**RECORDS OF WELLS, DRILLERS' LOGS, WATER-LEVEL
MEASUREMENTS, AND CHEMICAL ANALYSES OF
GROUND WATER IN CHAMBERS, LIBERTY, AND
MONTGOMERY COUNTIES, TEXAS, 1966-74**

INTRODUCTION

Reports describing the ground-water resources of Chambers, Liberty, and Montgomery Counties were prepared and published in 1971, 1968, and 1971, respectively. Wesselman and Aronow (1971), in describing the resources of Chambers County, tabulated records of wells, drillers' logs, water-level measurements, and chemical analyses gathered during the course of their study.

This report presents data collected since the investigation by Wesselman and Aronow (1971) and updates records tabulated by Anders and others (1968) in Liberty County, and by Popkin (1971) in Montgomery County. These records are being collected in cooperation with the Texas Water Development Board to evaluate the ground-water resources of the greater Houston-Galveston region.

Most of the chemical analyses presented in this report were determined in the laboratories of the U.S. Geological Survey, but some data were obtained from commercial analyses. Dissolved nitrite plus nitrate (N), dissolved orthophosphorous (P), dissolved solids (sum of constituents), hardness (Ca, Mg), percent sodium, residual sodium carbonate (RSC), and sodium adsorption ratio (SAR) were recalculated from commercial analyses to correspond to the U.S. Geological Survey reporting methods.

The English units used in this report may be converted to metric units by the following conversion factors:

FROM	MULTIPLY BY	TO OBTAIN
feet	0.3048	meters
gallons per minute	.06309	liters per second
inches	2.54	centimeters

WELL-NUMBERING SYSTEM

The well-numbering system used in this report was devised by the Texas Water Development Board for use throughout the State. Under this system, each 1-degree quadrangle is given a number consisting of two digits. These are the first two digits in the well number. Each 1-degree quadrangle is divided into 7½-minute quadrangles which are given two-digit numbers from 01 to 64. These are the third and fourth digits of the well number. Each 7½-minute quadrangle is divided into 2½-minute quadrangles which are given a single-digit number from 1 to 9. This is the fifth digit of the well number. Finally, each well within a 2½-minute quadrangle is given a two-digit number in the order in which it was inventoried, starting with 01. These are the last two digits of the well number.

On the well-location maps (Figures 1-3), only the last three digits of the well number are shown at each well location; the second two digits are shown in the northwest corner of each 7½-minute quadrangle; and the first two digits are shown by the large block numerals 60, 61, 64, and 65.

In addition to the seven-digit well number, a two-letter prefix is used to identify the county. The prefix for Chambers County is DH; for Liberty County, SB; and for Montgomery County, TS.

Table 1.--Records of Wells in Chambers County

Water levels : Reported water levels given in feet; measured water levels given in feet and tenths.
 Method of lift and type of power: E, electric; Sub, submersible; T, turbine; W, wind; N, none. Number indicates horsepower.
 Use of water : D, domestic; Ind, industrial; P, public supply; S, livestock; N, none.
 Water-bearing units : C, Chicot aquifer; CU, upper unit of Chicot aquifer; CL, lower unit of Chicot aquifer; E, Evangeline aquifer.

Table 5.--Records of Wells in Liberty County

Water level : Reported water levels given in feet; measured water levels given in feet and tenths.
 Method of lift and type of power: E, electric; G, gasoline, oil, butane, or diesel engine; Ng, natural gas; Sub, submersible; T, turbine. Number indicates horsepower.
 Use of water : D, domestic; Ind, industrial; Irr, irrigation; P, public supply.
 Water-bearing units : C, Chicot aquifer; E, Evangeline aquifer.

No.	Owner	Driller	Date completed	Depth of well (ft.)	Casing		Water-bearing unit	Altitude of land surface (ft.)	Water level		Method of lift	Use of water	Remarks

Table 9.--Records of Wells in Montgomery County

Water level : Reported water levels given in feet; measured water levels given in feet and tenths.
 Method of lift and type of power: Electric; G, gasoline, oil, butane, or diesel engine; Sub, submersible; T, turbine. Number indicates horsepower.
 Use of water : D, domestic; Ind, industrial; Irr, irrigation; N, none; P, public supply.
 Water-bearing units : C, Chicot aquifer; E, Evangeline aquifer; J, Jasper aquifer; JU, upper unit of Jasper aquifer.
