increase its water supply by constructing a new water well, or if necessary to obtain other adequate water supply or emergency interconnection. Additionally, 8 households are currently having water hauled to their homes due to lack of water distribution ability.

Authority:	Three Community WSC				
PIF #:	16563	**Program:**	DWSRF	**PPL Year:**	2026
Related PIFs:					
Project Name:	New Well, Tank and distribution Line replacement Project				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: The System has a history of water leaks and low pressure as a result of “piece meal” additions to the system over time. This is primarily due to undersized lines and old-line materials ("grey pipe"). Additionally, the existing wells, service pumps and pressure tanks are not able to produce sufficient water to meet the current system demands, as required by the regulatory agency, TCEQ.

Project Name: 2025 Drinking Water Improvements Project					
Project Type: Public Water System				**Project Phase:** P A D & Construction	
Project Description: The City's existing water well is undersized and failing and cannot be rehabilitated. A new well will need to be drilled to replace it. The City does not have a Water Utility Master Plan. The City's CCN extends over a large amount of undeveloped land. Master Plan is needed to help them direct their efforts to serve these undeveloped areas. The City has many undersized galvanized pipes that are leaking and in need of repair. Many of the existing pipes are not shown on maps and will need to be located to determine the size and length so that an estimated replacement cost can be established.

PIF #:	16614	**Program:**	DWSRF	**PPL Year:**	2026
Related PIFs:					
Project Name: Santo SUD Water System Improvements					
Project Type: Public Water System				**Project Phase:** P A D & Construction	
Project Description: This project addresses Santo SUD's critical infrastructure needs by ensuring compliance with TCEQ requirements and improving system reliability. It includes installing a new 2,000-gallon hydropneumatic tank to double storage capacity, replacing aging and leaking pipelines (upgrading a 3" line to 8" and an 8" line to 12"), and constructing a 120-foot standpipe with an altitude valve for controlled filling. Upgrades will enhance system resilience, reduce water loss, and ensure uninterrupted water supply, representing a vital investment in sustainable water management for the community. An asset management plan will also be completed.

Project Name: South Texas Water Authority regional water delivery system improvements for failing infrastructure					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: South Texas Water Authority (STWA) will make investments in the its infrastructure to include 42" transmission line and the supply and distribution system to ensure reliable service to the more that 49,000 residents it serves. Additional improvements need to be made in the Ricardo WSC service area and the Nueces WSC service area including pump stations, lines, and storage tanks. STWA is consistently fixing leaks and service interruptions in both systems. Both entities are served by STWA, which acts as a wholesale water supplier, administrative support and operations support. Many of the pump stations must be replaced to stop leaks and ensure reliable service. Additionally, lines, valves, pump stations, storage tanks, security, rehabilitation of existing infrastructure need to take place. STWA is also improving its supply capacity with brackish groundwater treatment and a new well.

Project Name:	Water Well and Brackish Groundwater Treatment Facilities				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: This project will include the development of a brackish ground water well and installation of reverse osmosis water treatment facilities to augment Olmito WSC's source of surface water supply due ongoing surface water shortages in the Rio Grande Valley area. Additional water supply capacity is currently needed based on the number of active connections and ACR in place. This project will provide for the treatment of 1.0 MGD of brackish ground-water and will serve as an alternate source of water for the service area and community in addition to improving water supply reliability. The project also includes the preparation of an Asset Management Plan.

Project Name: 2026 DWSRF Water Distribution Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City of Brownwood (City) aims to enhance the water distribution system by improving its existing elevated storage tanks (ESTs) and a high service Pump Station (PS). The ESTs are aging and need to be internally and externally repainted to preserve the useful service life. The Existing PS only has 2 of 3 total pump installed and is looking to install a third pump to increase the total operating capacity. Additionally, the City is addressing water age issues by installing a control valve downstream of the Brown County Water Improvements District (BCWID) take point.

Project Name:	Christian Life Center - Water Treatment Plant				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The Christian Life Center is a non-profit community water system that serves 17 connections in Lubbock County. Christian Life Center is under enforcement for an MCL exceedance of 1,1-Dichloroethylene (1,1-DCE). The system is proposing to install a low-profile tray aeration system to treat the groundwater to compliant standards. In addition to the treatment system, it is also proposed to install water meters to help quantify water losses and facilitate water management. The system will also perform an asset management plan with this project.

Project Name: Cockrell Hill Water Loss Pipe Replacement Project					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City has a history of numerous water main breaks, some of which have resulted in Boil Water notices and area wide water pressures dropping below 20 psi. After the completion of a detailed Leak Detection Study, the City proposes to replace approximately 4,340 LF of existing water mains in areas with known water main breaks and acoustical soundings from the Leak Detection Study that are indicative of existing leaks and probable future water main breaks.

Related PIFs:					
Project Name:	Central Harlingen Asbestos Cement Water Main Replacement Program				
Project Type:	Public Water System			**Project Phase:**	Construction

Project Description: Harlingen Waterworks System owns and maintains a water distribution system consisting of 120 miles of asbestos-cement pipe. As AC pipe had been used only up to the 1980s, all AC water mains are 50 years or older and have reached the end of their serviceable life. Though composing about 30% of the water distribution system, the majority of water main breaks occur in AC portions of the system. To replace AC mains in a congested neighborhood experiencing the highest frequency of leaks and breaks, a pipe bursting method is proposed to minimize disruption associated with open cut construction.

Project Name: Water System Improvements and Capacity Upgrades Project					
Project Type: Public Water System				**Project Phase:** Design & Construction	
Project Description: Project includes replacement of undersized distribution pipes to reduce water loss. Many of those lines are galvanized pipes which are prone to leaks and breaks.The City's water system is within 31 connections of its minimum capacity requirements. A recent study concluded that replacement of an existing elevated storage tower, replacement of undersized distribution lines, upgrades to service pumps and the addition of distribution lines will provide the needed capacity to support the residents. Additionally, the City completed an Assistance Action with the TCEQ in January 2025 for low water pressure in their distribution system.

Related PIFs:					
Project Name: City of Palacios Water System Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The proposed projects includes replacing aging and undersized water mains to reduce leakage and minimize service disruptions. A new groundwater well will be constructed to meet demand, and Well No. 4 will be rehabilitated to facilitate continued service reliability. The project will also address serious fire protection deficiencies by upgrading undersized hydrant lines (1-inch, 2-inch, and 4-inch) to 6-inch mains to provide adequate fire flow. Additionally, new 200,000-gallon elevated storage tank will be built to meet TCEQ storage requirements and improve system resilience. An asset management plan will be developed.

Project Name: MASWTP Raw Water Conveyance Improvements					
Project Type: Public Water System				**Project Phase:** P A D & Construction	
Project Description: ERHWSC currently relies on CCID2 for raw, surface water delivery, but experiences significant water loss (68.5%) during drought conditions due to inefficiencies in the existing system. To address this, an alternative delivery solution was proposed, featuring a new pump station at the Rio Grande River and a 36” raw water line to reduce seepage and evaporation. This new infrastructure aims to provide more efficient, reliable, and cost-effective water delivery, especially during droughts.

Project Name: Gatesville Water System Electrical Resiliency Upgrades					
Project Type: Public Water System				**Project Phase:** Design & Construction	
Project Description: The Gatesville Water System Electrical Resiliency Upgrades Project will modernize and strengthen the system's electrical and communications infrastructure, enhance operational reliability, and bolster security at multiple sites. Across the Water Treatment Plant, Raw Water Intake, Booster Pump Stations, the South Mountain Tank, and other facilities, outdated electrical equipment and generators will be replaced, while new SCADA systems, instrumentation upgrades, and cybersecurity measures will ensure precise monitoring and reduce downtime risks. By collectively addressing these critical improvements, the project will safeguard water service reliability, meet regulatory requirements, and improve overall system performance.

Project Name: Accelerated Large Diameter Waterline Rehabilitation and Replacement Program					
Project Type: Public Water System				**Project Phase:** Construction	
Project Description: Accelerated rehabilitation and replacement of large diameter (>20") water distribution infrastructure to address deficiencies affecting water quality, fire flow availability, water loss, system design and asset age. Includes replacement of lines undersized for current usage, improve integrity of water supply, and replacement of end-of-life components (lines, valves, appurtenances). Work to be performed within existing City rights-of-way under task order-based contracts.

Project Name: 2026 DWSRF Water System Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: North Rural Water Supply Corporation (NRWSC) has experienced water loss in their system due main breaks and leaks that have occurred in their aging water lines. Their main 8-inch diameter water lines in the distribution system were installed in the 1960s as part of the original system installation. Now over 60 years old, NRWSC is targeting these lines for replacement to reduce water loss and improve system reliability. NRWSC has been proactive in replacing portions of their main lines as funding has been available but is looking for assistance to replace the remainder of their 8-inch lines in their East Pressure Plane.

Project Name:	2026 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: This project will modernize and upgrade the existing water distribution system to comply with Texas Commission on Environmental Quality regulations, improve system efficiency, and ensure long-term reliability. The scope of work includes the replacement of a 65,000-gallon bolted steel tank, the installation of a new SCADA system, and the replacement of all Asbestos Concrete water lines. These upgrades will address current deficiencies, reduce water loss, minimize maintenance needs, and extend the service life of the distribution system and provide an asset management plan.

Project Name: North Cameron RO - Phase 3					
Project Type: Public Water System				**Project Phase:** P A D & Construction	
Project Description: The North Cameron Reverse Osmosis Treatment Plant, built in 2006, provides high-quality potable water by desalinating brackish groundwater. It has been a reliable water source without needing additional rights from the Rio Grande River and was designed for future expansion to a 10 MGD capacity. ERHWSC is seeking funding to address current deficiencies and complete the final expansion to reach the plant's ultimate capacity.

Project Name:	Water Facility and Distribution System Improvements				
Project Type:	Public Water System			**Project Phase:**	Acquisition Design & Construction

Project Description: Morgan Mill WSC has a current lease on the site where the water facilities (wells, pumps and tanks) lease expires on June 30, 2025 without any option for renewal. The water facilities will need to be relocated. This proposed project includes the establishment of new well sites (wells and pumps), relocation of some of the existing water facilities (water tanks) to address the critical emergency need resulting from the expiring lease along with improvements (replacement of waterline, valves and fire hydrants) to the water transmission /distribution system to meet current TCEQ requirements and reduce water loss.

Project Name:	LPPA WSC Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: This project is targeted at making distribution system improvements to bring the system in compliance with TCEQ minimum line size requirements (30 TAC,290.44(c)). It also includes pump station improvements to eliminate an existing inline booster pump station, and replace old infrastructure, provide better pressure maintenance for areas of the existing system, and provide operational flexibility through SCADA improvements and piping insulation at the Water Treatment Plant.

Project Name:	City of Liberty Hill Advanced Water Purification Facility and Butler Farms Elevated Storage Tank				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: This project includes the City of Liberty Hill's Advanced Water Purification Facility for direct potable reuse and the Butler Farms Elevated Storage Tank. Both projects are essential to ensuring a reliable, sustainable, and efficient water supply for Liberty Hill that supports both current needs and growth while implementing innovative water reuse strategies and improving the City's water distribution infrastructure. This project will also help the City comply with stricter total phosphorus limits imposed at the South Fork WWTP through treatment and reuse of effluent at the AWPF rather than discharging.

Project Name:	Jones River Bend Water Treatment and Distribution				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: Treated water will flow from Beeville's pressurized pipeline through a pressure reducing valve and RPZ backflow prevention valve into a 2-inch PVC pipeline to a vault near the JRBWSC distribution system. The vault will house Beeville's wholesale water meter with cut-off valves, and potentially a pressure reducing valve on the JRBWSC side. The project will include customer meters and, if funding allows, new service lines throughout the JRBWSC area.

	Start Date	Completion Date	Phase Cost
Planning:			$220,000.00
Acquisition:			$10,000.00
Design:			$56,300.00
Est. Construction:	01/01/2027	06/01/2028	$913,650.00

Green Project: No
Green Amount: $0.00
