TAYLOR COUNTY, TEXAS

Introduction

by
W. O. George
Assistant Geologist
U. S. Geological Survey

This publication contains records of wells and springs, logs of wells and test holes, and analyses of water from wells in Taylor County, Texas. The records were obtained in an inventory made by the Work Projects Administration (Work Project No. 12765) with Mr. Hoyt A. Smith as project superintendent. The project was started February 6, 1939 and the field work was completed September 5, 1939.

The analyses were made by chemists employed on Work Projects Administration Project No. 1'443 under the direction of Dr. E. P. Schoch, Director of the Bureau of Industrial Chemistry, The University of Texas, and E. W. Lohr, Chemist of the Quality of Water Division of the Federal Geological Survey. The Bureau of Industrial Chemistry furnished laboratory space and equipment. The analyses in this release are tabulated in parts per million. A number of these analyses are also given in milligram equivalents per liter for the convenience of those who prefer this form of expressing the quality of water.

This release was typed by typists employed on Work Projects Administration Project No. 1'443.

The records serve as a guide to land owners, well drillers, and others who need information regarding wells, the depth to ground water in different parts of the county, and the quality and chemical character of water yielded by the wells. They afford a basis for the more intensive investigation that is now being carried on by the State Board of Water Engineers in cooperation with the Federal Geological Survey. The purpose of this investigation is to determine the distribution and extent of the available ground-water supplies, and the safe yield of the underground reservoirs.

Records of wells and springs in Taylor County, Texas
 (All wells are drilled unless otherwise noted in "Remarks" column.)
 (See "Logs of V. . A. test wells" for all records of test wells.)

Partial analyses of water from wells and springs in Taylor County, Texas

(Analyzed at The University of Texas under the direction of Dr. E. P. Schoch, Director of the Bureau of Industrial Chemistry, E. W. Lohr, Chemist, and James W. Yett, Assistant, U. S. Department of the Interior, Geological Survey; by D. F. Riddell, and H. T. Davidson, Chemists; and Martin Wieland, Jack Ramsey and James H. Raby, Assistant Chemists. Nitrate and fluoride determined by E. W. Lohr. Results are in parts per million. Well numbers correspond to numbers in table of well records.)

a/ Sulphate less than 10 parts per million.

b/ Nitrate less than 20 parts per million.

c/ Analyses of selected wells are given in milligrams
 equivalents per liter on page 37.

Chemical analyses--Continued

Results are in milligrams equivalents per liter
