# SITE ASSESSMENT - SPECIAL PROJECT (ALL DATABASES SEARCHED TO 1 MILE)

#### **DESCRIPTION OF DATABASES SEARCHED**

#### A) DATABASES SEARCHED TO 1/2 MILE

NPL SRC#: 6558 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for NPL was January, 2000.

The National Priorities List (NPL) is the EPA's database of uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program. A site must meet or surpass a predetermined hazard ranking system score, be chosen as a state's top priority site, or meet three specific criteria set jointly by the US Dept of Health and Human Services and the US EPA in order to become an NPL site.

SPL SRC#: 6712 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for State Superfund Program was December, 1999.

This database is provided by the Natural Resource Conservation Commission. The agency may be contacted at: 512-239-2458.

CERCLIS SRC#: 6474 VISTA conducts a database search to identify all sites within 1 mile of your property.

The agency release date for CERCLIS was October, 1999.

The CERCLIS List contains sites which are either proposed to or on the National Priorities List(NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL. The information on each site includes a history of all pre-remedial, removal and community relations activities or events at the site, financial funding information for the events, and unrestricted enforcement activities.

NFRAP SRC#: 6475 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for CERCLIS-NFRAP was October, 1999.

NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

SCL SRC#: 6559 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for Site Assessment Report was December, 1999.

This database is provided by the Natural Resource Conservation Commission. The agency may be contacted at: 512-239-2525.

The Texas Water Commission Superfund Registry Quarterly Status Report is an information newsletter containing detailed information for NPL sites in the state of Texas.

For more information call VISTA Information Solutions, Inc. at 1 - 800 - 767 - 0403.

Report ID: 308492001

Date of Report: March 7, 2000

Page #25

SCL SRC#: 6710 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for Voluntary Cleanup Program Site Listing was January, 2000,

This database is provided by the Natural Resource Conservation Commission. The agency may be contacted at: 512-239-5891.

**CORRACTS** SRC#: 6556 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for HWDMS/RCRIS was December, 1999.

The EPA maintains this database of RCRA facilities which are undergoing "corrective action". A "corrective action order" is issued pursuant to RCRA Section 3008 (h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. Corrective actions may be required beyond the facility's boundary and can be required regardless of when the release occurred, even if it predates RCRA.

**ERNS** SRC#: 6181 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for was August, 1999.

The Emergency Response Notification System (ERNS) is a national database containing records from October 1986 to the release date above and is used to collect information for reported releases of oil and hazardous substances. The database contains information from spill reports made to federal authorities including the EPA, the US Coast Guard, the National Response Center and the Department of Transportation. The ERNS hotline number is (202) 260-2342.

RCRA-TSD SRC#: 6556 VISTA conducts a database search to identify all sites within 1 mile of your property. The agency release date for HWDMS/RCRIS was December, 1999.

The EPA's Resource Conservation and Recovery Act (RCRA) Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities database is a compilation by the EPA of facilities which report generation, storage, transportation, treatment or disposal of hazardous waste. RCRA TSDs are facilities which treat, store and/or dispose of hazardous waste.

Turner Collie & Braden
Attn..: Mr. John A. Espinoza, P. E., C.F.M.
6800 Park Ten Blvd., Suite 274 South
San Antonio, Texas 78213

Dear Mr. Espinoza:

Hidalgo County Drainage District No.1/ Willacy County are in the process of beginning preparations for the expansion of North Main / Raymondville Drain. This planning process is being brought about by the rapid growth within the Districts boundaries.

As in the preparation of the Hidalgo County Drainage District No. 1 Master Plan Phase I the participation by county wide elected officials, Irrigations District Board Members and private citizens was an essential part for the successful development of this project.

We look forward to seeing you at the scheduled "kick off meeting" at the following location:

DATE: OCTOBER 20, 1999
TIME: 6:00 PM
LOCATION: COMMISSIONERS COURTROOM
100 S. CLOSNER
EDINBURG, TEXAS 78539

If I can be of any assistance please feel free to contact me at (956) 318-2642.

Sincerely,

Godfrey Garza, Jr. District Manager

#### North Main Drain/Raymondville Drain Project Meeting

Hidalgo County Drainage District Number One and Willacy County are in the process of developing a flood protection plan for an area consisting of the Raymondville Drain and the North Main Drain (South Main Drain) located in Hidalgo and Willacy Counties, Texas. The flood protection plan will includestructural alternatives to be investigated consist of a diversion of flows from the North Main Drain towards the Raymodville Drain, increasing the channel capacity of Raymondville Drain, levees for protection of the Raymondville area, and detention storage in Lake Edinburg and La Sal Vieja Lake. Non-structural alternatives include structural buy out, slab elevation of existing structures, and open spaces for flood storage.

In order to get input from local officials and private citizens, a "Kick-off Meeting" is scheduled from Wednesday, October 20 (), 6:00 PM, to be held at the Hidalgo County Commissioners Courtroom located at 100 S. Closner in Edinburg.

Should you have any questions concerning the project or meeting, contact Godfrey Garza, District Manager for the Drainage District at 956-318-2642.

#### NOTICE ...

NOTICE IS HEREBY GIVEN that Hidalgo County Irrigation District No. One (HCID#I) has declared as surplus and intends to convey to private sale that certain real property more particularly described as follows:

A Certain right of way out of Lot 16, Section 254, Tex- Mex (lateral 19, West of 3rd St., San Carlos)

(hereinafter "the Property"). The requirements and conditions of sale are set forth in a resolution adopted by the Board of Directors of HCID#1 at its regular meeting held on October 7, 1999, which may be reviewed by interested parties at the District's office. The Board of Directors will consider the conveyance of the Property by private sale at its regularly scheduled meeting occurring on or after the October 21, 1999.

# **MEETING MINUTES**

Subject:

North Main / Raymondville Drain Public Kick-off Meeting

Job No.:

31-01001-001

Place:

Hidalgo County Commissioners Courtroom, Edinburg, Texas

Date of Mtg.: October 20, 1999; 6:00 p.m.

Attendees:

See Attached List

Date Prepared: 11/12/99

Prepared By: John A. Espinoza

The purpose of the Kick-off meeting was to obtain input from local officials and private citizens concerning the above-referenced project. In addition, the meeting was also used to present project scope of services and describe anticipated project final products.

For this meeting, letters were sent to various entities and officials informing them of the meeting. This meeting was also advertised in the *Edinburg Daily Review* newspaper on Tuesday, October 19, 1999. Copies of the letter (sent to John Espinoza) and the newspaper article are attached.

#### **Meeting Summary**

The following is a summary of the meeting/presentation:

Godfrey Garza started the meeting by thanking everybody for attending and introduction of some of the people attending the meeting. Approximately 20 people attended the meeting including two county commissioners, Gilbert Ward from the Texas Water Development Board (TWDB), representatives from various irrigation districts, some of the consultants, and TC&B staff. Godfrey stated that TC&B would be conducting the project with the assistance of five local consultants. He also noted that funding for this project was from the TWDB and from the Hidalgo County Drainage District Number 1.

Alan Potok then gave a brief description of previous drainage studies conducted for the project site area. Previous studies mentioned included the following:

- 1956 study conducted by the US Department of Interior
- 1975 Design and Construction of Major Drainage Channels
- 1995 study by Corps of Engineers

Alan's presentation included some proposed design characteristics and cost related to the Corps of Engineers 1995 study proposed modifications for the North Main Drain.

John Espinoza then presented the project scope of services including a brief description of each major task that will be conducted as part of the project. The description also included the role of each project team consultant and which task they would be conducting.

During the presentation, the following was noted:

- An advisory committee will be formed consisting of people from local entities including drainage districts, commissioners, etc.
- Future public meeting will be conducted to present project findings and recommendations.

Page 2

• Final products would consist of some form of preliminary plan and profile drawings.

### **Audience Comments**

The following are some of the comments received from the audience:

- Since the project covers a large area, Gilbert Ward (TWDB) requested that for future public meetings, we need to advertise in more than one newspaper in order to reach more people.
- People that live in the western portion of Hidalgo County could be paying taxes for the construction of a project that will be in the eastern part of the county.
- Any modifications proposed at the outfall of the Raymondville Drain could encounter some environmental concerns and design challenges.
- One of the commissioners requested that we need to make sure we get word of the project out to
  the general public. We need to make sure that the public is aware of what we are doing and what
  modifications are being proposed, since eventually they would be voting and paying for
  improvements.

Distribution: Godfrey Garza - HCDD1 Gilbert Ward - TWDB Alan Potok - TC&B File

### Presentation

### FLOOD PROTECTION PLAN NORTH MAIN AND RAYMONDVILLE DRAINS

Hidalgo County Drainage District No. 1
Willacy County
Texas Water Development Board

# Purpose of Project

- Develop a Flood Protection Plan
- Proposed Modifications Evaluated
- Diversion Channel
- Raymondville Drain Channel Modifications
- Levee for the City of Raymondville
- Stormwater Detention

### Watershed Description

- Raymondville Drain
  - Drainage Area 346 Square Miles
  - Length 44 Miles
- North Main Drain
  - Drainage Area 668 Square Miles
  - Length 63 Miles
- Total Drainage Area 1,014 Square Miles
- Population 500,000 Persons

### **Project Summary**

- Reviewed Previous Drainage Studies
  - Numerous Drainage Studies (10)
  - > U.S. Army Corps of Engineers
  - Original Study 1956
  - Revised Hidalgo County FIS April 2001
- Field Reconnaissance
  - Watershed Characteristics
  - Channel Crossings and Drainage Structures
  - > Photographs

- Topographic Information
  - Digital Topography (North Main)
  - U.S.G.S. Topography
  - Design & Construction Drawings
  - Field Surveys (Lake Edinburg and La Sal Vieja)
- Hydrologic Analysis
  - Existing & Future Development
  - Developed HEC-1 Models Using Revised Hidalgo County FIS Models
  - > 2-, 5-, 10-, 25-, 50-, 100-, 250-, and 500-year Storms

- Hydraulic Analysis
  - > HEC-RAS Models
    - North Main Drain
    - Raymondville Drain
    - Proposed Diversion Channel
- Economic Evaluation
  - Determine if Proposed Flood Protection Plan Would Have Economic Benefit
  - Annual Flood Losses Determined Using HEC Flood Damage Analysis Program (HEC-FDA)
  - Agriculture Benefits From Previous Studies

- Environmental Evaluation
- Extent of Environmental Mitigation/Future Needs
- Considered:
- Land Use
- Surface Water
- Vegetation
- **Endangered Species**
- Hazardous Materials
- Site Reconnaissance

### Alternatives

- > Structural Alternative
  - Channel Modifications
    - ✓ Diversion Channel
    - ✓ North Main to Raymondville Drain

|             |               | Average             | Average      |
|-------------|---------------|---------------------|--------------|
| % Diversion | <u>Length</u> | <b>Bottom Width</b> | <u>Depth</u> |
| 10%         | 63,500 feet   | 20 feet             | 15 feet      |
| 25%         | 63,500 feet   | 6-25 feet           | 15 feet      |
| 50%         | 63,500 feet   | 15-20 feet          | 15 feet      |

- Stormwater Detention
  - Diversion Channel
  - ➤ La Sal Vieja
  - Lake Edinburg
- Levee
  - > Raymondville
- Non-Structural Alternative
  - ➤ Buy-Out
  - > Flood Proofing

### Conclusion

- Computed 100-year Flows and Floodplain Less Than Considered to Be Effective by FEMA
- Three Diversion Channel Options Evaluated
- 50% Diversion Channel Option Most Benefit
- Lake Edinburg Can Not Be Used for Stormwater Detention (Gravity)
- Stormwater Detention Improves La Sal Vieja Water Quality
- Levee Not Required for City of Raymondville

### Recommendations

- Continue to implement HCDD1 Drainage Criteria
- 50% Diversion Channel Option
  - Stormwater Detention
    - (Diversion Channel and La Sal Vieja)
  - ➤ Total Project Cost \$31,777,700
  - > Total Annual Benefit \$276,609
  - Benefit Cost Ratio 0.13
  - Current and Future Development

## Recommendations (Cont'd)

- Develop Detailed Topography
  - > Raymondville Drain
  - > Diversion Channel Alignment
  - > Existing Channel Crossings
- Future Analysis
  - Verify Project Assumptions
  - > Lateral Channels
  - ➤ Modify Models
  - ➤ Letter of Map Revision

## Recommendations (Cont'd)

- HCDD1 Compliance with EPA's
  - > National Pollutant Discharge Elimination System
  - > Notice of Intent
  - > Stormwater Pollution Prevention Plan

## Proposed Alternative Summary

| e in the control of the month of the design of the second of the design of the design of the second | Percent of Flow to be Diverted   |  |   |  |  |

RE: Submittal of Draft Final Report for the

Flood Protection Plan for the North Main and Raymondville Drains

Dear Mr. Garza:

Attached for your review are seven copies of the Draft Final Report for the North Main and Raymondville Drains drainage investigation. The purpose of the investigation was to evaluate alternatives for a cost effective flood protection plan that alleviates flooding in sections of Hidalgo and Willacy Counties, Texas. The drainage investigation considered both structural and non-structural alternatives and future development in Hidalgo County.

All tasks as required by our project contract have been completed and results are reflected in the attached report except results for the Economic Evaluation task. We are currently finalizing Economic Evaluation results, in which we will then submit to your office. Also attached is one CD containing the latest versions of HEC-1 and HEC-RAS models.

After your review, we need to schedule a meeting with the Advisory Committee to present project findings and recommendations. Once a meeting date has been selected I can contact Gilbert Ward, Texas Water Development Board (TWDB), and Alan Potok to inquire if they are available to attend. Prior to the meeting, we will also need to publish a "meeting notice" in the local newspaper.

If you have any questions or need additional information please call me at 210-296-2009.

JOHN A. ESPINOZ

Very truly yours,

John A. Espinoza, P.E., C.F.M.

John O. Exinoxi

Project Manager

RE: Flood Protection Plan for the North Main and Raymondville Drains
Revised Report and Response to S&B Infrastructure Review Comments

Dear Mr. Garza:

Enclosed for your review are two copies of revised report sections for the Flood Protection Plan for the North Main and Raymondville Drains project. Revised report sections include report text (Table of Contents, Sections I – VI), tables, exhibits, and Appendix E. Also enclosed is a CD containing revised computer models. This revised report addresses comments as discussed during the meeting conducted August 24, 2001 in the office of S&B Infrastructure. This report also addresses report review comments prepared by S&B in three attachments (copies enclosed). This letter serves as our response to S&B report review comments.

#### RESPONSE TO S&B REPORT REVIEW COMMENTS

We are responding to each comment as follows:

#### General Comments (S&B Attachment 1)

Comment 1: Task 1 – Public Management and Public Involvement – Regarding referencing meetings in the report and attaching meeting minutes.

• Response: Copies of meeting agendas, handouts, and minutes for all meetings conducted to date (two) were handed out during the August 24 meeting. Report Appendix E also includes copies of these meeting documents.

Comment 2: Task 1 – Public Management and Public Involvement – Regarding referencing quarterly meeting notes from Project Advisory Committee meetings and listing of names and positions of committee members.

• Response: Project Advisory Committee members were based on individuals that were suggested by the Drainage District. Due to developments of the project, meetings were not conducted on quarterly time intervals. It is our plan to conduct a meeting with the Advisory Committee once the report has been finalized. Report Appendix E includes copies of all meeting documents including attendee listing.

RE: Flood Protection Plan for the North Main and Raymondville Drains Revised Report and Response to S&B Infrastructure Review Comments

Dear Mr. Garza:

Enclosed for your review are two copies of revised report sections for the Flood Protection Plan for the North Main and Raymondville Drains project. Revised report sections include report text (table of Contents, Sections I – VI), tables, exhibits, and Appendix E. Also enclosed is a CD containing revised computer models. This revised report addresses comments as discussed during the meeting conducted August 24, 2001 in the office of S&B Infrastructure. This report also addresses report review comments prepared by S&B and presented in three attachments (copies enclosed). This letter serves as our response to S&B report review comments.

#### RESPONSE TO S&B REPORT REVIEW COMMENTS

We are responding to each comment as follows:

#### General Comments (S&B Attachment 1)

Comment 1: Task 1 – Public Management and Public Involvement – Regarding referencing meetings in the report and attaching meeting minutes.

• Response: Copies of meeting agendas, handouts, and minutes for all meetings conducted to date (two) were handed out during the August 24 meeting. Report Appendix E also includes copies of these meeting documents.

Comment 2: Task 1 – Public Management and Public Involvement – Regarding referencing quarterly meeting notes from Project Advisory Committee meetings and listing of names and positions of committee members.

• Response: Project Advisory Committee members were based on individuals that were suggested by the Drainage District. Due to developments of the project, meetings were not conducted on quarterly time intervals. It is our plan to conduct a meeting with the Advisory Committee once the report has been finalized. Report Appendix E includes copies of all meeting documents including attendee listing.

Mr. Godfrey Garza September 20, 2001 Page 2

Comment 3: Task 2 - Engineering Evaluation - Field Reconnaissance - Regarding project photographs of existing key channel sections.

Response: Copies of photographs and a cross-reference listing referencing their location were distributed during the August 24 meeting. The photos were presented electronically (on CD) for the Raymondville Drain and on 4"x6" photos for the North Main Drain. Report Appendix A also includes a copy of the photograph cross-reference listing.

Comment 4: Task 2 - Engineering Evaluation - Survey Requests - Regarding field survey data and/or field book information, and a listing of recorded high water marks from residents and industries.

• Response: Electronic field topographic survey data was originally submitted to your office on June 4, 2001 as part of the submittal of the draft report. We are in the process of requesting original field book information from Sesin Engineering. Once field data has been obtained, data will be submitted to your office. There are no records of any recorded high water marks from residents and industries, and thus, are not included in the report.

Comment 5: Task 2 - Engineering Evaluation - Regarding preliminary schematics for alternatives depicting right of way requirements, utility constraints, and structural locations, and the evaluation of any improvements to the existing channels downstream of the diversion channel and to the Laguna Madre.

• Response: New Report Table 11 presents a listing of right-of-way requirements for the proposed diversion channel right-of-way requirements and new Report Exhibit 6 presents a schematic of right-of-way reaches. No improvements are proposed for the channels downstream of the diversion channel or to the Laguna Madre.

Comment 6: Task 2 - Engineering Evaluation - Task review comments are documented in S&B's Attachment 2.

• Response: Please refer to responses for Attachment 2 for this comment.

Comment 7: Task 3 – Economic Reevaluation – Task review comments are documented in S&B's Attachment 3.

• Response: Please refer to response for Attachment 3 for this comment.

Comment 8: Task 4 - Environmental Evaluation - Regarding contacting various resource agencies.

• Response: During the project, we conducted telephone conversations with representatives with the TNRCC and the U.S. Department of the Interior Fish and Wildlife Service to discuss the project. Report Section VI now includes a summary of these telephone conversations.

Comment 9: Task 4 - Environmental Evaluation - Regarding environmental evaluation of Laguna Madre and other areas.

Response: This issue was discussed during the August 24 meeting. It is our
understanding that all requirements as described on the project scope of work have been
met. There are no additional actions required for this comment.

Mr. Godfrey Garza September 20, 2001 Page 3

Comment 10: Task 4 - Environmental Evaluation - Referencing that an environmental assessment was not required.

• Response: No action required for this comment.

Comment 11: Task 5 - Preliminary Engineering Report - Referencing electronic files for Watershed Boundary Map and Floodplain Map.

• Response: Electronic files of the Watershed Boundary Map and Floodplain Map have been previously provided.

Comment 12: Task 5 – Preliminary Engineering Report – Regarding cross section data for reaches on Raymondville Drain, from Lake Edinburg to the Laguna Madre and identified by cross-section number.

• Response: Report Exhibit 2 has been updated to include HEC-RAS cross-section locations.

Comment 13: Task 5 - Preliminary Engineering Report - Regarding electronic copy of final/approved PER.

• Response: An electronic copy of the final PER and all related files including report text, tables, exhibits, and models will be resubmitted as part of the final submittal.

#### Task 2 - Engineering Evaluation (S&B Attachment 2)

Task 2.1.1.a - Preliminary Investigation, Available Mapping — This comment referenced that FEMA map materials and the year of DOQQs be included in the report.

• Response: DOQQs used for this project were dated February 1995. Report Section II includes DOQQ date information.

Task 2.1.1.b - Preliminary Investigation, Field Reconnaissance – This comment referenced that project photographs be provided and describe how channel roughness coefficients were derived.

• Response: Project photographs have been submitted to HCDD1, as previously referenced S&B Attachment 1, Comment 3. A description of how roughness coefficients were determined has been added to *Report Section III*.

Task 2.1.1.c - Preliminary Investigation, Survey Requests – This comment referenced field surveys and their reference in report text.

• Response: The response for this comment has been addressed in our response for S&B Attachment 1, Comment 3.

Task 2.1.2 - Development of HEC-1 basin model (existing w/o project) - This comment referenced that the calibration process be described in the report and attach appropriate tables presenting subwatershed unitgraphs, channel routing data, and rainfall distribution information.

• Response: Project scope of work for Task 2.1.2, states that calibration of models will be based on previous models used for the FEMA FIS study and USACE studies. Due to a lack of stream gage stations located within the project study reaches, calibration process

Mr. Godfrey Garza September 20, 2001 Page 4

did not include a comparison of model results with measured flow values. The current version of the report adequately describes development of HEC-1 models. Subwatershed unitgraph were originally included *Report Table 2 – Watershed Characteristics*. Rainfall distribution data used for this project was originally presented in *Report Table 3*. This rainfall data has not changed. No actions were taken to address this comment.

Task 2.1.3 – Hydraulic studies – This comment referenced which cross sections were modified in HEC-RAS models and how bridge losses were determined to be minimal. This comment also referenced station-discharge tables be provided and storage-outflow models.

- Response: Report Section III was modified to include descriptions concerning cross sections and bridge losses. Report Section III also includes a description of flow routing and Report Appendix C includes copies of storage outflow HEC-RAS models.
- Task 2.1.4 Frequency analysis for existing conditions This comment referenced that a discussion concerning frequency analysis, stage-discharge-frequency curves, and USACE ER 1105-2-101 be referenced in the report.
  - Response: USACE ER 1105-2-101, Risk Based Analysis for Evaluation of Hydrology/Hydraulics Goetechnical Stability, and Economics in Flood Damage Reduction Studies, deals with risk-based analysis for flood reduction studies. Because of a lack of available data and circumstances described in the response under Task 3, a risk-based analysis was not performed.
- Task 2.1.5 Floodplain mapping This comment referenced that the limits of the DTM be provided in the report and exhibits and that a flood damage map be provided.
  - Response: Report Section II now has a statement concerning the digital terrain model (DTM). New Report Exhibit 3 presents economic reaches for the project.
- Task 2.1.6 Future without project conditions (50-year projection) This comment referenced a map of future floodplain is missing, growth factors assumptions, and the "base year" used for the project.
  - Response: Growth factors were based on study conducted as part of the Texas Water Development Board Senate Bill 1 water resource project, which provided population increases from year 2000 to 2050. A table in Report Appendix E shows how the existing and future percent impervious area was computed. This was considered to be the best way to project the growth, since it is unknown where growth will actually occur.

The base year for the hydrologic modeling was assumed to be 1995, based on the year of available aerial photography. Due to the overall size of the watersheds and the fact that most of the development since 1995 has been sparse rural development, changes in development were considered to have a very minor impact on the hydrologic model parameters for the subwatersheds. Thus, the difference in the existing conditions hydrologic model and the economic base year conditions would not affect the overall results of the analysis.

Mr. Godfrey Garza September 20, 2001 Page 5

As part of this project we evaluated scenarios with and without proposed project in place for existing and future watershed conditions. Since the purpose of this project was to develop a flood protection plan with the project in place, an exhibit showing proposed modifications and resulting floodplains was developed. An exhibit showing the future conditions without the project development of an exhibit showing future conditions without the project in place was not developed.

Task 2.1.7 – Hydrologic analysis of alternatives – This comment regarded that a clarification be provided why flood proofing was described but not clear which structures were selected for this alternative and additional clarification on selected alternatives.

• Response: The objective of the project is to determine a cost effective flood protection plan that would alleviate flooding in sections of Hidalgo and Willacy counties. This statement is found throughout the report. Report Section IV, in particular the buy-out and flood proofing alternatives, have statements that the other alternatives were determined to not meet project objectives, and therefore were determined to not be viable. A statement for each alternative was added that mentions specific structures were not evaluated for these alternatives.

#### Task 3 - Economic Re-evaluation (S&B Attachment 3)

Task A - Assumptions – This comment questioned the intent of the economic evaluation and that the benefits to be derived with risk-based analysis is not followed in the economic evaluation.

• Response: Report Appendix E includes structure data used for the economic evaluation.

The intent of the economic evaluation was to use the best data available to make a preliminary economic comparison of the various project alternatives. The scope deliverables were based on an understanding that a structure database with detailed location and property information would be obtained from the Hidalgo County Appraisal District (HCAD) and the Willacy County Appraisal District (WCAD). A database with the needed parameters was not available from the HCAD and WCAD at the time of the study. Physical location information was also not available for many of the structures. Instead, it was necessary to use hard copy maps and manual methods to develop the data on the structures in the study area.

This lack of available data increases the level of uncertainty. In order to perform a risk-based analysis under these conditions, new field surveys and structure appraisals would have to be undertaken. Based on past USACE studies, this field data can take from many months to several years to collect. Budget and time constraints did not permit this data collection.

However, the ultimate objective of making an economic comparison between the alternative plans was achieved. We believe that the economic analysis provides an accurate comparison of the project alternatives using the best available data. A statement concerning our conclusion has been added to *Report Section V*.

Mr. Godfrey Garza September 20, 2001 Page 6

- Task 3.1 Baseline economics investigation This comment requested that affected areas be delineated on a map.
  - Response: A new Report Exhibit 3 presenting the economic reaches for the study area is now included in the report.
- Task 3.1.1 Establish Base Year The comment requested that the base year for the project, which is assumed to be year 2005, be consistent in the economic and hydraulic evaluations.
  - Response: The study area impacted by the proposed project consists primarily of rural agricultural land and sparse residential development, and is not anticipated to develop appreciably in the near future. Additionally there is uncertainty as to where and when development will actually occur. We believe that our assumptions for development and base year reflect actual conditions and any changes in the assumed development would be minor and would not affect the overall results of the analysis.
- Task 3.1.3 Select planning/economic reaches This comment requested that an exhibit showing the planning/economic reaches be included in the report and to define and justify the selected reaches.
  - Response: Our response for Task 3.1 also addresses this comment. A new Report Exhibit 3 showing the economic reaches for the study area is now included in the report. In the original submittal, Report Section V, discussed criteria used for selecting economic reaches.
- Task 3.1.4 Evaluate existing and authorized plans Comment requesting a clarification of plans being evaluated.
  - Response: The report presents the results of all plans that were evaluated as part of this project.
- Task 3.1.5.a Define economic relationships Comment requesting a description regarding the structural inventory be provided in the report including the number and value of residential, commercial, public and others structures.
  - Response: The discussion of the structural inventory has been expanded in Report Section V. Detailed information on the structure types was not readily available from HCAD and WCAD files. The report states that the assumption was made to use the depth-damage curve for one-story single-family residential structures, which is the predominant structure type in the study area.
- Task 3.1.5.b Establish Structure Inventory Database Comment regarding that other damage types for the economic evaluation were omitted.
  - Response: As stated in the assumptions in the project scope of work, "the structure inventory database will be obtained from HCAD/WCAD data." It was assumed that the above data would be available for the economic analysis. However, as previously stated, data for the structure inventory database had to be manually developed using hard copy maps and printouts of parcel data. Similarly, no digital parcel mapping was available. Data for the other damage categories vehicles, roads, etc. was also not available.

Mr. Godfrey Garza September 20, 2001 Page 7

As an alternate means of computing damages for these categories, we investigated the potential of using data developed for recent Federal flood control studies in Harris County, Texas. However, the unit cost value data that was developed for these studies was based primarily on field sampling done by the U.S. Army Corps of Engineers for the Cypress Creek watershed. This Cypress Creek data is reflective of a more densely populated urban area and cannot be reasonably applied to the rural and sparsely developed areas as exists for this project.

In terms of their effect on the conclusions of the study, these other damage categories should only serve to increase the *relative* net benefits of the various alternative plans but would not affect the ranking of the various plans. In other words, the outcome of the economic analysis would not be affected by including these additional damage categories.

For comparison sake, in the densely populated urban watershed of Hunting Bayou in Harris County, Texas, the "other damage categories," comprised the following percentages of the total net benefits of the various projects:

| Structural      | 80% |
|-----------------|-----|
| Vehicles        | 8%  |
| Roads           | 1%  |
| Utilities       | 1%  |
| Emergency Costs | 10% |

This gives an indication that the benefits in "other" damage categories might comprise approximately 20% of the total annual net benefits.

This information has been added to the report.

Task 3.1.5.c - Perform field sampling and surveys to verify accuracy of appraisal district data and complete replacement cost less depreciation — Comment regarding that field sampling was not mentioned in the report and to provide backup documentation and explanation for this field sampling and survey.

• Response: Field sampling of data was conducted for some of the accessible structures to verify that structures existed and structure type. A statement has been describing this effort has been added to the report.

Task 3.1.5.d - Develop depth-percent damage functions and/or stage-damage functions (residential) - Comment requesting that the justification of the use of the IWR depth damage curves be used instead of the USACE-Galveston District curves.

• Response: Report Appendix E now includes a copy of the IWR damage curves. The IWR curves were used instead of the USACE-Galveston District curves, because the IWR curves were specifically developed to be used for all geographic regions of the U.S. The same degree of applicability cannot be assured for the Galveston District curves.

### TurnerCollie@BradenInc.

Mr. Godfrey Garza September 20, 2001 Page 8

The IWR study, which is referenced in the report, includes the following statements that emphasize their accuracy and applicability to the study area:

"The standardized functions represent a substantive improvement over other generalized depth-damage functions, such as the Flood Insurance Administration (FIA) Rate Reviews." (EGM 01-03 [2])

"These curves are developed for nation-wide applicability in flood damage reduction studies. When using these curves, the requirement to develop site-specific depth-damage curves contained in ER 1105-2-100 is waived. Additionally, the requirement to develop content valuations and content-to-structure rations based on site-specific or comparable floodplain information is also waived." (EGM 01-03 [6])

Task 3.1.5.e - Develop commercial and industrial depth damage functions — Comment regarding that no documentation was provided for this subtask and to clarify if this was ever used in the HEC-FDA and if not then explain its exclusion.

• Response: The vast majority of the structures in the study area can be classified as single-family residential, based on field observations. Data on the specific structure type was not readily available from HCAD and WCAD and therefore the one-story single-family residential depth damage curve was applied to all structures in the study area. This assumption is described in the report.

Task 3.1.5.f - Develop agriculture depth-damage curves - Comment regarding that no proper documentation was provided for this subtask and to justify the use of the methodology employed and the derived benefits with respect to the agriculture category.

• Response: Determination of agricultural benefits is a very complex and specialized type of economic analysis, which typically can take several years to complete. When the scope was written, it was assumed that the computation of agricultural benefits was similar to that of structural damages. However, as research was done in an effort to develop agricultural depth damage curves, it was determined that agricultural benefits are never determined in the same manner that structural damages are developed. Instead, an extensive economic analysis is undertaken involving data on crops and soils, and estimates of the effects of high water table (hwt), salinity, and periodic flooding on crop production. Such analysis typically also includes interviews of farmers and other agricultural professionals in the study area.

After several discussions with TAMU agricultural economics professor, Dr. Ron Lacewell, it was recommended that the best way to estimate the agricultural benefits was to adapt information from two previous studies in the LRGV. This approach was taken and is described in detail in the report. No further action will be done for this comment.

Mr. Godfrey Garza September 20, 2001 Page 9

Task 3.1.5.g - Develop infrastructure and personal damage curves for vehicles damage, utility damages, road damages, emergency costs, other costs of using the flood plain, and national flood insurance costs - Comment regarding that this information was not mentioned in the economic evaluation.

• Response: Please refer to above response for Task 3.1.5.b for the explanation of why these other damage categories were not included.

Tasks 3.2.1 and 3.2.2 Floodplain characteristics, project activities affected areas, and alternative plan damages - Comment regarding that in addition to the above mentioned comments, provide the HEC-FDA model for the project and the work maps for the economic reaches, the finished floor elevation used in the HEC-FDA should be explained in the text, and explain and justify flood damage evaluation results.

Response: The HEC-FDA model was originally submitted as part of this report. A new
exhibit showing economic reaches is being submitted as part of this response. In addition,
due to modifications concerning the hydraulic analysis, HEC-FDA models were modified.
Revised models and tables are included as part of the revised report.

A description of the structure finished floor elevations is included in the report.

The alternative plans, with the exception of the 10% diversion, reduce overall damages in the study area. However, all three alternatives do increase the damages along reach 8 where the diversion is proposed. Under existing conditions, there is no channel located where the diversion is proposed, and consequently there are no flood damages because there is no flood source being analyzed along this reach. Under the proposed diversion scenarios, there is the potential that the diversion channel will not contain all of the flood flows and consequently damages would be expected for the structures along the diversion channel. In future phases of this study, a more detailed alternative plan could be designed which ensures that the flood risks to the structures along the diversion channel are not increased beyond existing flooding conditions.

#### Summary

Submitted for your review are revised report sections (text, tables, exhibits, and Appendix E) and a CD containing computer models. This submittal incorporates report review comments prepared for the Hidalgo County Drainage District by S&B Infrastructures. In addition, this letter also serves as our response to S&B report review comments.

Please note that Texas Water Development Board (TWDB) staff is currently reviewing the report (same version that S&B reviewed). As of this submittal date, we have not received review comments from TWDB staff. Once all review comments have been received, we will submit a completed report that includes all sections and appendices.

## TurnerCollie@BradenInc.

Mr. Godfrey Garza September 20, 2001 Page 10

Based on your approval, the next step is to schedule and prepare for the advisory/public meeting in which we can present project findings and results.

If you have any questions regarding our response or need additional information, please call me at 210-296-2009.

Very truly yours,

John A. Espinoza, P.E., C.F.M.

John a. Espinoza

Project Manager

cc: Gilbert Ward, Texas Water Development Board

Alan J. Potok, P.E., TC&B (w/o enclosures)

Lonnie Anderson, P.E., TC&B

#### **AGENDA**

Date:

24 AUGUST 2001

Purpose:

To discuss the status and issues of the TC&B Report: "Flood Protection

Plan for the North Main and Raymondville Drain", June 4, 2001

#### I. Introductions

#### II. Review of Comments Regarding Submitted Report

The following discussion is in accordance with the outline of the scope (Attachment 1) within the contract between Turner Collie & Braden, Inc. (TC&B) and Hidalgo County Drainage District No. 1 (HCDD#1) and the Texas Water Development Board (TWDB):

#### Task 1 - Project Management and Public Involvement

(For description of this task, see page A-6, of Attachment 1)

- (1) Public Meetings. The PER, as a planning document, is required to describe the planning process. Public involvement is a part of the planning process for this project, and 3 public meetings are required to be held throughout the development of the PER: a scoping meeting at the project outset, a meeting when conceptual alternatives are defined, and a meeting upon completion of the alternatives analysis. These meetings need to be referenced in the PER, and the minutes of each meeting attached.
- (2) **Project Advisory Committee**. The project advisory committee is mentioned; however, no quarterly meeting notes and /or attached references were provided. The quarterly meeting notes need to be provided as an attached referenced. The names and positions of the members of the project advisory committee should also be listed.

#### **Task 2 – Engineering Evaluation**

(For description of this task, see page A-6, of Attachment 1)

- (3) **Field Reconnaissance**. Supplementary photography of existing key channel sections were required, and need to be included in the *PER* as referenced attachments.
- (4) Survey Requests. Actual field survey data and/or field book information appear to be missing from the attached exhibits, including field channel cross-section data, and this information needs to be included in the PER. Also, please include in the PER a listing of recorded high water marks from residents and industries.
- (5) Alternative Evaluations and Preliminary Engineering Investigations. The alternatives discussion and associated exhibits did not include any preliminary schematic(s) for each alternative depicting anticipated right of way requirements (existing and proposed widths), utility constraints (adjustments and/or relocations), and structural locations. There appear to be no evaluations of any improvements to the

existing channels downstream of the diversion channel and to the Laguna Madre. Please provide incorporate this information in the *PER* accordingly.

(6) Technical Review Comments by S&B are shown in Attachment 2

#### Task 3 - Economic Reevaluation

(For description of this task, see page A-8, of Attachment 1)

(7) Technical Review Comments by S&B are shown in Attachment 3

#### Task 4 — Environmental Evaluation

(For description of this task, see page A-9, of Attachment 1)

- (8) This task requirement includes the early invitation and notice to resource agencies. Has any preliminary coordination and/or scoping letters been submitted to the resource agencies? If so, these should be included as referenced attachments to the *PER*.
- (9) The environmental evaluation appears to be limited to the diversion channel area. The project limits for this project extend to the Laguna Madre. There is no discussion regarding the required coordination for the use of La Sal Vieja Lake for the proposed diversion alternative. Also, although the required goal of the project is not to increase the flow at the outfall to the Laguna Madre, drainage improvements along the existing channels (prior to and beyond La Sal Vieja Lake) are anticipated to be included in the design of the project, to assist in future maintenance and/or increase the efficiency of the channel (within the outfall permit requirements). The environmental evaluation needs to include the entire project limits.
- (10) With the exception of those items noted in (8) and (9), the environmental evaluation meets the preliminary requirements of the *PER*, which, under the TWDB contract, does not require a draft environmental assessment (EA) for agency review.

#### Task 5 – Preliminary Engineering Report

Additional comments:

- (11) Please provide electronic files for Watershed Boundary Map and Floodplain Map.
- (12) Please provide cross-section data for the reaches on Raymondville Drain, from Lake Edinburg to the Laguna Madre; please place these on the Floodplain Map and identify by cross-section number.
- (13) Please provide an electronic copy of the final/approved PER.

#### **III. Primary Purpose of Report**

The ultimate purpose of the report is to provide documentation for the following:

- To obtain appropriate approval for crossing major watershed boundaries
- To provide a basis for planning documents to be developed for future coordination and approval of project development, funding, and ultimate construction.

#### IV. Miscellaneous

- Technical Review Committee Meeting
- Schedule

#### V. Adjournment

#### Raymondville Drain Outfall System

A technical review of the report entitled "Draft Final Report Flood Protection Plan for the North Main and Raymondville Drains, dated June 4, 2001 prepared by Turner Collie & Braden Inc., was reviewed by S&B infrastructure with respect to the scope of services as outlined in TC&B's contract with Hidalgo County Drainage District No. 1:

#### TASK 2 - ENGINEERING EVALUATION

#### 2.1 HYDROLOGY AND HYDRAULICS

#### 2.1.1 Preliminary Investigations

Available Mapping.

Comment: Exhibits of the above mentioned map material will be helpful in the report and clarify in text that FEMA maps were provided for information purpose only. The year of DOQQs in the report will aid in supplementing the impervious calculations.

#### Field reconnaissance

Comment: Please review the June 11, 2001 memorandum from S&B Infrastructure, Ltd. Additionally, describe in text the channel roughness derived during field reconnaissance and also attach the supporting field data.

Survey requests

Comment: Please review the June 11, 2001 memorandum from S&B Infrastructure, Ltd. Describe in text with respect to item c and item d.

2.1.2 Development of HEC-1 basin model (existing w/o project)

Comment: Describe in text the calibration process of the parameters and results derived and provide appropriate models. Attach appropriate tables for the subwatershed, unitgraph (Appendix E), and channel routing in the main text for the existing and future. In a table the rainfall distribution for all frequencies will be helpful.

#### 2.1.3 Hydraulic studies

Comment: Please clarify which cross sections were modified in HEC-RAS. Text indicates detailed bridge data was unavailable and was assumed that the bridge losses were considered to be minimal. Please attach a table for the location of new bridges and also justify the assumption in text that this is true for all the studied frequencies with appropriate photographs or any other pertinent information.

Provide a flow distribution (station-discharge) table or graph.

Provide the S-O model for existing and future conditions. The text does not give any information on the S-O model. It appears that the SV-SQ relationship remain unchanged with various diversion options. Please justify the assumption and provide the explanation in text.

#### 2.1.4 Frequency analysis for existing conditions

Comment: This section or discussion about the frequency analysis is missing in the text. Please describe the selection process for location of interest and also justify the validity of the selection for both the watersheds.

The stage-discharge-frequency curves are missing and the text should include the development of the curves.

The USACE reference ETL 1105-2-101 cannot be found. The risk-based analysis, which the scope implies is referenced in ER 1105-2-101. Please include in text and appropriate models for both the existing and future conditions as required by ER 1105-2-101.

#### 2.1.5 Floodplain mapping

Comment: Please include in text the limits of the DTM developed and provide an exhibit for the effort. The flood damages map is missing and should include for both the existing condition and the residual flood damages with appropriate alternative or a selected alternative.

#### 2.1.6 Future without project conditions (50-year projection)

Comment: Include in text about item a, and changes made to item b. The map of future condition floodplains is missing.

In Appendix E, growth factors were applied to the watershed to arrive at the future conditions land use. As an example in existing conditions Sub-basin 45s, which is at 30.8 % impervious and sub-basin 7s is at .1% impervious, it appears with the assumption both the areas are growing at the same rate for future condition. Please justify the assumption.

In Section V Economic Evaluation page V-2, "A base year of 2005 was chosen since it is the year ...." For effective comparison the

land use in 2005 is not defined and appropriate water surface elevations were not provided. From the information provided, the base conditions for this project was never established and thus any effective comparison with respect to the benefits derived by the plan can never be properly evaluated.

#### 2.1.7 Hydrologic analysis of alternatives

Comment: Floodproofing was described in the text but it's not clear which structures were selected and without appropriate documentation, this option cannot be reviewed.

The report needs to clarify that only selected alternative is presented in detail and it will be helpful to document that sufficient alternatives were evaluated prior to recommending the selected alternative. Appropriate documentation with respect to in-house memorandum and models will be very helpful without which the selected alternative evaluation cannot be verified to be the best available solution.

The placement of fill on the Raymondville drain should be explained for positive drainage in the text.

The Buyout option was found to be not viable as described in the text. Without appropriate documentation, the conclusion derived cannot be determined.

It is to be noted that the base condition 2005 year was never established in the report.

With respect to the hydrological and hydraulic models,

- DI/DQ backup data is needed to confirm the diversion flows
- S-O model is needed to verify the routing
- Base conditions 2005 year should be established
- Future condition growth factors should be justified
- The diversion rates of 10%, 25% and 50% are not accurate when checked with respect to the flow rates in the channel
- Text should reference the diversion flow rate to the frequency with which it was assumed
- Based on the models, the diversion rates as assumed are ineffective for frequencies 50% to 2% flood. The flow rates will decrease for those frequencies and the percentage as assumed is not valid based on the presented results

- With the diversion in place the SV-SQ relationship in the HEC-1 model remained unchanged. Please justify this assumption with appropriate model
- There are extended sections starting at the 4% flood
- The selection of the recommended plan is inconclusive with the data provided
- The confidence and the reliability of the model was never established

- /√C for the S - \*S&E: Comments: Task 3"

#### RAYMONDVILLE DRAIN OUTFALL SYSTEM

A technical review of the letter report entitled, "Submittal of Economic Evaluation Results for the Flood Protection Plan for the North Main and Raymondville Drains, dated August 06, 2001, prepared by Turner Collie & Braden, Inc., was reviewed by S & B Infrastructure, Ltd., with respect to the scope of services as outlined in Task 3 Economic Re-Evaluation.

#### **TASK 3 - ECONOMIC RE-EVALUATION**

#### A. ASSUMPTIONS

The economic analysis provides a description of the investigations, procedures, and analyses conducted to establish the value of property within the floodplain; the expected annual flood looses under existing and future conditions; the residual flood losses; the annual flood losses; and the equivalent annual flood reduction benefits for various plans considered. The benefit of the flood hazard reduction plans will be determined by comparison of the with and without project conditions. A probabilistic display of benefits will be provided in accordance with the risk-based analysis as computed using HEC-FDA "Flood Damage Analysis Package" model.

It is not clear on the intent of this economic evaluation. The assumptions in the scope clearly state the deliverables for this analysis. As outlined in the assumptions "and analyses conducted to establish the value of property within the floodplain", the economic evaluation report does not include the number of structures or the total value of the property in the floodplain and the expected damages for the future without project conditions. Further, the assumptions that the benefits are to be derived with risk-based analysis is not followed in this economic evaluation.

3.1 Baseline economics investigation Delineate affected area

An exhibit of the affected area with reaches will be helpful in understanding the economic evaluation.

#### 3.1.1 Establish base year

The report needs to describe more clearly the base year for the project, which is assumed to be year 2005. There should be consistency in the economic and hydraulic evaluations on the base year.

3.1.2 Establish period of analysis and analysis years

3.1.3 Select planning/economic reaches

Exhibit on the planning/economic reaches will be helpful. Also, define and justify the selected reaches.

3.1.4 Evaluate existing and authorized plans

Please clarify what plans are being evaluated. The report does not imply any other plans were evaluated other than those analyzed.

3.1.5 Define economic relationships

This subtask involves developing a structure inventory database using county tax records and parcel from Hidalgo and Willacy Counties' appraisal districts and determining what structures and other property are in the floodplain, the value of structures and associated contents and the structure's base elevation.

Please describe in the report regarding the structural inventory. It should clearly state the number of residential, commercial public and others.

Establish Structure Inventory Database

The structure inventory database will be obtained from HCAD/WCAD data. The structure database will include real property records and associated digital parcel mapping. The structure database will be compiled to define the Damage Categories, Structure Occupancy Types, and Structure Attributes for input into the HEC-FDA computer program. Damage categories will include residential, commercial, public, and industrial structure and contents, roads, emergency costs, vehicle, utilities, and park areas.

The other damages for the economic evaluation were omitted. This is an essential element for the evaluation of this project and is a deviation from the presented scope of services.

Perform field sampling and surveys to verify accuracy of appraisal district data and complete replacement cost less depreciation.

The report does not mention anything with respect to this subtask. Provide backup documentation and explanation for the field sampling and survey.

Establish value of floodplain property

Develop depth-percent damage functions and/or stage-damage functions (residential).

Please provide and justify the use of the IWR depth damage curves instead of the USACE-Galveston district curves.

Develop commercial and industrial depth-damage functions

There is no proper documentation for this subtask. Clarify if this was ever used in the HEC-FDA and if not then explain its exclusion in HEC-FDA.

Develop agriculture depth-damage functions

There is no proper documentation for this subtask. Justify the use of the methodology employed and the derived benefits with respect to the agriculture category.

Develop infrastructure and personal damage curves

Vehicle damage

Utility damage

Roads damage

Emergency costs

Determine other costs of using the flood plain

National flood insurance costs

The above mentioned were never used in the economic evaluation. Please justify.

- 3.2 Determine alternative damages
- 3.2.1 Determine floodplain characteristics (existing conditions without project)

Damages for the baseline conditions without a project in place will be approximated using the data sources described, and identifying average annual damages using the HEC-FDA software.

#### 3.2.1 Project activities in affected areas (future conditions without-project)

Estimates of future growth benefits will be based on current economic growth indices. Economic and demographic projections by analysis year will be determined for the study area using the data from the LRGVDC and the TWDB. The potential for additional damages resulting from increasing water surfaces will then be evaluated using the HEC-FDA model in concert with the hydrologic studies performed.

#### 3.2.2 Alternative plan damages

Alternative plans are to be sized for 10-, 25-, and 100- year flood control capacity. Damage reductions associated with the alternatives will be performed using the HCAD data sets in the GI, and comparing the reduction in damages associated with modifications to the individual floodplains. The alternatives will be examined against multiple profile runs of the 2-, 5-, 10-, 25-, 100-, 250-, and 500-year storms.

In addition to the above mentioned comments. Please provide the HEC-FDA model for the project and the work maps for the economic reaches. The finished floor elevation used in the HEC-FDA should be explained in the text. Based on Table 8, results of Structural Damage Analysis the residual flood damages with the all of the analyzed alternatives will result in the increase in flood damages. Please explain and justify.

TC&B Job No. 31-01001-001 2. C Raymondville and North Main Drains

Mr. Gilbert R. Ward Texas Water Development Board 1700 North Congress Avenue Austin, Texas 78711

RE: Flood Protection Plan for the North Main and Raymondville Drains Response to TWDB / TxDOT Comments

Dear Mr. Ward:

On October 10, 2001, we received from your office a copy of an email message dated September 12, 2001 addressed to you from David Stolpa with the Texas Department of Transportation. Mr. Stolpa's email presented his review comments for the North Main and Raymondville Drains report. A copy of Mr. Stolpa's email is enclosed.

After receiving the comments, Joseph Barrow, P.E., with TC&B had a telephone conversation with Mr. Stopla to discuss his comments. The following is our response to Mr. Stolpa's comments.

- Comment 1: Concerning the calibration of data.
  - Response: As referenced in report Section II Modeling Methodology, the purpose of this study was to establish a conceptual flood protection plan and not necessarily to determine detailed floodplain delineations. Due to a lack of stream gage stations located within the project study reaches, calibration process did not include a comparison of model computed peak discharges with measured flow values. The basis of project hydrologic methodologies, assumptions, factors, and models was from information developed as part of the revised Flood Insurance Study (FIS) conducted for Hidalgo County. Since the Revised FIS project was reviewed and approved by FEMA for this watershed, the FIS information was also used for this project.
- Comment 2: Concerning the use of 24-hour rainfall event (duration) and adjustment of point rainfall values (areal adjustment).
  - O Response: As stated for Comment 1, project hydrologic methodologies, assumptions, factors, and models was developed in part from the revised FIS project for Hidalgo County including rainfall durations, depths, and other adjustments. To address the concern of project rainfall data, we compared peak flows with those calculated with the "Cypress Creek Formula". The "Cypress

Mr. Gilbert Ward October 30, 2001

Page 2

Creek Formula" was developed to determine flow for agricultural watersheds along the Gulf Coast, Atlantic Cost and southern Florida considering rainfall excess. Results indicate that computed flows using the formula for subwatersheds have an average difference of 8 percent when compared with flows developed using project hydrologic methodologies and models.

In addition, we have also added additional text to report Sections I, II, III, and VII addressing Mr. Stolpa's review comments. This additional text has been high-lighted in the enclosed copies of the report sections.

If you have any questions regarding our response or need additional information, please call me at 210-296-2009.

Very truly yours,

John A. Espinoza, P.E., C.F.M.

Contract No. 99-483-305, Hidalgo County Drainage District

Gilbert:

#### SUMMARY

I have finished a quick review of the drainage study. Several things come to mind.

- 1. First, was there any attempt at calibration? It is possible that there may not be any data but some discussion of the implications the lack of or ability to calibrate would help set some direction as to how to use the study as a planning tool. That is, does the community desire a tool that is in line with statistical expectation, or is a conservative tool acceptable?
- 2. I also have some concerns regarding the hydrology, and in particular, the consultants's development of the storm models used in the HEC1 runs. Unless they can provide some clarification, the study may be in question.

#### DURATION

In explanation, by looking at the HEC1 data for the North Main Drain, it would appear that this project was modeled as a series of sub watershed having a combined drainage area of at least 668 square miles. That is, an overall system. When selecting a storm duration for a basin, especially if the storm is to be applied to an analysis of the total a system, the storm duration selected should be equal to or greater than the time of ncentration (Tc) for the total basin. Otherwise, we cannot be certain that the model tput reflects a full basin response.

The selected storm duration appears to be a 24-hour event. However, it does not appear that a Tc was developed for the overall basin in this project. If the overall TC exceeds 24 hours, then use of the 24-hr storm is questionable. In fact, the HECl input indicates that many of the sub basins individually have lag times (lag is generally estimated as being 0.6 Tc) greater than 50 hours. Therefore, even the response of these sub basins, or any sub basin with a lag time over 14 hours, is questionable even if it was intended to individually apply a 24-hour storm to the sites.

#### AREAL ADJUSTMENT

Another storm model issue regards the precipitation depths. After talking to you, I did find a note in the HEC1 input that indicated that point rainfall values (for areas up to 10 square miles) were adjusted. What is not clear is how the adjustments were (or were intended to be) made. The storm/ PH cards (contained under the KK card for sub basin SC-7a) appear to contain the point values computed using the USGS Report 98-4044. In addition, the second field of the PH card was left blank indicating that the basin area from the BA record would be used for the adjustment.

If we were simply looking at sub basin SC-7A, I would think that the areal adjustment for that individual basin using this approach worked just fine. In addition, since the storm data is not repeated for each basin, the default procedure in HECl should pick up the rainfall data from the SC-7A PH card and adjust the rainfall for each individual basin.

However, I have a question as to whether the intent was to model the response of the overall system. If so, the adjustment that should be expected for the 668 square mile basin "system" may not be appropriately considered with the approach that was actually ed. Especially since most of the individual basin are relatively small and very little sjustment under these conditions would be expected. If the intent was to model the individual sub basins a s being independent of each other and the "system" why the system routing?

Anyhow, let me know if you have any questions or if I can be of additional assistance. I would like to see what comes of this. TxDOT does try to consider local drainage plans when working with the communities and planning our own structures.

~avid

I'm satisfied with your response to comments made by David Stolpa of TxDOT. Be sure that when you finalize the report, you provide in the report the comments sent to you, which included the TxDOT comments and your responses to all comments. I talked with David and I guess you convinced him also. The format can be like your letter to me but you should reproduce the entire comment, and then provide your response. Call if you have questions.

TC&B Job No. 31-01001-001 2. 6
Raymondville and North Main Drains

Mr. Gilbert R. Ward Texas Water Development Board 1700 North Congress Avenue Austin, Texas 78711

Re: Flood Protection Plan for the North Main and Raymondville Drains Response to TWDB / TxDOT Comments

Dear Mr. Ward:

On October 30, 2001, we received a copy of a letter dated October 16, 2001, addressed to Godfrey Garza, Hidalgo County Drainage District No. 1, from Tommy Knowles with the Texas Water Development Board. Mr. Knowles' letter presented review comments for the North Main and Raymondville Drains draft final report. A copy of Mr. Knowles' letter is enclosed. The following is our response to Mr. Knowles' comments.

- Comments 1 through 5: Summary.
  - o Response: No response required
- Comment 6: Concerning initial abstractions.
  - o **Response:** As discussed in the report, an initial abstraction value of 1-inch was used as a base value. This base value was increased to 2 or 3-inches for certain land uses such as orchards or vineyards and for areas located within subareas that have numerous irrigation channels.

Additionally, initial abstraction values were increased for areas with major depression storage. Consequently, for subareas with extensive areas of major depressions, the initial abstraction values were calculated to be as high as 7.3-inches.

- Comment 7: Concerning peak flows related to 25 percent diversion at some cross sections being higher than peak flows related to 15 percent and 50 percent diversion at the same cross section.
  - o Response: Upon review of the peak flows at the locations inquired about, the routing data for the 25% Diversion HEC-1 model was found to be different from the routing data in both the 10% Diversion and 50% Diversion HEC-1 models.

Mr. Gilbert Ward November 13, 2001 Page 2

The routing data for the Rt26A location was changed in the 25% Diversion model to match the correct data in the other models.

The 25% Diversion HEC-1 model was executed, and the peak flows were compared with those previously submitted. The largest increase in peak flows was 106 cubic feet per second (cfs), and the largest decrease was 121 cfs. These represent a 5 percent increase and a 6 percent decrease in flows, respectively.

The new flows were entered in the HEC-RAS model, and the model was executed. The largest increase in the water surface elevations was 0.14 feet (0.14'), and the largest increase in flood plain was 0.01 feet (0.01'). This increase is not considered substantial, and the conclusions and recommendations will not change as a result of this modeling change.

Copies of revised 100-year storm HEC-1 input/output, HEC-RAS model output, and Tables 4 and 5 are enclosed.

- Comments 8 A-C: Texas Department of Transportation comments.
  - o **Response:** These comments were addressed in a previous letter sent to your office dated October 30, 2001.

If you have any questions regarding our response or need additional information, please call me at 210-296-2009.

Sincerely yours,

John A. Espinoza, P.E., C.F.M.

Re:

Flood Protection Planning Contract Between the Hidalgo County Drainage District No. 1 (District) and the Texas Water Development Board (Board), Contract No. 99-483-305, Draft Final Report

Dear Mr. Garza:

Staff members of the Texas Water Development Board have completed a review of the draft report under TWDB Contract No. 99-483-305. As stated in the above referenced contract, the District will consider incorporating comments from the EXECUTIVE ADMINISTRATOR shown in Attachment 1, and other commentors on the draft final report into a final report. The District must include a copy of the EXECUTIVE ADMINISTRATOR's comments in the final report.

Prior to submitting the Final Report, please contact Mr. Gilbert Ward, the Board's designated Contract Manager for this study at (512) 463-6418 to discuss the comments attached. It may be possible that a revised draft will need to be submitted prior to the Final Report. If you have any other questions, please contact Mr. Ward.

Sincerely,

Tommy Knowles, Ph.D., P.E. Deputy Executive Administrator

Office of Planning

Cc:

Gilbert R. Ward, TWDB John Espinoza, TC&B

# ATTACHMENT 1 TEXAS WATER DEVELOPMENT BOARD Contract No. 99-483-305 Flood Protection Plan for the North Main and Raymondville Drains

- 1. The report describes the results of hydrologic and hydraulic analyses completed in an effort to determine a cost effective flood protection plan that will alleviate flooding in sections of Hidalgo and Willacy Counties. The study examines structural and nonstructural alternatives and considers future development in the study area.
- 2. Recommendations include construction of a diversion channel to divert flow from the North Main Drain into the Raymondville Drain watershed and of facilities that would allow for storm water detention within the diversion channel, the Raymondville Drain and La Sal Viejo Lake. The report indicates that, with the proposed improvements, computed 100-year storm water surface elevations for the Raymondville Drain in the vicinity of the City of Raymondville are within existing bank elevations.
- Standard principles and methodologies have been employed in the accumulation and presentation of data in this report. Proposed construction improvements appear to be eligible for Board financing. Estimations of project costs appear to be based on reasonable assumptions.
- 4. The Final Report would be appropriate for use in support of an application to the Board for financing the proposed improvements. All additional information required by appropriate Board rules, 31 TAC 363, and required to make legal findings required by Texas Water Code Chapter 17.771-776 would be required at the time of application. Flood control work is not eligible for the Board's pre-design funding option.
- 5. An Application for Approval of Reclamation Project need not be filed with the Texas Natural Resource Conservation Commission for the referenced proposal. It was determined from our review that the proposed project, since it is in Hidalgo County, needs to be permitted by the County. Hidalgo County by virtue of its participation in the National Flood Insurance Program, and in accordance with Section 16.236 (d) (3&4) of the Texas Water Code, has approval authority for the project. If the County has not already done so, they should insure that the proposed construction is documented and permitted in accordance with their Flood Hazard Prevention Ordinance. This documentation should also be submitted by the County to the Federal Emergency Management Agency to obtain a Letter of Map Revision (LOMR) of Hidalgo County's Flood Insurance Rate Map.
- 6. Table 2. The initial abstractions are high for many sub-regions. For example, it is 7.319 for 28R sub-region. Page III-3; text states that "initial abstraction rates of 1.0 inch was generally appropriate. Explain the reason for the higher rates and how the numbers are obtained.
- 7. Table 4. The peak flows related to 25% diversion at some cross sections are higher than the peak flows related to both 15% and 50% diversion at the same cross section (i.e. HEC-RAS stations 109185 and 149670). Explain.

- 8. A. There does not appear to be any attempt at calibration. It is possible that there may not be sufficient data but some discussion of the implications as to the lack of or ability to calibrate would help set some direction as to how to use the study as a planning tool. That is, does the community desire a tool that is in line with statistical expectation, or is a conservative tool acceptable?
  - B. There are concerns regarding the hydrology, and in particular, the development of the storm models used in the HEC1 runs. Unless clarification can be provided. the results may be in question. It would appear that this project was modeled hydrologically as a series of sub-watersheds having a combined drainage area of at least 668 square miles, that is the overall system. When selecting a storm duration for a basin, especially if the storm is to be applied to an analysis of the total system, the storm duration selected should be equal to or greater than the time of concentration (Tc) for the total basin. Otherwise, it cannot be certain that the model output reflects a full basin response. The selected storm duration appears to be a 24-hour event. However, it does not appear that a Tc was developed for the overall basin in this project. If the overall Tc exceeds 24 hours (as it does), then use of the 24-hr storm is questionable. In fact, the HEC1 input indicates that many of the sub basins individually have lag times (lag is generally estimated as being 0.6 Tc) greater than 50 hours. Therefore, even the response of these sub basins, or any sub basin with a lag time over 24 hours, is questionable even if it was intended to individually apply a 24-hour storm to the sites.
  - C. Another storm model issue regards the precipitation depths. Notes in the HEC1 input indicate that point rainfall values (for areas up to 10 square miles) were adjusted. What is not clear is how the adjustments were (or were intended to be) made. The storm/ PH cards appear to contain the point values computed using the USGS Report 98-4044. In addition, the second field of the PH card was left blank indicating that the basin area from the BA record would be used for the adjustment. If we were simply looking at sub basin SC-7A, I would think that the areal adjustment for that individual basin using this approach worked just fine. In addition, since the storm data is not repeated for each basin, the default procedure in HEC1 should pick up the rainfall data from the SC-7A PH card and adjust the rainfall for each individual basin. However, the question is whether the intent was to model the response over the sub-area of the overall system. If so, the adjustment that should be expected for the 668 square mile basin "system" may not be appropriately considered with the approach that was actually used. Especially since most of the individual basins are relatively small and very little adjustment under these conditions would be expected. If the intent was to model the individual sub basins as being independent of each other and the "system". why the system routing?

Subject: final report - Hidalgo Co Drainage Dist.- Contract 99-483-305

John,

TC&Bs responses to the TWDB comments on the Draft report provided in the 16 October letter addressed to Mr Godfrey Garza, have been found to be complete and are acceptable to the Board. It will not be necessary to submit a revised draft for review. As stated in the contract, the final Report should include the Boards comments and responses. We look forward to receiving the final Report, 10 bound copies, 1 unbound and 1 electronic.

Thanks again. Let me know if you have any questions.

gil
