Project Name:	Old Alton Emergency Water Main				
Project Type:	Public Water System			**Project Phase:**	Acquisition Design & Construction

Project Description: A small subdivision of 21 homes in Denton County is facing an urgent need for a permanent water solution. Currently the homes rely on a private water system supported by two community wells, both of which have failed and are considered beyond repair. The system has multiple compliance issues with the TCEQ, including a history of failed biological testing, in which, during a bacteriological test, E. coli was detected. In addition, data showed PFOS level at 6.33 ng/L, among other problematic PFAS readings, and a high concentration of manganese.

Project Name:	New Groundwater Well and Goehmann Pump Station Expansion				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction
Project Description:	The City has a history of low pressures observed in the system. The City proposes a new groundwater well, ground storage tank, pump station expansion, and new transmission line in an effort to increase the minimum pressures observed in the system. This project is consistent with the state water plan to increase water supply.

Related PIFs:					
Project Name: New Groundwater Supply & Distribution System					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City of Bishop's West Bishop Pump Station currently supplies 40% groundwater and 60% purchased surface water from the South Texas Water Authority. The proposed project will rehabilitate existing Well No. 9 (currently out of service), construct a new well on City-owned property, and rehabilitate the West Bishop Pump Station. Including storage facilities, new storage capacity, and pump replacements to meet current demands, achieve water self-sufficiency, and ensure TCEQ compliance. The project will also include the development of a Water System Asset Management Plan to support long-term infrastructure management and capital planning.

Project Name:	Blanco Citywide Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The City of Blanco proposes to replace aging and deteriorated asbestos cement water mains along 7th Street, 9th Street, 12th Street, Main Street, and Pecan Street and to construct a new booster pump station to improve system performance. The existing AC mains are prone to leakage and failure, contributing to water loss, non-revenue water, and service interruptions. The proposed improvements will reduce real water loss, improve pressure stability and hydraulic performance, enhance operational reliability, support compliance with TCEQ system capacity requirements, and strengthen system resiliency during drought and emergency conditions. Funding for an asset management plan is also included.

Project Name: 2027 DWSRF Water Distribution Improvements

Project Type: Public Water System

Project Phase: Planning Design & Construction

Project Description: The City of Brownwood (City) aims to enhance the water distribution system by improving the existing elevated storage tanks (ESTs) and a high service Pump Station (PS). The ESTs are aging and need to be internally and externally repainted to preserve the useful service life. The Existing PS only has 2 of 3 total pump installed and is looking to install a third pump to increase the total operating capacity. The City is addressing water age issues by installing a control valve downstream of the Brown County Water Improvements District take point. The City also wants to include distribution line improvements as well as the rehabilitation of an existing pump station building and adding a new pump station building. An asset management plan will also be developed.

Project Name: City of Hondo Water System Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City proposes priority water system improvements identified through engineering analysis and capital planning to correct regulatory deficiencies, address localized storage and production capacity limitations within the Prison Pressure Plane (PPP), and improve overall distribution system reliability. The PPP is currently operating at or near TCEQ minimum storage requirements and lacks sufficient redundancy to maintain reliable service during peak demand or emergency conditions. The project includes construction of additional ground storage, pump station improvements, replacement of an existing well pump, installation of major transmission mains, and targeted distribution system looping and pipeline upgrades. Distribution improvements will eliminate dead-end mains, improve circulation, reduce water age, enhance fire flow capability, and strengthen pressure stability.

Project Name:	City of Carl's Corner Water Supply Well and Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Design & Construction

Project Description: The City's water well only produces ten gallons per minute to serve approximately 71 connections which is severely below the amount of the TCEQ requirement of 0.6 gpm per connection. The City desires to increase its water supply by constructing a new water well. Eight households are currently having water hauled to their homes due to lack of water distribution daily. Currently all water lines within the City's distribution system are no greater than two-inches (2"). Some of the water lines cross private property and/or lie outside City right-of-way. There are no fire hydrants within the City's current distribution system. The City desires to upgrade and replace its entire distribution system and valves while restoring fire suppression with the addition of fire hydrants throughout its water distribution system.

Project Name:	2027 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: Glen Rose has experienced significant water loss in certain areas of its water distribution system. One of the proposed projects is intended to reduce these losses by replacing existing water lines that have been identified as contributing to elevated loss percentages. The scope includes the replacement of three water lines, consisting of one asbestos-cement line and two steel lines. In addition, the project includes the replacement of existing ground storage tanks at Well Sites 2 and 6, as well as the replacement of existing standpipes at Well Sites 3 and 4. These improvements will address aging infrastructure, enhance system reliability and pressure maintenance, improve water quality, and ensure compliance with current regulatory and operational standards.

Project Name:	2027 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The City's aging water distribution system is currently experiencing an estimated 60 percent combined water loss. The proposed project will replace deteriorated pipelines, install system-wide AMI meters, integrate a SCADA monitoring system, rehabilitate storage and emergency well infrastructure, and implement an asset management plan. Improvements will significantly reduce water loss, improve system reliability and monitoring, resolve compliance issues with the TCEQ, implement an asset management plan, and enhance the delivery of safe drinking water.

Project Name: Raw Water Intake Facility					
Project Type: Public Water System				**Project Phase:** Design & Construction	
Project Description: This project involves the design and construction of the major structural, mechanical, and electrical components of a new Raw Water Intake Facility, and removal of the existing facility. This project also provides water loss mitigation by installing new pumps that are better matched to the City's distribution system demands, eliminating the need to flush treated water from the distribution system during very low demand periods.

Project Name: 2026 Drinking Water Improvements Project					
Project Type: Public Water System				**Project Phase:** P A D & Construction	
Project Description: The City's existing water well is undersized and failing and cannot be rehabilitated. A new well will need to be drilled to replace it. The City does not have a Water Utility Master Plan. The City's CCN extends over a large amount of undeveloped land. The Master Plan is needed to help them direct their efforts to serve these undeveloped areas. The City has many undersized galvanized pipes that are leaking and in need of repair. However, many of the existing pipes are not shown on maps and will need to be located to determine the size and length so that an estimated replacement cost can be established. It is believed that these lines are a significant contributor to the systems annual non-revenue loss.

Project Name: Spur-TX Water System Reliability & Loss Reduction Project 2026					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City of Spur's drinking water system is constrained by aging mains, limited valving, and single-source supply requiring large portions of the system being depressurized to locate and repair leaks. These conditions have led to loss of life, significant water loss, Boil Water Notices, fire-flow deficiencies, and costly service disruptions despite the city's staffs' best efforts. William and Wayne Consulting LLC have identified the replacement of approx. 18,000LF of main 4" and 6" line with improved water lines, valves, hydrants, and potential new service meters. This would Improve the existing condition of the current system and reduce significant financial and water waste.

Project Name:	Mackenzie Municipal Water Authority - Infrastructure Improvement				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The Mackenzie Municipal Water Authority (MMWA) proposes targeted infrastructure improvements to increase energy efficiency through green infrastructure, operational reliability, and system resiliency at its water treatment plant and pump stations. The project includes installation of interior LED lighting and exterior solar lighting, a solar bank at the water plant, new raw water, effluent, and backwash flow meters, permanent backup generators at the water treatment plant and pump stations, generator docking stations, a portable generator, and an effluent reuse system for plant irrigation. These improvements will enhance system monitoring, reduce energy consumption, improve emergency preparedness during power outages, and promote water conservation through beneficial reuse.

Related PIFs:					
Project Name: Nacogdoches Water System Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The proposed project consists of improvements to the City's drinking water system, including the replacement and/or rehabilitation of aging and deteriorated water distribution lines to reduce water loss, improve system reliability, and enhance water quality. Targeted water lines experience frequent leaks, elevated maintenance demands, and contribute to overall system inefficiencies.

Project Name:	2027 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: North Rural Water Supply Corporation (NRWSC) has experienced significant water loss due to main breaks and leaks in aging water lines within its distribution system. The primary 8-inch diameter water lines, originally installed in the 1960s, have exceeded their useful service life and are targeted for replacement to reduce water loss and improve system reliability. While NRWSC has proactively replaced portions of these lines as funding has allowed, assistance is needed to complete replacement of the remaining 8-inch lines within the East Pressure Plane.

Project Name:	Water System Improvements and Capacity Upgrades Project				
Project Type:	Public Water System			**Project Phase:**	Design & Construction

Project Description: The City's Public Water Supply System is within 13 connections of its minimum capacity requirements and is poised for growth given its location to the Harris-Fort Bend County Metropolitan Area. A recent study concluded that replacement of an existing elevated storage tower, replacement of undersized distribution lines, upgrades to service pumps and the addition of distribution lines will provide the needed capacity. The replacement of undersized distribution pipes will have a secondary benefit by reducing water loss because many of those lines are galvanized pipes which are prone to leaks and breaks. Additionally, the City completed an Assistance Action with the TCEQ in January 2025 for low water pressure in their distribution system.

Project Name:	Bay City Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The City of Bay City is seeking funding through the DWSRF to implement critical water system improvements that will enhance reliability, reduce water loss, increase storage capacity, and modernize operational controls. The proposed project includes a waterline extension to improve system looping and fire flow, rehabilitation of aging water mains, construction of a new 750,000-gallon ground storage tank, implementation of a water loss reduction program, and modernization of the City's SCADA system. Together, these improvements will strengthen the City's drinking water distribution system, improve operational efficiency, and support current and future growth while maintaining regulatory compliance.

Project Name:	Transmission and distribution improvements for supply sustainability				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: The proposed project includes construction of transmission and distribution line improvements, a booster pump station, and upgrades to an elevated storage tank to allow decommissioning of the Jackson pump station and associated groundwater wells. The project will convert the Jackson pressure plane from groundwater to treated surface water supplied by the existing treatment plant. The current groundwater supply has proven insufficient to reliably meet regulatory requirements and development of additional groundwater sources is limited. The proposed improvements will enhance regulatory compliance, improve system reliability and pressure stability, and provide a sustainable long-term water supply. Community will also request funds to pursue an asset management plan.

Project Name:	Planning, Acquisition, and Design Study for Regional Solution				
Project Type:	Public Water System			**Project Phase:**	Planning & Acquisition

Project Description: The City of Toyah is a disadvantaged community serving 30 connections that has experienced long-term noncompliance due to inadequate surface water treatment, lack of licensed operators, and aging infrastructure. The system is relying on hauled water from the City of Pecos, which is not financially sustainable. This Planning, Acquisition, and Design study will evaluate protecting the existing mountain spring at its source to prevent surface contamination and allow reclassification as groundwater requiring only chlorination. The study will include water rights clarification, source classification, infrastructure assessment, and environmental review. The goal is to develop a sustainable, low-operator-dependency regional solution in collaboration with the City of Balmorhea and Reeves County partners.

Project Name:	Critical Asbestos Water Line Replacement and WTP Improvements Project				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The city continues to have a high water loss rate, based on the water loss audit and water use survey. The city has numerous asbestos cement water lines in the older part of town that are nearly 60 years old and prone to ongoing cracks, breaks and substantial leaks. The city also has numerous TCEQ violations in the water distribution system and at the water treatment plant that include distribution system monitoring deficiencies, dead-end main flushing deficiencies, not keeping the distribution system watertight and free of excessive solids, inoperable equipment including the raw water pumps, submersible pump that transfers sludge to the filter backwash basin, insufficient raw water pump capacity, WTP has reached 90% of its treatment capacity, GST corrosion, leaks and manual controls, and failure to prevent discharge of WTP sludge residuals into or adjacent to any water of the state.

Related PIFs:					
Project Name:	Three Community WSC New Well, Tank and Distribution Line Replacement Project				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: The System has a history of water leaks and low pressure as a result of “piece meal” additions to the system over time. This is primarily due to undersized lines and old-line materials (brittle "grey pipe"). Additionally, the existing wells, service pumps and pressure tanks are not able to produce sufficient water to meet the current system demands, as required by the regulatory agency, TCEQ.

Project Name:	DeBerry Project 1- Hydraulic Modeling				
Project Type:	Public Water System			**Project Phase:**	Planning

Project Description: The aging pipelines in the service area require performance evaluation for timely maintenance. This project proposes hydraulic modeling to assess pipe upsizing and replacement needs. It may include GIS mapping, flow studies, and related activities. A final report will provide recommendations on pipeline upgrades to meet current and future demands.

Project Name:	DeBerry Project 4 - Water Distribution Line Replacement				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction
Project Description:	To address aging infrastructure and reduce water loss, a project is proposed to replace small-diameter water pipelines. It includes installing new pipelines, valves, and related components, covering half a mile of replacement. This project will be outside of TWDB Water System Improvements PIF as this will focus on a specific area.				

	Start Date	Completion Date	Phase Cost
Planning:			$112,453.00
Acquisition:			$195,000.00

Project Name: 2027 DWSRF Water System Improvements					
Project Type: Public Water System				**Project Phase:** P A D & Construction	
Project Description: The City of Ranger intends to replace; over 8 miles of existing distribution lines with new C900 PVC water lines, over 1,000 existing water meters with new AMI meters, and install new and replacement fire hydrants throughout the City. Additionally, the City intends to construct a new 500,000 gallon composite elevated storage tank to increase storage capacity as the current standpipes usable capacity is limited. The installation of a new groundwater well will increase overall supply but more importantly provide a redundant source of water. SCADA system improvements will also be incorporated along with the improvements above. An Asset Management Plan will also be provided to foster regular maintenance.

Project Name:	Hudspeth County WCID No. 1 Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Acquisition Design & Construction

Project Description: Hudspeth County Water Control and Improvement District No. 1(HCWC&ID No 1) currently relies on a 53-year-old, 30-mile transmission pipeline and a 52-year-old pump station from Van Horn, both of which experience recurring failures that disrupt water service to Sierra Blanca. To improve system reliability and comply with potential TCEQ requirements for an alternative water source, the District proposes developing a new groundwater well and implementing critical system upgrades. These improvements include SCADA installation, emergency backup generators, and rehabilitation or replacement of the existing pump station and transmission pipeline to reduce pipeline failures and ensure long-term operational resilience.

Project Name:	New RO WTP - DWSRF Project				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: The proposed project includes the use of reverse osmosis (RO) and granular activated carbon (GAC) technologies to prepare for the new PFAS limits initiated by EPA in Spring 2024. Given the introduction of PFAS into source waters from wastewater effluent discharge, JCSUD is implementing RO and GAC technologies to be prepared to reduce emerging contaminants from its source water. The proposed project is looking for DWSRF funding in the event that EC funding for construction is not available. The proposed project also includes the development of an asset management plan.

Related PIFs:					
Project Name:	Jones River Bend Water Treatment and Distribution				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: Treated water will flow from Beeville's pressurized pipeline through a pressure reducing valve and RPZ backflow prevention valve into a 2-inch PVC pipeline to a vault near the JRBWSC distribution system. The vault will house Beeville's wholesale water meter with cut-off valves, and potentially a pressure reducing valve on the JRBWSC side. The project will include customer meters and, if funding allows, new service lines throughout the JRBWSC area.

	Start Date	Completion Date	Phase Cost
Planning:			$220,000.00
Acquisition:		03/31/2027	$10,000.00

Project Name:	2027 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: This project includes the replacement of most of the City of Santa Anna's distribution system including the replacement of all water meters, replacement of 99,645 LF of water lines ranging in size from 3/4 inch to 8 inch. The City is also planning replace all meters within their distribution system with meters that are compatible with either AMR or AMI network systems. The City also wants to increase their storage capacity by including a 200,000-gallon ground storage tank that will require the acquisition of land. This project also includes the development of an asset management plan.

	Start Date	Completion Date	Phase Cost

Project Name:	SWATS RO WTP Expansion				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: The proposed project includes the use of reverse osmosis (RO) and granular activated carbon (GAC) technologies to prepare for the new PFAS limits initiated by EPA in Spring 2024. Given the introduction of PFAS into source waters from wastewater effluent discharge, JCSUD is implementing RO and GAC technologies to be prepared to reduce emerging contaminants from its source water. This project is focused on funding an expansion of the existing SWATS WTP that JCSUD has contracted treatment capacity from. The proposed project also includes the development of an asset management plan.

Project Description: The City of Millsap is actively pursuing acquisition of Millsap WSC and intends to own and operate all existing WSC assets, including the CCN. The City and Millsap WSC are currently coordinating to prepare and submit the necessary application to the Public Utility Commission of Texas (PUC). This PIF is being submitted in partnership with Millsap WSC in the event the WSC becomes part of the City prior to funding. Current Millsap WSC rates are expected to remain the same for the City of Millsap. City of Millsap/Millsap WSC proposes to replace the existing ground storage tank at Pump Station No. 1 with a new elevated storage tank and upsize an existing waterline along Young Road to improve and maintain adequate pressures throughout the distribution system.

Project Name:	Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The proposed project consists of improvements to the City's drinking water system, including the water meter replacements and the replacement and/or rehabilitation of aging and deteriorated water distribution lines to reduce water loss, improve system reliability, and enhance water quality. Targeted water lines experience frequent leaks, elevated maintenance demands, and contribute to overall system inefficiencies. Existing water meters are manual read and have documented inaccuracies reported. The project includes the development of an asset management plan.

Project Name:	2027 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The City desires to upgrade/replace the existing elevated storage tank and replace the existing 8" Asbestos Cement transmission supply line that is the only source of water. The line experiences frequent breaks that shut off water supply to the City. The City also desires to replace all existing AC water lines within the distribution system and replace the existing EST that was constructed in 1927. An asset management plan will also be developed.

Project Name: Port Mansfield PUD Water System Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: This project modernizes the community's water infrastructure through the installation of a 250,000-300,000-gallon elevated storage tank, smart meters, and comprehensive pump room and pipe rehabilitations. Central to these upgrades is the implementation of a formal Asset Management Plan through the TWDB contract, ensuring that these new investments are systematically maintained, tracked, and funded for their entire service life.

Project Name:	2027 DWSRF Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The City of Hamlin aims to enhance their water distribution system by improving its existing distribution lines, valves, and hydrants. The distribution lines are aging, dilapidated, and need to be replaced. Additionally, the City is addressing additional water loss issues and water use efficiency by replacing all aging mechanical meters on the distribution system with AMI meters. An asset management plan and water conservation plan is included.

Project Name:	Secondary Colorado 30-Inch Raw Water Line Emergency Repairs				
Project Type:	Public Water System			**Project Phase:**	Construction

Project Description: The City of Pflugerville declared a water shortage emergency on March 4, 2026, due to a break in the existing 15-mile 30-inch diameter raw water pipeline that transports water from the Colorado River to Lake Pflugerville. The City instituted Stage 3 water restrictions and is in the process of installing a temporary raw water pipe system to bypass the failed section. Approximately 320 linear feet of 24" HDPE piping and specialized fittings will be installed to bring the 30" line back into service while the failed segment is being repaired. This project includes materials and labor associated with the leak investigation and dewatering effort, the installation of the 24" HDPE bypass system, replacement of the failed segment of the existing 30" line, testing and reconnection of the cathodic protection system for this segment, environmental controls required to protect the creek, and restoration and installation of erosion controls of the disturbed areas.

Project Name:	City of Primera Water RO Water Treatment Plant and Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: The City of Primera proposes to develop a new groundwater supply and reverse osmosis water treatment plant to improve water system reliability, provide an alternate water source, and ensure long-term compliance with state and federal drinking water standards. The project will include groundwater exploration, test well drilling, production well construction, environmental review and clearance, permitting, planning, hydraulic modeling of the existing water distribution system, design, and construction of a new reverse osmosis treatment facility and associated infrastructure. The project will also include preparation and calibration of a hydraulic model of the city's existing water distribution system to evaluate system capacity, pressures, storage, and fire flow availability under current and future conditions. The model will be used to optimize integration of the new groundwater supply and treatment facility, identify system improvements, and ensure reliable delivery of treated potable water to all customers. An asset management plan will be completed as part of this project.

Project Name: City of Cameron Drinking Water System Improvements					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City of Cameron proposes to construct a new 500,000-gallon elevated storage tank and approximately 9,500 linear feet of 12-inch water main, including system interconnections, valves, and fire hydrants, to correct a critical operational deficiency within the water distribution system. The City currently lacks adequate redundancy to remove an existing elevated storage tank from service for inspection or maintenance without risking widespread pressure loss and service interruptions. The proposed improvements will provide necessary storage redundancy, reduce water loss, improve system isolation and looping, enhance pressure stability and fire flow capability, and strengthen overall system resiliency in accordance with TCEQ design criteria. Funding is included for development of an asset management plan.

Project Name:	City of Overton Water System Improvements for New Water Well				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction
Project Description:	The City of Overton needs to construction a new water well and plant in order to meet the existing demand and provide for future demand. The city plans to construct a new water well complete with a stand-alone water plant, including ground storage tank, disinfection system, and high service pumps in order to meet system demand and maintain the existing infrastructure. The existing water system has deteriorated over time and results in excessive maintenance and water loss.

Project Name:	City of Marble Falls Drinking Water System Improvements				
Project Type:	Public Water System			**Project Phase:**	Planning Design & Construction

Project Description: The City of Marble Falls proposes to replace deteriorated asbestos cement (AC) water mains and upgrade undersized 2-inch residential waterlines to 6-inch and 8-inch PVC to address pressure deficiencies, improve fire flow capacity, reduce water loss, and enhance system reliability. Improvements include waterline replacements on Sunset Drive, along Pecan Valley Drive, and along Avenue J; installation of new valves and associated appurtenances; service reconnections; and proper abandonment of existing AC mains. The project will reduce water loss, eliminate hydraulic restrictions, and improve the reliability and resiliency of potable water service to an eligible disadvantaged community.

Project Name: Rio Grande City Water System Improvements Phase III					
Project Type: Public Water System				**Project Phase:** Planning Design & Construction	
Project Description: The City of Rio Grande City proposes critical water system improvements to address increase in daily demand, severe low pressure concerns, aging infrastructure, and operational safety hazards. The project includes replacement of the existing 8 -inch asbestos cement (AC) water line with a 12-inch PVC water main to adequately serve the east side of town, installation of isolation valves systemwide to improve maintenance and reduce contamination risks, construction of a 1.0-MGD elevated storage tank in Las Lomas (Alto Vista) to stabilize system pressures, and essential upgrades at the water treatment plant, including rehabilitation of treatment processes, pump replacements, SCADA modernization, and restoration of redundant capacity.

Project Name:	Surface Water Treatment Plant Expansion				
Project Type:	Public Water System			**Project Phase:**	P A D & Construction

Project Description: NORTH SYSTEM -Project includes property acquisition and construction of a relocated standpipe from the Chita System. SCADA integration to improve distribution storage and system reliability. SOUTH SYSTEM -Improvements include restoration of the existing raw water intake pipeline, removal of an undersized intake line, and installation of an additional intake pump to increase raw water supply. Construction of new treatment facilities, installation of additional filtration and transfer pumping, chemical system modifications, electrical upgrades, SCADA integration, and construction of a new clearwell. PINECREST PLANT - Project includes replacement of existing ground storage tanks, electrical building upgrades, installation of standby power, air system improvements, and replacement of pump motors. LAKE L PLANT -Improvements include installation of standby power, construction of a relocated standpipe from the Chita System, and SCADA system upgrades. CHITA SYSTEM -Construction of a new distribution interconnection between the South and Chita systems to improve redundancy and operational flexibility. Improvements include pump house repairs, electrical upgrades, filtration and piping improvements, SCADA upgrades, and construction of a new elevated storage tank. Existing standpipes will be removed and prepared for relocation elsewhere within the System.

Project Description: Water supply improvements includes two remote water wells with approximately 3,700 LF of 4" raw water main. Green sand pressure filters are proposed to filter elevated oxidized manganese. The CR 338 water main improvements include approximately 8,000 LF of 4" water main to replace old, frequently leaking, undersized water mains that are contributing a significant amount of water loss in the WSC's total water loss amounts. The WSC also intends to replace the existing water meters.

Project Name: Lubbock Area Regionalization Study					
Project Type: Public Water System				**Project Phase:** Planning & Acquisition	

Project Description: This project evaluates and advances the regionalization of public water systems throughout Lubbock County through strategic interconnections, shared infrastructure, and coordinated system management. The goal is to enhance long-term water supply reliability, improve operational efficiency, and strengthen financial sustainability for participating utilities. Regionalization would allow smaller municipal systems and water supply corporations to benefit from shared treatment capacity, bulk water purchasing, consolidated administrative functions, and regional emergency response planning. By interconnecting systems, participating utilities can reduce redundancy, improve redundancy during drought or equipment failure, and ensure compliance with state and federal regulatory standards. The project also supports improved asset management planning. Regional collaboration enhances drought resilience, strengthens infrastructure redundancy, and promotes sustainable groundwater management within the county.
