New Ulm WSC

DWSRF GREEN PROJECT RESERVE BUSINESS CASE EVALUATION

STATE FISCAL YEAR 2013 INTENDED USE PLAN

PROJECT NUMBER 62571

COMMITMENT DATE: January 31, 2013
DATE OF LOAN CLOSING: May 10, 2013

GREEN ESTIMATE AT CLOSING: $500,716.00

Subsidy awarded for Green components, (if any)
The Federal Appropriation Law for the current fiscal year Clean Water and Drinking Water State Revolving Fund programs contains the Green Project Reserve (GPR) requirement. The following Green Project Information Worksheets have been developed to assist TWDB Staff in verifying eligibility of potential GPR projects.

TWDB-0163
Revised 12/2/2010
PART I - GREEN PROJECT INFORMATION SUMMARY

Check all that apply and complete applicable worksheets:

Categorically Eligible

☐ Green Infrastructure $ __________________________
☐ Water Efficiency $ __________________________
☐ Energy Efficiency $ __________________________
☐ Environmentally Innovative $ __________________________

Business Case Eligible

☐ Green Infrastructure $ __________________________
☐ Water Efficiency $ 6,400.00 __________________________
☐ Energy Efficiency $ 2,400.00 __________________________
☐ Environmentally Innovative $ __________________________

Total Requested Green Amount $ 374,651.20 __________________________

Total Requested Funding Amount $ 535,216.00 __________________________

Type of Funding Requested:

☒ PAD (Planning, Acquisition, Design)
☒ C (Construction)

Completed by:

Name: Lynette Frnka
Title: Manager
Signature: [Signature]
Date: 10/8/2012

TWDB-0163
Revised 12/2/2010
PART III - BUSINESS CASE ELIGIBLE

Complete this worksheet for projects being considered for the Green Project Reserve (GPR) as business case eligible. Business case eligible projects or project components are described in the following sections of the EPA GPR guidance (TWDB-0161):

- Green Infrastructure: Part B, Section 1.4
- Water Efficiency: Part B, Section 2.4 and 2.5
- Energy Efficiency: Part B, Section 3.4 and 3.5
- Environmentally Innovative: Part B, Section 4.4 and 4.5

Information provided on this worksheet should be of sufficient detail and should clearly demonstrate that the proposed improvements are consistent with EPA and TWDB GPR guidance for business case eligible projects. Refer to Information on Completing Worksheets for additional information.

Section 1 - General Project Information

Applicant: New Ulm Water Supply Corporation  PIF #: 9806

Project Name: Water Line Replacement

Contact Name: Lynette Frnka

Contact Phone and e-mail: 979-992-3699  nuwsc@industryinet.com

Total Project Cost: $535,216.00  Green Amount: $374,651.20
Brief Overall Project Description:

This project will replace 12,400 feet of deteriorating and undersized distribution lines to reduce the amount of water loss due to leaks and line breakage, reduce costs associated with materials and man hours to make repairs, reduce energy consumption by having to pump and treat less water, and most importantly is to conserve on the amount of water taken out of the ground.

Section 2 – Green Infrastructure

Certain green infrastructure improvements may be considered business case eligible for the GPR. Refer to EPA and TWDB GPR guidance for a complete list and description of business case eligible GPR Projects. Provide reference to the applicable sections of the EPA GPR guidance (TWDB-0161) that demonstrate GPR eligibility. Provide a detailed description of the proposed green infrastructure improvements of sufficient detail that clearly demonstrates that the proposed improvements are consistent with EPA GPR guidance (TWDB-0161).

Guidance Reference:
Section 3 - Water Efficiency
Certain water efficiency improvements may be considered business case eligible for the GPR. Refer to EPA and TWDB GPR guidance for a complete list and description of business case eligible GPR Projects. For all water efficiency business case eligible projects Section 3.1 must be completed. A common water efficiency project that may be considered business case eligible is water line replacements to address water loss. For this type of project complete Section 3.2 of the worksheet. For any other water efficiency improvement being considered for business case eligibility, complete Section 3.3.

Section 3.1 - System and Water Loss Information
Section 3.1 is required for all water efficiency business case eligible projects. Attach a copy of most recent Water Audit, if available. Otherwise, complete and attach Water Audit Worksheet or provide water audit data in a similar format. Additional information on water loss and water audits as well as a copy of the Water Audit Worksheet is available at: http://www.twdb.state.tx.us/assistance/conservation/Municipal/Water_Audit/wald.asp

Reference and attach water loss audit and/or any other completed planning or engineering studies:
- [ ] 2010 Water Audit
- [X] 2011 Water Use Survey
- [ ] Report on first 3 quarters of 2012

Section 3.2 - Water Line Replacement
Proposed pipe to be replaced:

<table>
<thead>
<tr>
<th>Length (LF)</th>
<th>Existing Pipe</th>
<th>Proposed Pipe</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>Material</td>
<td>Age (yr)</td>
</tr>
<tr>
<td>9,400</td>
<td>PVC</td>
<td>40+</td>
</tr>
<tr>
<td>3,000</td>
<td>PVC</td>
<td>40+</td>
</tr>
</tbody>
</table>

Percent of distribution lines being replaced: Approximately 25%

Number of breaks/leaks/repairs recorded in past 24 months for areas being replaced: 12

Estimated water loss from pipe being replaced (provide calculations on following page): 1.6 MG

Estimated annual water savings (provide calculations on following page): 1.6 MG

Estimated annual cost savings (provide calculations on following page): $8,800.00

TWDB-0163
Revised 12/2/2010
Provide detailed description of the propose improvements and provide supporting calculations. Description should include a description of the methodology used to select pipes for replacement (attach additional pages if necessary):

"See Attached"

Business Plan attached to original application.

Income lost on the 1.6 million gallons of water loss figured at $4.00/1,000 gallons is $6,400.00. This is a substantial amount of revenue to a very small system such as ours.

Green amount associated with water line replacement: $ 374,651.20

TWDB-0163
Revised 12/2/2010
List any other energy efficiency improvements to pumping facility (VFDs, lighting, SCADA, etc.):

<table>

<td></td>
<td></td>
</tr>
</tbody>
</table>

Total:  

Provide a detailed description on the following page(s) of the proposed energy efficiency improvements. Information should be specific to the equipment being proposed and calculations should be provided demonstrating substantial energy and financial savings.

Detailed Description (attach additional pages if necessary):

The only energy efficiency involved with this project is the amount of electrical energy Consumption saved by reducing our water loss and possibly extending the life of the wellc and booster pumps by not having to pump millions of gallons of water which is lost.

Green amount associated with pumping facilities improvements: $2,400.00  
(Attach detailed cost estimate if necessary)

BUSINESS CASE
WATER LINE REPLACEMENT

NEW ULM WATER SUPPLY CORPORATION
P. O. BOX 73
1195 WALNUT STREET
NEW ULM, TEXAS 78950

AUGUST 27, 2012
1. **EXECUTIVE SUMMARY**

This Water Line Replacement Project consisting of replacing 12,400 feet of deteriorating and undersized distribution water lines to reduce the amount of water loss per year.

2. **GENERAL PROJECT INFORMATION**

There are 9,400 feet of 2" PVC lines that were installed in the late 1960’s and during the 1970’s that are to be replaced with 6" C900 piping. There are an additional 3,000 feet of 2" PVC lines that were installed in the late 1960”s that are to be replaced with 4" PVC piping. The system water loss in 2011 almost doubled the loss for each of the previous four (4) years. The water loss for 2011 was in excess of 2.25 million gallons, which represents a 14% of the total production and 69% of total system water loss.

The loan amount for this project = $535,216.00

Water savings (green) portion of the loan = 70%

Estimated average water savings = 1.6 million gallons (MG) per year

3. **BACKGROUND**

The water system includes approximately 15 miles of PVC distribution lines ranging from 2” to 6” in diameter. The treatment plant processed an average of 43.5 thousand gallons of water per day in 2011 and an average of 31 thousand gallons per day for each of the previous four (4) years. In 2011 there were six (6) repairs made to the same 200 ft. section of one of the distribution lines that is targeted to be replaced. The line that is to be replaced with the 4” piping is the one that has had the most repairs in the last several years. The lines that are due to be replaced with 6” lines are very undersized due to the number of connections that have been added during the last 30+ years.
4. **CALCULATED WATER LOSS**

The treatment plant processed 15.9 million gallons of water in 2011 (MGY) and there were 13.6 million gallons (MG) billed/consumed = 2.3 million gallons (MG) water loss. Out of the 2.3 MG there were 700 thousand gallons used for flushing and fire, which equals 1.6 million gallons (MG) water loss due to leaking and broken water lines = approximately 69%. Our water loss greatly increased in 2011 over the previous years.

5. **CONCLUSION**

By replacing the 12,400 feet of aging water line, the system anticipates greatly decreasing the amount of water loss and providing more uniform pressure on the outer most parts of the distribution lines. A conservative cost to pump/treat water of $1.50 per 1,000 gallons would be a cost savings of $2400.00 per year. Additional benefits would be a reduction in the cost of repair and maintenance and the down time for water service to our customers.
# A. Water Utility General Information

1. Water Utility Name: New Ulm WSC

2. Contact:
   2a. Name
   2b. Telephone #
   2c. Email Address

3. Reporting Period: From 1/1/2010 To 12/31/2010

4. Source Water Utilization, percentage: Surface Water 0.00 % Ground Water 100.0 %

5. Population Served:
   5a. Retail Population Served 300
   5b. Wholesale Population Served 0

6. Utility's Length of Main Lines, miles 10.00

7. Number of Wholesale Connections Served 0

8. Number of Retail Service Connections Served 155

9. Service Connection Density 15.50  (Number of retail service connections / miles of main lines)

10. Average Yearly System Operating Pressure (psi) 60.00

11. Volume Units of Measure: Gallons

# B. System Input Volume

12. Produced Water 10,288,610 gallons

13. Production Meter Accuracy (enter percentage) 99.00 %

14. Corrected Input Volume 10,392,535 gallons

15. Water Imported 0 gallons

16. Water Exported 0 gallons

17. **System Input Volume** 10,392,535 gallons  (Corrected input volume, plus imported water, minus exported water)

# C. Authorized Consumption

18. Billed Metered 8,527,320 gallons

19. Billed Unmetered 0 gallons

20. Unbilled Metered 722,327 gallons

21. Unbilled Unmetered 129,907 gallons

22. **Total Authorized Consumption** 9,379,554 gallons
### D. Water Losses

23. **Water Losses**  
   (Line 17 minus Line 22)  
   ____________  1,012,982 gallons

### E. Apparent Losses
