

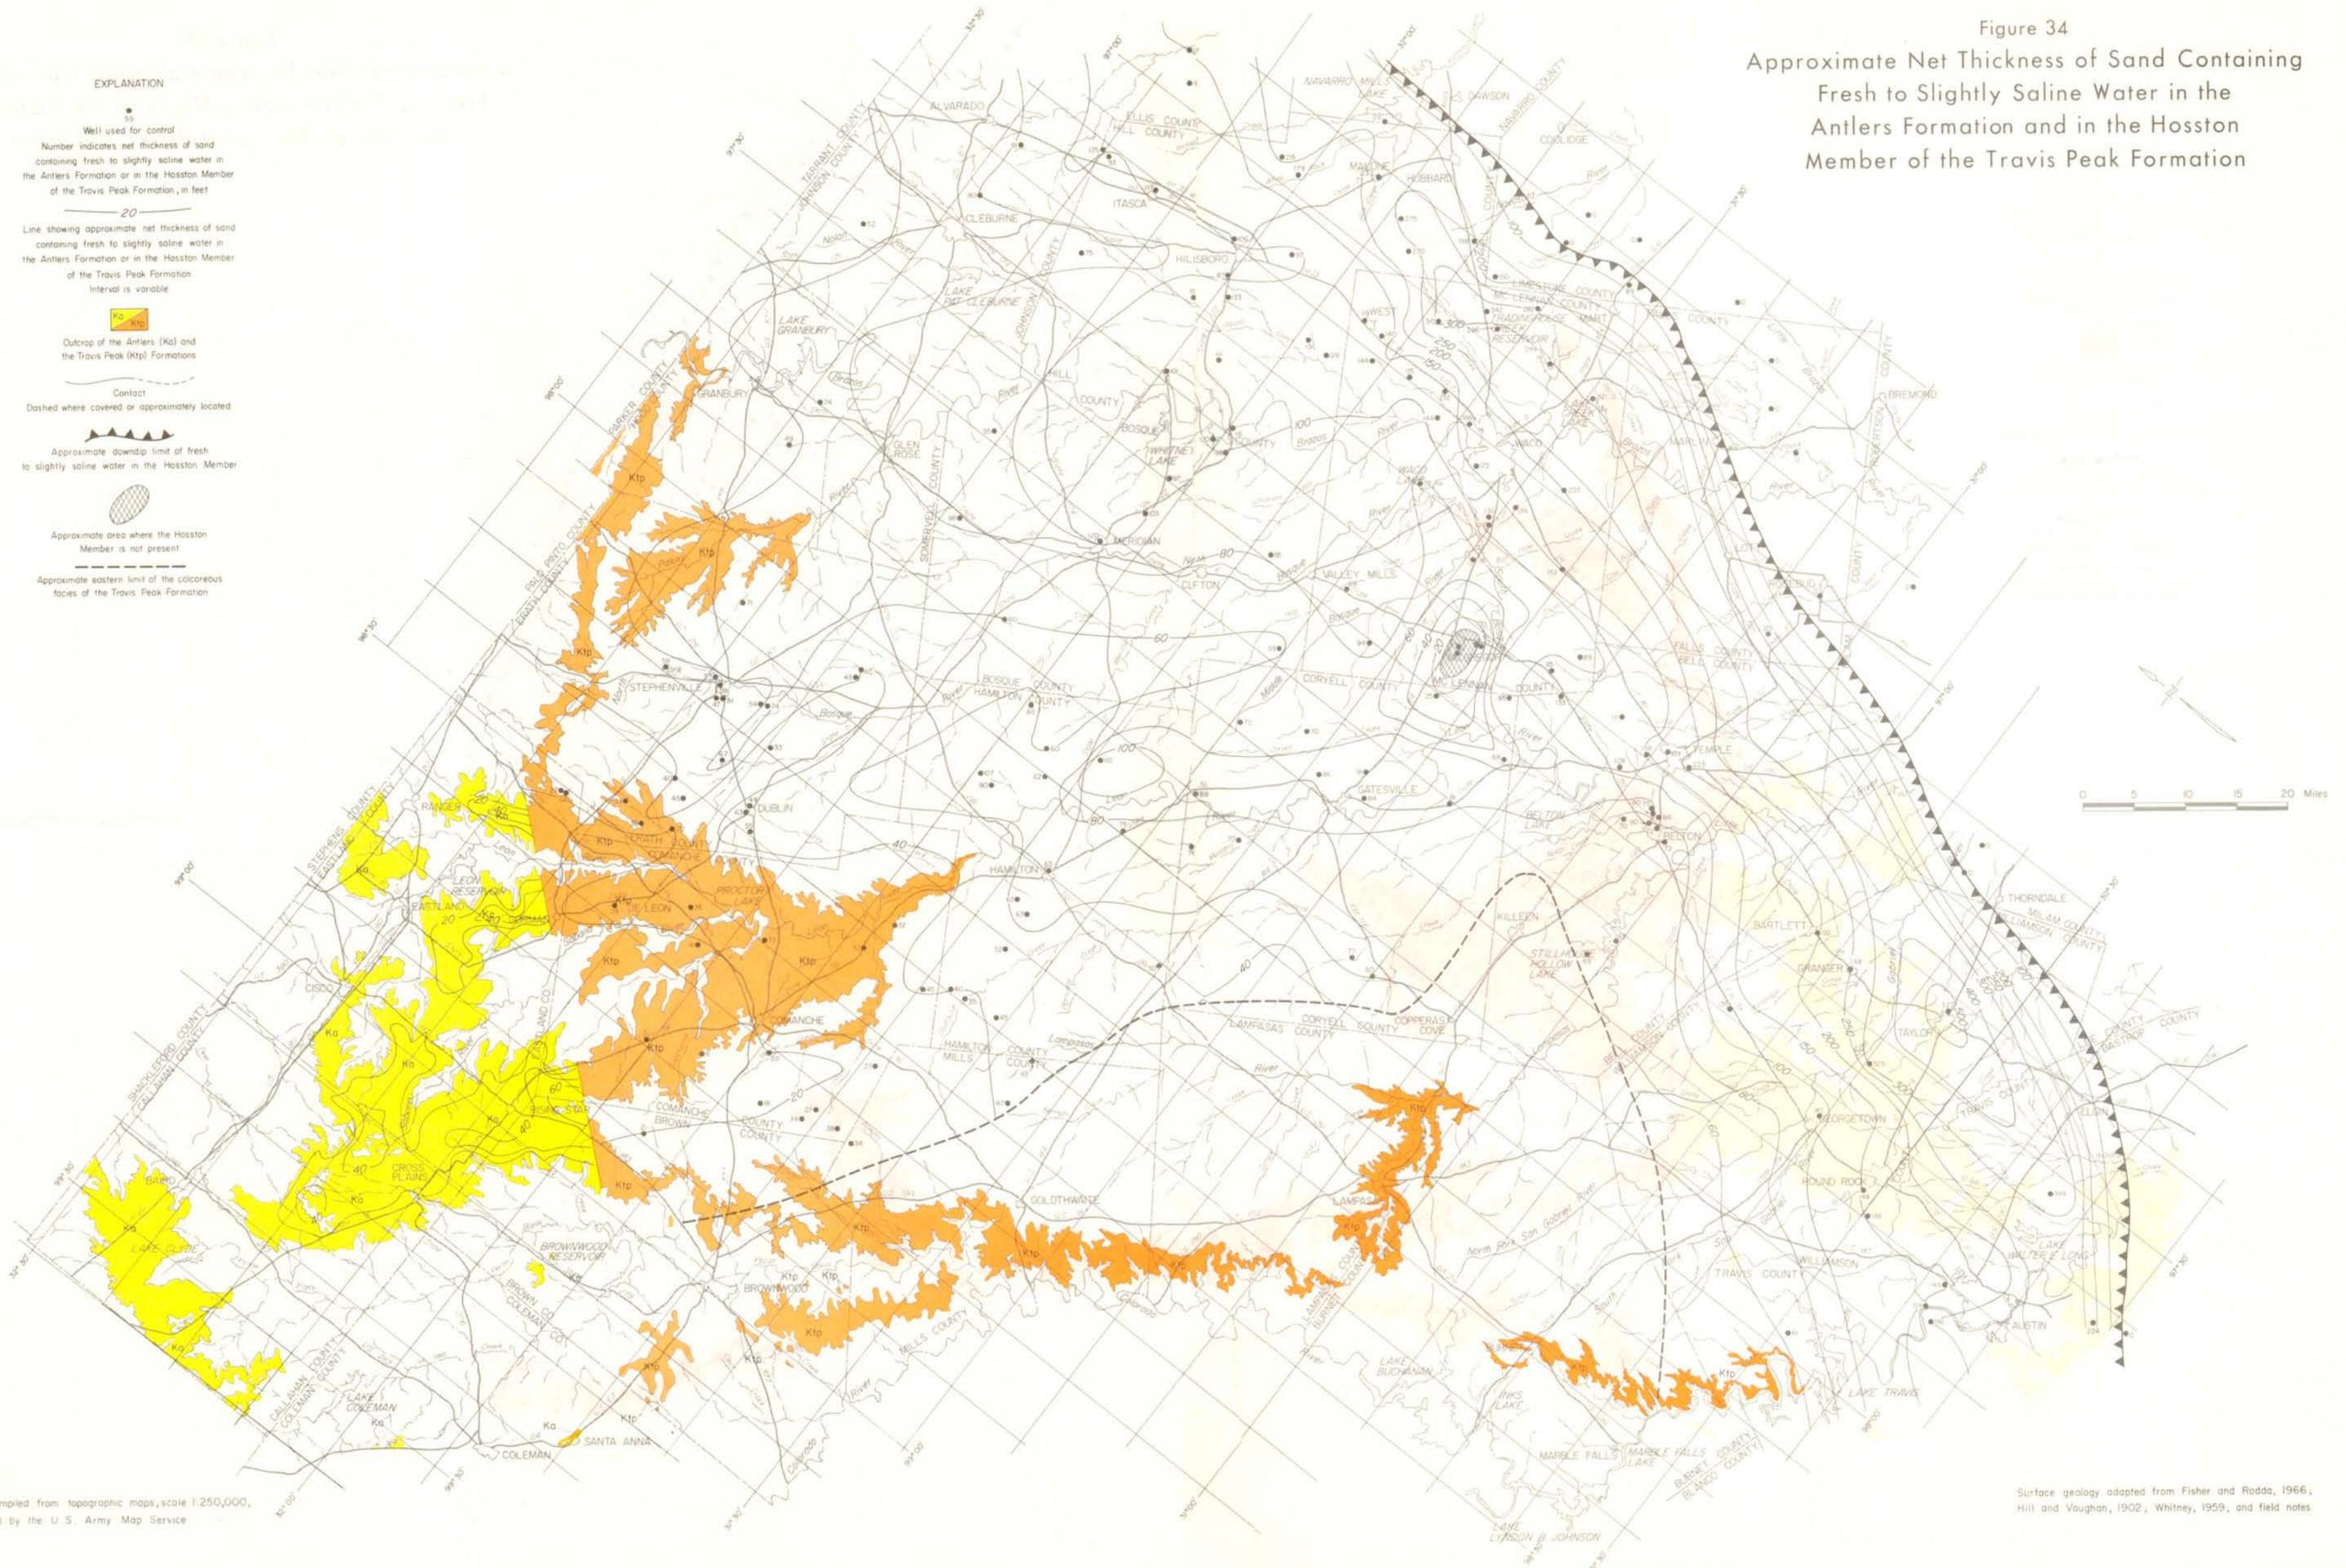

Figure 34  
 Approximate Net Thickness of Sand Containing  
 Fresh to Slightly Saline Water in the  
 Antlers Formation and in the Hosston  
 Member of the Travis Peak Formation

- EXPLANATION**
- 55  
Well used for control
  - Number indicates net thickness of sand containing fresh to slightly saline water in the Antlers Formation or in the Hosston Member of the Travis Peak Formation, in feet
  - 20 —  
Line showing approximate net thickness of sand containing fresh to slightly saline water in the Antlers Formation or in the Hosston Member of the Travis Peak Formation  
Interval is variable
  - Ka Ktp  
Outcrop of the Antlers (Ka) and the Travis Peak (Ktp) Formations
  - Contact  
Dashed where covered or approximately located
  - ▲  
Approximate downip limit of fresh to slightly saline water in the Hosston Member
  - Approximate area where the Hosston Member is not present
  - Approximate eastern limit of the calcareous facies of the Travis Peak Formation

Base compiled from topographic maps, scale 1:250,000, produced by the U. S. Army Map Service

Surface geology adapted from Fisher and Rodda, 1966; Hill and Vaughan, 1902; Whitney, 1959; and field notes
