Texas Water Development Board rules governing the Drinking Water State Revolving Fund program (Texas Administrative Code, Title 31, Part 10, Chapter 371) may be accessed online at https://texas-sos.appianportalsgov.com/rules-and-meetings?chapter=371&interface=VIEW_TAC&part=10&title=31

Drinking Water State Revolving Fund Acronyms

ACS	American Community Survey
AIS	American Iron & Steel
AMHI	Annual Median Household Income
BABA	Build America, Buy America Act, 2021
CCL	Contaminant Candidate List
CWSRF	Clean Water State Revolving Fund
DWSRF	Drinking Water State Revolving Fund
EC	Emerging Contaminants
EPA	Environmental Protection Agency
FFY	Federal Fiscal Year
FMT	Financial, Managerial, and Technical
IIJA	Infrastructure Investment and Jobs Act, 2021
IUP	Intended Use Plan
NEPA	National Environmental Policy Act
NPDWR	National Primary Drinking Water Regulation
PFAS	Perfluoroalkyl and Polyfluoroalkyl Substances
PIF	Project Information Form
PPL	Project Priority List
PWS	Public Water System
SDWA	Safe Drinking Water Act
SFY	State Fiscal Year
SRF	State Revolving Fund
TCEQ	Texas Commission on Environmental Quality
TWDB	Texas Water Development Board
TxDSHS	Texas Department of State Health Services

I. Overview

The Infrastructure Investment and Jobs Act, 2021, Pub. L. 117-58 (IIJA) appropriated capitalization grant funds for Federal Fiscal Years (FFY) 2022 to 2026 to reduce exposure to perfluoroalkyl and polyfluoroalkyl substances (PFAS) and other emerging contaminants (EC) through drinking water and to help address discharges through wastewater and, potentially, nonpoint sources.

This Intended Use Plan (IUP) covers the DWSRF capitalization grant funds allocated to Texas from FFY 2024 appropriations in the amount of \$60,914,000, plus the reallocation of FFY 2022 appropriations in the amount of \$140,000, and the reallocation of FFY 2023 appropriations in the amount of \$1,742,000, for a total amount of \$62,796,000. The appropriations require the entire amount allocated to project funding be provided as additional subsidization, which will be in the form of principal forgiveness. A total of \$59,568,889 is available for projects under this IUP as principal forgiveness. Per the IIJA, not less than 25% of the project funds must be provided to disadvantaged communities or public water systems serving fewer than 25,000 people.

For a project or activity to be eligible for funding under this appropriation, it must be otherwise DWSRF eligible and the primary purpose must be to address emerging contaminants in drinking water. The focus will be on projects addressing PFAS, however, the program may fund as a lower priority projects for any contaminant in any of the U.S. Environmental Protection Agency's (EPA) Contaminant Candidate Lists (CCL).

If EPA has promulgated a National Primary Drinking Water Regulation (NPDWR) for a contaminant, then a project whose primary purpose is to address that contaminant is not eligible for funding under this appropriation, with the exception of PFAS. For example, a project for which the primary purpose is to address arsenic or nitrate in drinking water is not eligible because arsenic and nitrate are regulated under the NPDWRs. (Note: A project to address arsenic or nitrate is eligible and prioritized under the Texas Water Development Board's (TWDB) regular DWSRF program.)

EPA established a NPDWR for six PFAS on April 10, 2024. PFAS-focused projects are still eligible for funding under this appropriation and are prioritized.

This DWSRF-EC IUP supports the EPA's initiative Pillar 1: Clean Air, Land, and Water for Every American. By working with entities to address emerging contaminants in water and provide safe water supplies, the program supports the EPA's mission on protecting human health and the environment.

II. Background

In 1996 Congress passed federal amendments to the SDWA that established the DWSRF program. The TWDB is authorized by state law to administer this program for Texas.

The TWDB is the financing agency for the DWSRF and has a contractual relationship with the state's primacy agency, the Texas Commission on Environmental Quality (TCEQ), to perform DWSRF activities. TCEQ performs DWSRF activities that include

rating proposed projects, state program management, small systems technical assistance, assessments for ground water sources, source water technical assistance, sanitary surveys, complaint investigations, enforcement activities, disaster assistance, and implementation of the State of Texas approved Capacity Development Strategy.

The IIJA appropriated supplemental capitalization grant funds for Federal Fiscal Years (FFY) 2022 to 2026 for general activities, lead service line replacement, and emerging contaminants.

The IIJA also included funds for the Emerging Contaminants in Small or Disadvantaged Communities (EC-SDC) grant program, which focuses on addressing emerging contaminants, including PFAS, in drinking water served by public water systems in small communities (population less than 10,000 and unable to incur debt sufficient to finance the project) or disadvantaged communities. The EC-SDC program is intended to complement the DWSRF-EC program funding.

On April 10, 2024, the EPA issued drinking water standards for PFAS. This rule sets limits for five individual PFAS: PFOA, PFOS, PFNA, PFHxS, and HFPO-DA (also known as “GenX Chemicals”). The rule also sets a limit for mixtures of any two or more of four PFAS: PFNA, PFHxS, PFBS, and “GenX chemicals.” Projects focused on addressing PFAS are eligible for this funding.

III. Projects to Fund

A. Eligible Applicants

Applicants eligible to apply for assistance are:

- Existing community Public Water Systems (PWSs) including political subdivisions, nonprofit water supply corporations and privately-owned community water systems
- New community PWSs, created to address unsafe drinking water provided by individual (i.e. privately-owned) wells
- Non-profit, non-community public water systems
- State agencies

B. Eligible and Ineligible Use of Funds

The primary purpose must be to address emerging contaminants in drinking water with a focus on perfluoroalkyl and polyfluoroalkyl substances (PFAS). Projects that address any contaminant listed on any of EPA’s Contaminant Candidate Lists (CCL) are eligible. See EPA webpage for details on the drinking water contaminants on the CCL - <https://www.epa.gov/ccl>

1. Examples of **eligible** project costs include planning, acquisition, design, and construction of projects for:
 - Emerging contaminants costs associated with the construction of a new treatment facility or upgrade to an existing treatment facility that addresses emerging contaminants. This will be limited to only those costs directly related

to treatment or removal of emerging contaminants. If a new treatment facility is proposed, processes not directly related to emerging contaminants could be deemed ineligible for funding or only partially funded under this program.

- Development of a new source (i.e., new/replacement well or intake for a public water system) that addresses an emerging contaminant issue.
- Consolidation with another water system that does not have emerging contaminants present or has removal capability.
- Costs for planning and design and associated pre-project costs.
- Infrastructure related to pilot testing for treatment alternatives.
- Creation of a new community water system to address unsafe drinking water provided by individual (i.e., privately-owned) wells or surface water sources.

All projects funded through the DWSRF must be consistent with the most recently adopted TWDB State Water Plan.

2. Examples of **ineligible** project costs include:

- If the primary purpose is not to address emerging contaminants in drinking water.
- Related costs in an emerging contaminant project that do not directly address treatment or removal of the contaminant. This includes parts of the project involving other treatment processes, collection and distribution, or other activities.
- If the primary purpose is to address a contaminant that is regulated under EPA's National Primary Drinking Water Regulation (NPDWR), with the exception of PFAS.
- Routine or compliance water monitoring.
- Identifying sources of emerging contaminants.

IV. Significant Program Changes

Significant program changes from the previous year's IUP are highlighted below.

1. The project prioritization scoring criteria has been updated to place more priority on projects in which the system has identified PFAs exceeding the Maximum Contaminant Limits (MCLs) of the NPDWR and the project includes treatment and removal of the PFAs in finished water that is used for public water supply.
2. Eligible project expenses must be directly related to emerging contaminants. Project components supporting eligible expenses will be allowed at a percentage equal to the eligible costs divided by the total proposed project cost. For example, if a new water treatment plant is proposed, the eligible project costs under the DWSRF-EC program would include the treatment process (e.g. GAC filter), and support components (e.g., electrical/SCADA or piping improvements) would be eligible at a percentage of their total cost. Some components (e.g., booster pumps or storage tanks) may be deemed ineligible under the DWSRF-EC program, requiring the applicant to identify another funding source for that component.
3. Additional funding for projects listed on this IUP, and previous DWSRF-EC IUPs, is available utilizing the Emerging Contaminants for Small or Disadvantaged Systems (EC-SDC) funding.

V. Amount Available

1. Allocations / Amount Available

A total of \$59,568,889 is available for projects under this IUP, all in the form of principal forgiveness. No origination fees will be assessed.

2. Allocation of Grant Funds, including Additional Subsidization:

	Emerging Contaminants	% of Grant
DWSRF IIJA FFY 2024 Allotment	\$60,914,000.00	
DWSRF IIJA FFY 2022 Reallotment	\$140,000.00	
DWSRF IIJA FFY 2023 Reallotment	\$1,742,000.00	
TOTAL Allotment and Reallotment Amount	\$62,796,000.00	
Less TWDB Administrative Set-Aside	\$2,436,560.00	4%
Less TCEQ State Management Program Set-Aside	\$790,551.00	1%
Total Set-Aside Amount	\$3,227,111.00	
Total Principal Forgiveness Allocated to Projects	\$59,568,889.00	95%

Note: Funding from the Emerging Contaminants in Small or Disadvantaged Communities (EC-SDC) EPA Grant Program may be awarded to projects from this IUP. Activity related to funding from that grant program will be made available in the Annual Report.

VI. Funding Options and Terms

Equivalency projects (Federal Requirements) - All projects will be considered equivalency projects, which must follow all federal requirements commonly known as “cross-cutters.” More information on the federal cross-cutters may be found in Appendix E.

1. Funding Options Available:

Entities listed on the Project Priority Lists (PPLs) may be invited to apply for one or more of the following funding options.

a. Disadvantaged Community or Small Systems Funding (Equivalency only)

An entity is considered an eligible disadvantaged community if it:

- 1) may have emerging contaminants,
- 2) 51 percent or more of the proposed project beneficiary area based on household connections has an Annual Median Household Income (AMHI) level that does not exceed 150 percent of the state’s AMHI level. The state AMHI from the U.S. Census 2019-2023 American Community Survey (ACS) 5-year estimate is \$76,292; therefore, the AMHI of the proposed project beneficiary area must not exceed \$114,438, and
- 3) the unemployment rate for the project beneficiaries is greater than 50 percent of the state unemployment rate (state employment rate of 5.14%) or the population has declined or the utility is a small system with 25,000 or fewer connections for the applicable utility service.

Small Systems is defined as public water systems serving fewer than 25,000 people.

This funding option offers 100 percent principal forgiveness.

b. Other emerging contaminant project funding (Equivalency only)

This funding is available to any eligible recipient. This funding option offers 100 percent principal forgiveness.

c. Emerging Contaminants for Small or Disadvantaged Systems (EC-SDC) (Equivalency-only)

The IIJA also included the Emerging Contaminants for Small or Disadvantaged Systems (EC-SDC) grant program, which focuses on addressing EC’s, including PFAS, in drinking water served by PWS in small communities (population less than 10,000) or disadvantaged communities. On September 1, 2024, EPA awarded TWDB \$110 million in federal EC-SDC grant funds for FFY2022 and FFY2023. The EC-SDC program is intended to complement the DWSRF-EC funding to support small and disadvantaged communities’ development of projects

to address emerging contaminants in drinking water. Funding is through a separate grant under the EC-SDC program.

2. Federal Requirements on Available Funds

All funds are subject to federal requirements such as Davis-Bacon Act prevailing wages ([DB-0156](#)) and Build America, Buy America ([TWDB-0559](#)). These DWSRF-funded projects must follow all federal “cross-cutter” requirements and EPA’s signage requirements. These requirements are outlined in Appendix E.

VII. Goals

The primary goal of the Texas DWSRF program is to improve public health protection. In addition, the overall goals of the Texas DWSRF program are to identify and provide funding for maintaining and/or bringing Texas’ PWSs into compliance with the SDWA; to support affordable drinking water and sustainability; and to maintain the long-term financial health of the DWSRF program fund. Goals specific to the emerging contaminants funding in this IUP are listed below.

A. Short-Term Goals

1. Fund eligible project proposals to address emerging contaminants as identified on the EPA’s Contaminant Candidate List (CCL) and include PFAS, up to the amount of funding available.
2. Prioritize proposals that have identified and will address perfluoroalkyl and polyfluoroalkyl substances (PFAS).
3. Prioritize project proposals that request construction funding.
4. Provide outreach to systems within Texas on the availability of this funding to address emerging contaminants.

B. Long-Term Goals

1. Use the emerging contaminant grant funds provided to Texas to fund project proposals to address identified emerging contaminants projects eligible for assistance with an ongoing priority for addressing perfluoroalkyl and polyfluoroalkyl substances (PFAS).
2. To the extent eligible project proposals are received, use all the emerging contaminant funds allotted to Texas to improve public health and enhance the objectives of SDWA.
3. The TWDB and TCEQ will collaborate on the deployment of these funds in a manner that will provide the most benefit to public health and ensure compliance with the requirements of SDWA.

VIII. Participating in the DWSRF Program

A. Solicitation of Project Information

Project information was solicited from eligible entities across the state using direct emails, notices posted on the TWDB website, and financial assistance workshops held throughout the State. Potential applicants submitted PIFs by the response deadline in Appendix A.

The required information submitted on a PIF consisted of:

- A detailed description of the proposed project.
- A list of the emerging contaminants that the project will address (if emerging contaminants have been identified, applicant needs to provide documentation of the presence).
- A map(s) showing the location of the service area.
- An estimated total project cost that is certified by a registered professional engineer if project costs are greater than \$100,000.
- A checklist and schedule of milestones to determine a project's readiness to proceed to construction.
- Information necessary to rank the project:
 - (a) Whether there are identified perfluoroalkyl and polyfluoroalkyl substances (PFAS) that will be addressed by the proposed project
 - (b) Whether there are other identified emerging contaminants on any of EPA's Contaminant Candidate Lists (CCLs) that will be addressed by the proposed project.
 - (c) Whether there is any proposed monitoring for the specific purpose of project development (planning, design, and construction). Note regular operations & maintenance monitoring is ineligible.
 - (d) Whether the proposed project requests funds for the construction phase.
 - (e) Whether the project will provide first-time service to connections currently un-served by a public water system that have found emerging contaminants in their current source of water.
 - (f) Whether the project will facilitate consolidation of one or more water systems that have identified a presence of emerging contaminants into another water system that does not have emerging contaminants or has removal capability.
 - (g) Project beneficiary area's Annual Median Household Income (and if seeking disadvantaged community status, all the required information).

- (h) Project beneficiary area's unemployment rate.
- (i) Project beneficiary area's population change percentage.
- (j) System size – number of connections and people served.
- Signature of the applicant's authorized representative.
- Additional information detailed within the solicitation for projects as needed to establish the priority rating.

Any survey being used for income determination must be completed within five years of the date the TWDB receives the PIF.

B. Evaluation of the Project Information Received and Priority Rating System

All PIFs are evaluated by the TWDB and projects eligible for funding are scored and ranked according to the established rating criteria. The scores are based on information received by any established PIF deadline. Throughout the evaluation process, entities are contacted by staff if additional information is needed.

The TWDB performed the priority rating of projects by assigning points for projects that addressed factors provided in Appendix C.

C. Ranking and Creation of the Project Priority List

Each project submitted by the initial deadline and determined to be eligible is ranked from highest to lowest by the combined rating factors and included on the PPL. In the event of ties in the rating, priority is given to the project serving the fewest connections. Project information submitted after the PIF deadline is not considered for rating purposes prior to adoption of the initial PPL. Following approval of the IUP, changes to a ranked project that result in a project no longer addressing the issues for which it was rated will require the project to be re-rated and re-ranked. Changes in the project that do not trigger re-rating and re-ranking are:

1. The applicant for a proposed project changes but the project does not change;
2. The number of participants in a consolidation project changes and the change does not result in a change to the combined rating factor; or
3. The fundable amount of a proposed project does not increase by more than 10 percent of the amount listed in the approved IUP. The Executive Administrator may waive the 10 percent limit to incorporate additional elements to the project;.

Based on a review of readiness to proceed to construction, the TWDB determined which phases would be eligible to receive funding. The phases indicated on the TWDB invitation represent the phases deemed eligible based on that review. In general, if the complete project is not being funded solely by the DWSRF-EC Program, it is recommended that funds from this program cover the initial phases of the project (e.g., planning and design).

D. Bypassing Projects

The TWDB's Executive Administrator may decide to bypass, or skip, higher ranked projects in favor of lower ranked projects to ensure that funds available are utilized in a timely manner, that statutory and capitalization grant requirements are met, including the 25 percent requirement for disadvantaged communities or small systems. In addition, if an entity is offered funding for any project that has an interrelated project ranked lower on the list, the Executive Administrator has discretion to also offer funding for the interrelated project. If an entity has multiple projects, projects may be bypassed to allocate funds to more than one entity. Reasons for bypassing projects are discussed in Appendix F.

E. Phases for Invited Projects

1. Pre-Design Funding Option (or Planning, Acquisition, Design and Construction Funding)

The pre-design funding option allows an applicant to receive a single commitment for all phases of a project. The construction portion of the project must be deemed ready to proceed before funds for the construction phase will be released. Acquisition costs could be eligible in proportion to the eligible project costs.

2. Construction Funding Only

Projects that were determined to be ready to proceed to construction based on the current status of their planning, acquisition, and design activities.

3. Planning, Acquisition, and Design

A project that was not deemed ready to proceed to construction may receive an invitation to fund only the Planning Acquisition, and/or Design portion of the project. Acquisition costs could be eligible in proportion to the eligible project costs,

4. Viability and Feasibility of Projects

A project must demonstrate to the TWDB that it is viable, feasible, and sustainable prior to being invited to submit an application and prior to receiving a commitment for any funding option, including additional subsidization/principal forgiveness, for the acquisition, design or construction phases of the project. A project may receive funds for the planning phase to assess the viability and feasibility of a project.

F. Invitations and Application Submissions

The TWDB will invite certain entities on the PPL to submit an application for the project phases shown on the list using the available funding options. An entity on the list may not submit an application until it receives an invitation from TWDB. TWDB

will consider the need to meet the minimum federal additional subsidization requirements when deciding whether it needs to bypass projects on the PPL.

Intent to Apply

As part of the invitation process the TWDB may require the applicant to submit an intent to apply form or information by a specified deadline showing the applicant's intent to request up to the eligible amount of funding in the IUP. **Failure to submit the requested intent to apply information by the established deadline will result in the TWDB bypassing the project on the IUP list.** Bypassed projects are not considered for funding during the remainder of the funding cycle unless funds remain after inviting other eligible projects from the IUP list.

Applicants that submit an accepted Intent to Apply are invited to a pre-application meeting. Entities are required to participate in a pre-application meeting to discuss the application process and project requirements prior to submitting an application. Invited applications from projects on the PPL that are received during the initial invitation round after Board approval of the IUP will be allotted available funds based on rank order. All projects must be determined administratively complete as submitted or within 14 days from the date the applicant receives a notice to correct deficiencies or the project will be bypassed.

Each application received by the TWDB will be reviewed to ensure that the required milestones have been met to allow funding of the phase(s) being requested. If the application review determines that a project is not ready to proceed for funding for the phase(s) being requested, the project may be bypassed for any additional subsidy amounts or receive limited phases of funding.

Projects may be bypassed if an applicant fails to timely submit a complete application or additional requested information within a timely manner.

Deadline for Receipt of Invitation

The TWDB will establish a deadline for receipt of the application. If the application is not received by the established deadline, the project will be bypassed.

Subsequent Invitations

TWDB may invite additional projects to submit if any funds remain unallocated after an initial invitation. Applicants may submit a PIF at any time for a project to be considered for inclusion on the amended PPL. The new projects will be considered after those on the original PPL list have been invited. Amendments to the project lists will undergo a 14-day public review period that will be advertised on the agency website.

G. Addressing Any Water Loss Mitigation within the Application

If an applicant that is a retail public utility providing potable water has a water loss that meets or exceeds the threshold for that utility in accordance with §358.6 of Title 31, Part 10, Texas Administrative Code, the retail public utility must use a portion of any financial assistance received from the DWSRF, or any additional financial assistance provided by the TWDB, to mitigate the utility's water loss. However, at the request of a retail public utility, the TWDB may waive this requirement if the TWDB

finds that the utility is satisfactorily addressing the utility's system water loss. Mitigation, if necessary, will be in a manner determined by the retail public utility and the TWDB's Executive Administrator in conjunction with the project proposed by the utility and funded by TWDB. Note that DWSRF-EC program funds cannot be used to address water loss mitigation unless it directly relates to emerging contaminants.

H. Self-Certification for Certain Systems Serving 500 or Fewer Persons

The Water Infrastructure Improvements for the Nation Act (Public Law 114-322) requires DWSRF assistance recipients serving 500 or fewer persons to consider publicly-owned wells (individual, shared or community) as an option for their drinking water supply. Any applicable project involving the construction, replacement or rehabilitation of a drinking water system which is not already using a publicly-owned well for the source are required to self-certify. If the community already uses a publicly-owned well (including a privately-owned well for a public water system) and the project does not involve a new water source, then the self-certification is not needed. The self-certification is only for projects which do not involve a publicly-owned well source to ensure that this was one of the water supply options considered but not selected as the best alternative.

I. Closing Deadlines

All commitments must close within six months from the date of the commitment. In extenuating circumstances, the Board may grant extensions of time to close if an applicant demonstrates sufficient reason for a delay. The TWDB may extend these closing deadlines if necessary to conform to the closing schedule for concurrent financing for the project from another TWDB financing program.

Type of Financial Assistance	Closing Deadline
All commitments	6 months

J. Limits

1. Proportionate Share/Capacity

The TWDB may limit the amount of total funding available to an individual entity or project based on a proportionate share of total funds available.

2. Additional Project Funding Before Closing

The total project costs may be increased if the entity shows that additional funds are necessary to implement the project.

3. Transfer of Funds

Similar to the regular/base grants, the TWDB may transfer IIJA funds between the DWSRF emerging contaminants account and the Clean Water State Revolving Fund (CWSRF) emerging contaminants account, or vice versa, in an amount up to thirty-

three percent (33 percent) of the DWSRF IJA emerging contaminants Grant Amount, or \$20,101,620. The TWDB is not proposing any transfer any funds between the CWSRF emerging contaminant program and the DWSRF emerging contaminants program in this IUP; However, the TWDB reserves the authority for transferring funds in the future.

K. Updates to the Intended Use Plan

Substantive changes to the IUP may be made through an amendment after a 14-day public review and comment period. Non-substantive changes may be made by the TWDB without public notification.

IX. Set-Asides

Federal regulations allow states to set aside up to 31 percent of the capitalization grant funds for purposes other than financing construction projects for water systems. The set asides for the FFY 2024 capitalization grant for emerging contaminants will be allocated as shown below.

A. Texas Water Development Board Administration and Technical Assistance Activities

The SDWA allows a state to set aside funds to cover the reasonable costs of administering the DWSRF and to provide technical assistance to public water systems. The amount that may be taken for these purposes is the amount of any fees collected by the State, regardless of the source; and the greatest of (1) \$400,000, (2) one-fifth of one percent of the current valuation of the DWSRF (both loan and set-asides), and (3) an amount equal to four percent of all grant awards to the DWSRF for the particular fiscal year.

The TWDB will draw administrative and technical assistance set-asides from the FFY 2024 Capitalization Grant in the amount of \$2,436,560. This amount is based on the option of using four percent of the original FFY 2024 DWSRF capitalization grant allotment. These funds will be used for allowable expenses such as reporting activities, payment processing, application assistance, project development and monitoring, and technical assistance to public water systems.

Federal regulations governing the DWSRF program permit a state to reserve its authority to take an amount equal to 4 percent of the current year's grants from a future grant to defray the cost of administering the program. The TWDB, as it has done since SFY 1998, is reserving that authority.

B. Texas Commission on Environmental Quality Activities

Funds from the FFY 2024 IJA Emerging Contaminants Appropriations may be used for TCEQ Set-Aside activities. The TCEQ has elected to use \$790,551 to support a Texas Department of State Health Services (TxDSHS) project to renovate existing laboratory space and purchase essential instruments and infrastructure necessary to operate those instruments to support drinking water lab capacity for Per- and

Polyfluoroalkyl Substances (PFAS) sample analysis for Public Water Systems (PWS) across the State of Texas on behalf of TCEQ's Public Water System Supervision Program (PWSSP). IIJA Emerging Contaminant grant funds from the 10 percent State Program Management Set Aside may be used in SFY 2025. A detailed description of the SFY 2025 activities may be found in TCEQ's DWSRF-EC Set Aside Work Plan.

C. Coordination of Activities with the Texas Commission on Environmental Quality

The TWDB and TCEQ regularly communicate to discuss projects in need of financial assistance through the DWSRF program. The two agencies hold periodic DWSRF coordination meeting and TCEQ staff attend many of TWDB's pre-application meetings and financial assistance workshops.

D. Other Set-Aside Funds

All other set-aside authority from the grants is reserved.

X. Financial Status

The TWDB will comply with the requirements associated with the FFY 2024 allotments under this SFY 2025 IUP.

A. State Match

No state match is required for the emerging contaminant grant funds.

B. Binding Commitment Requirement

The TWDB will enter into binding commitments with entities during SFY 2025 that total the amount of a FFY 2024 grant payment allocated to projects within one year after the receipt of the grant payment. A binding commitment occurs when the TWDB's Board adopts a resolution to commit funds to a project.

C. Leveraging

The DWSRF program will be leveraged as necessary to provide funds to meet the needs of public water systems in the state. The TWDB does not anticipate leveraging the emerging contaminant grant funds at this time.

D. Cross-collateralization

On March 1, 2018, the TWDB has cross-collateralized the CWSRF and the DWSRF as a source of revenue and security for the payment of the principal and interest on bonds for the DWSRF and CWSRF programs. State authority is provided under Section 15.6042 of the Texas Water Code. The TWDB has received a certification from the state Attorney General that state law permits the TWDB to cross-collateralize the assets of the CWSRF and the DWSRF. Cross-collateralization of

the CWSRF and DWSRF will enhance the ability of the DWSRF to leverage its funds and increase its lending capacity without detriment to either of the SRF programs.

1. Summary of the cross-collateralization structure:
 - a. The type of moneys which will be used as security – Pledged Political Subdivision Bonds and certain other funds included in the Master Resolution (program account, portfolio account, and revenue account) will secure the bonds.
 - b. How moneys will be used in the event of a default - In the cross-collateralized scenario, Political Subdivision Bonds from the non-defaulting program will be used to cover the debt service delinquency on the defaulting program. If, for any reason, insufficient Political Subdivision Bonds exist in both programs, then program equity will be utilized.
 - c. Whether or not moneys used for a default in the other program will be repaid; and, if it will not be repaid, what will be the cumulative impact on the funds. While a decision to repay or not repay would be made at the time of default, the TWDB would either require repayment when funds are available or transfer repayment funds.
2. Proportionality – The proceeds generated by the issuance of bonds will be allocated to the purposes of the CWSRF and the DWSRF in the same proportion as the assets from the two funds that are used as security for the bonds.
3. State Match – In accordance with Texas Water Code §§ 17.853(c)(1) and 17.859, the TWDB intends to provide state match through the issuance of one or more revenue bonds in a program series that will fund the two SRF programs. Supplemental bond resolutions for the issuance of each series will provide detail on what specific money is pledged as security for each program (CWSRF or DWSRF) within the series. As required, the CWSRF and DWSRF will continue to be operated separately. The cash flows for the DWSRF program and the CWSRF program will be accounted for separately. Repayments on loans in the CWSRF program will be paid to the CWSRF and repayments on loans made in the DWSRF program will be paid to the DWSRF.

Similar to other states' financing methods where state match is not provided by appropriation and is instead generated through debt issuance, the TWDB cross-collateralization structure allows the TWDB to retire bonds for the State Match with interest earnings payments only, not principal, earned from each SRF in accordance with 40 CFR § 35.3550(g)(3).

E. Method of Cash Draw

There is no state match and EPA has revised its cash draw policy as described in "Class Exception from the Clean Water and Drinking Water State Revolving Fund Cash Draw Rules", dated November 18, 2022. Therefore, TWDB will draw federal funds using acceptable evidence of expenditures.

F. Long-Term Financial Health of the Fund

The long-term financial health of the DWSRF is monitored through ongoing cash flow and capacity modeling. The TWDB lending rate policy has been established to preserve the corpus of the capitalization grants and state match funds, excluding the amount of additional subsidization, set-aside amounts from each grant, and net transfers. The TWDB will continue to manage the DWSRF to ensure funds will be available in perpetuity for activities under the SDWA.

G. Fees

No origination fee will be assessed on project financing.

H. EPA Program Evaluation Report and Audit

The EPA has conducted an annual program review of the DWSRF program for SFY 2024 in April 2025. The final EPA Program Evaluation Report related to the DWSRF program in SFY 2024 is not yet available. The TWDB will provide status updates within the SFY 2025 Annual Report for any recommendations or action items following the receipt of a final EPA Program Evaluation Report. The Texas State Auditor's Office published the results of the SFY 2024 Federal Portion Single Audit of the DWSRF on February 26, 2025 (Report 25-315). There were no findings as a result of the review.

XI. Navigating the Lists

Appendices G – J are a series of lists that detail the proposed project information of each project based upon the PIFs received.

- **Appendix G** - The alphabetical list is the PPL sorted alphabetically. It contains the project information; the name of the applying entity, their total number of points and associated priority order rank, the system's PWS ID number, the total population based on TCEQ data, a detailed description of the proposed project, all project phases requested by the entity, and total project cost. A grand total for all of the projects is listed on the last page of the appendix.
- **Appendix H** – Projects that were deemed ineligible to receive DWSRF funding with a brief description as to why they were deemed ineligible.
- **Appendix I** – Projects that were deemed ineligible to receive disadvantaged funding with a brief description as to why they were deemed ineligible. The project may still be eligible to receive other funding options.
- **Appendix J** – Lists projects in order of highest priority to receive funding. The content is the same as the alphabetical list in Appendix G.

Appendix A. Public Review and Comment

Public Participation in the Development of the Intended Use Plan

Public participation is an important and required component of the IUP development process. The TWDB takes seriously its responsibility in administering these funds and considers public input necessary and beneficial.

A. Notice

To seek public comment, the draft IUP including the Project Priority List was made available until May 21, 2025. The draft FFY 2024/SFY 2025 DWSRF Emerging Contaminants IUP was announced as follows:

- Public notification of the draft IUP and the public comment period was posted on the TWDB website at www.twdb.texas.gov.
- A copy of the draft IUP was sent to EPA after being published for public comment.

B. Comment

Comments were accepted via the following three options from May 7, 2025, until midnight on May 21, 2025.

1. Attending a public hearing on May 13, 2025, at 1:30 P.M. at the Stephen F. Austin State Office Building, Room 172, in Austin, Texas.
2. Completing a Public Comment Microsoft Form online.
3. Emailing comments to the following electronic mail address and specifying in the subject line "*DWSRF Emerging Contaminants comments*".
DWSRF@twdb.texas.gov.

C. Effective Date

The FFY 2024/SFY 2025 DWSRF Emerging Contaminants IUP is considered final on the effective date.

D. Documentation

The final entire IUP, including project lists, was formally submitted to the EPA and posted on the TWDB website.

Appendix B. Projected Sources and Uses of Funds
(As of May 1, 2025 – FFY IIJA Allotments)

SOURCES:

FFY 2024 Federal IIJA Capitalization Grant Allocation	\$60,914,000
FFY 2022 Federal IIJA Capitalization Grant Reallocation	\$140,000
FFY 2023 Federal IIJA Capitalization Grant Reallocation	\$1,742,000

TOTAL SOURCES: **\$62,796,000**

USES:

Set-Asides from FFY 2024 Grant

TWDB Administrative Set-Aside	\$2,436,560
-------------------------------	-------------

Total TWDB Set-Aside: **\$2,436,560**

TCEQ Small Systems Technical Assistance Program Set-Aside	\$0
---	-----

TCEQ Texas State Management Program Set-Aside	\$790,551
---	-----------

TCEQ Local Assistance and Other State Programs Set-Aside	\$0
--	-----

Total TCEQ Set-Asides **\$790,551**

Projects to be Funded:

SFY 2025 IUP Commitments – Principal Forgiveness	\$59,568,889
--	--------------

Total Projects To Be Funded - SFY 2025: **\$59,568,889**

TOTAL USES: **\$62,796,000**

NET SOURCES (USES): **\$0**

Appendix C. Rating Criteria

1.a. Identified perfluoroalkyl and polyfluoroalkyl substances (PFAS) (Highest priority) where PFAS exceed at least two (2) maximum contaminant levels (MCLs) of the National Primary Drinking Water Regulation (NPDWR) within one analytical sample, and requested construction costs for treatment and removal of PFAS in finished water (e.g., reverse osmosis membranes, GAC, ion-exchange, or other approved methods) – 200 points (Highest priority), OR

1.b. Identified perfluoroalkyl and polyfluoroalkyl substances (PFAS) (Highest priority) where PFAS exceed at least one MCL of the NPDWR within one analytical sample, and requested construction costs for treatment and removal of PFAS in finished water (e.g., reverse osmosis membranes, GAC, ion-exchange, or other approved methods)– 175 points, OR

1.c. Identified perfluoroalkyl and polyfluoroalkyl substances (PFAS) (Highest priority) where PFAS do not exceed MCLs of the NPDWR and requested construction costs for treatment and removal of PFAS in finished water (e.g., reverse osmosis membranes, GAC, ion-exchange, or other approved methods)– 150 points, OR

1.d. Identified other emerging contaminants (other than PFAS) and requested construction costs for treatment and removal of the emerging contaminants in finished water (e.g., reverse osmosis membranes, GAC, ion-exchange, or other approved methods), - 125 points, OR

1.e. Proposals requesting only planning and design and associated pre-project costs, including pilot testing, for any eligible purpose, without requesting the associated construction costs – 50 points

Plus the following:

2. Proposal will provide first-time service to connections currently unserved by a public water system that have found emerging contaminants in their current water source – 20 points

3. Proposal will facilitate consolidation of one or more water systems into another water system that does not have emerging contaminants present or has removal capability – 25 points

4. Disadvantaged Community or Small System – 30 points

i. Disadvantaged community is defined in Appendix D.

ii. A small system for the purpose of this IUP is a public water system serving fewer than 25,000 people

5. A rural project is one that fits any of the following – 10 points:

i. An entity that provides services predominately in a rural area. Using the U.S. Bureau of the Census 2010 decennial census definitions of a rural area, not more than 20

percent of the residential service connections are in urbanized areas and not more than 50 percent are in urban clusters according to the most recent data available to TWDB. The calculation will be based on the utility service(s) associated with the proposed project; OR

ii. A project from a political subdivision with a population of 10,000 or less and located outside the extraterritorial jurisdiction of a city with a population of 500,000 or greater; OR

iii. A project in a county in which no urban political subdivision exceeds 50,000 in population based upon the most current data available from the U.S. Bureau of the Census or TWDB-approved projections.

6. System size

Applicant entity serves under 1,000 connections – 15 points

Applicant entity serves between 1,000 and 10,000 connections – 10 points

Applicant entity serves between 10,000 and 25,000 connections – 5 points

Applicant entity serves over 25,000 connections but fewer than 50,000 connections – 2 points

Tie Breaker

Rating factors will be ranked in descending order with priority given to the entity serving the fewest connections first.

Appendix D. Criteria to Determine Disadvantaged Community Eligibility

An entity is considered an eligible disadvantaged community if it:

- 1) may have emerging contaminants,
- 2) 51 percent or more of the proposed project beneficiary area based on household connections has an Annual Median Household Income (AMHI) level that does not exceed 150 percent of the state's AMHI level. The state AMHI from the U.S. Census 2019-2023 American Community Survey (ACS) 5-year estimate is \$76,292; therefore the AMHI of the proposed project beneficiary area must not exceed \$114,438, and
- 3) the unemployment rate for the project beneficiaries is greater than 50 percent of the state unemployment rate or the population has declined or the utility is a small system with 25,000 or fewer connections for the applicable utility service.

Acceptable Source of Socioeconomic Data for SFY 2025

For this IUP, the TWDB will utilize:

- (1) U.S. Census 2019-2023 ACS 5-year estimates. An Excel spreadsheet containing this data is located here:

<https://www.twdb.texas.gov/financial/instructions/doc/ACS-data-for-SFY2026.xlsx>

Entities may also access their U.S. Census 2019-2023 ACS 5-year estimate data directly from the U.S. Census webpage. Census Data Search guidance (WRD-284) is available on the TWDB website at: <http://www.twdb.texas.gov/financial/instructions/doc/WRD-284.docx>

OR

- (2) Data from a socioeconomic survey approved by the Executive Administrator of a statistically acceptable sampling of customers in the service area completed in accordance with the most current Socioeconomic Surveys Guidelines (WRD-285) posted on the TWDB website. Any survey being used for income determination must be conducted within five years prior to the date the TWDB receives the PIF. An entity must submit documentation that substantiates the inadequate or absent Census data that led to the need to conduct a survey. **All entities must obtain prior approval to use survey data instead of the most recently available ACS data.**

In instances where the ACS data does not adequately reflect an entity's service area (e.g. an entity serves a community outside of its Certificate of Convenience and Necessity, an entity serves another system, the entity is a system without a Census Bureau defined boundary, etc.), a prorated analysis of ACS block group data will be performed to calculate the AMHI. Systems owned and operated by a public school or school district will be evaluated for their annual median household income for their school district boundary.

If recent reliable data is unavailable for the school district to determine the AMHI, the TWDB will use information from the Texas Education Agency's Title I, Part A program to determine income eligibility. If more than 50 percent of the school districts campuses are eligible for the program, the district's AMHI will be assumed to be eligible.

Methodology - Disadvantaged Community Eligibility Calculation

City/Place, Census Tract and Block Group geographical U.S. Census geographical areas or an eligible income survey may be used for the AMHI, unemployment rate and population change calculations.

The methods below should be used to find the AMHI for the project beneficiary area. When finding the AMHI for the census geographic areas, applicants should also make note of the unemployment percentages and population change, as the same method and data source used for the AMHI calculation method below will be used for the unemployment rate and change in population. If an income survey is used, TWDB will use the most appropriate geographical area that represents the proposed project beneficiaries for determining the unemployment rate and change in population.

First method, easiest method to employ:

To lessen the burden on applicants who can meet the requirement without considering the 51% level, the TWDB will make the presumption that the average (mean) of the AMHI of all U.S. Census Bureau Cities/Places, Block Groups and/or Census Tracts containing any portion of the project service area is the AMHI for the project. Applicants must provide a list of all of the Cities/Places, Block Groups and/or Census Tracts containing any portion of the project service area, the AMHI for each City/Place, Block Group and/or Census Tract, and a detailed map of the proposed service area to be considered for using the presumptive approach in establishing the project's AMHI. TWDB will use the project area map to verify the associated Cities/Places, Block Groups and/or Census Tracts submitted. The Executive Administrator will then determine whether this option is a reasonable estimate of the AMHI for the project service area and may be used for the AMHI threshold calculation.

Second method, if first method does not meet the 150 percent threshold:

Any applicant that does not meet the 150 percent threshold by using the average (mean) of the U.S. Census Bureau Block Groups and/or Census Tracts containing any portion of the project service area may submit the actual number of household connections in each Block Group and/Census Tract and calculate the weighted average AMHI for the project service area.

Third method, if necessary to meet the 150 percent threshold:

Finally, if the AMHI of the applicant's project service area does not fall within 150 percent of the state AMHI threshold without consideration of the 51 percent calculation, the applicant would need to provide the number of household connections in each U.S. Census Bureau's geographical area that is used in the calculation.

Alternatively, as with general program activities, the entity may conduct an income survey for determining the applicable AMHI. Any survey being used for income determination must be completed within five years of prior to the date the TWDB receives the PIF.

Appendix E. Federal Requirements and Assurances

A. Federal Requirements

1. Build America, Buy America Act, 2021

The requirements of the Build America, Buy America Act, 2021 (P.L. 117-58), known as BABA, will apply to all projects funded for emerging contaminants. Additional information on BABA is available on the TWDB website at:

<http://www.twdb.texas.gov/financial/programs/BABA/index.asp>

TWDB Guidance (TWDB-0559) is available at

<http://www.twdb.texas.gov/financial/instructions/doc/TWDB-0559.pdf>. An additional source of information on BABA is Information on EPA's [website](#).

2. Davis-Bacon Wage Rate Requirements

A subrecipient must comply with the requirements of section 1452(a)(5) of the Safe Drinking Water Act (42 U.S.C. 300j-12(a)(5)) in all procurement contracts and must require contractors to include compliance with section 1452(a)(5) of the Safe Drinking Water Act in all subcontracts and other lower tiered transactions. All contracts and subcontracts for the construction project must contain in full in any contract in excess of \$2,000 the wage rate requirements contract clauses prescribed by TWDB. Section 1452(a)(5) requires compliance with 40 U.S. Code Sections 3141 to 3144, 3146, and 3147 covering wage rate requirements. TWDB guidance is available at <http://www.twdb.texas.gov/financial/instructions/doc/DB-0156.pdf>.

3. American Iron and Steel (AIS)

The TWDB and all DWSRF financial assistance recipients will comply with the American Iron and Steel (AIS) requirement in applicable federal law, including federal appropriation acts. Federal law requires DWSRF assistance recipients to use iron and steel products that are produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system or treatment works.

The term “iron and steel products” means the following products made primarily of iron or steel:

- lined or unlined pipes and fittings
- manhole covers and other municipal castings
- hydrants
- tanks
- flanges, pipe clamps and restraints
- valves
- structural steel
- reinforced precast concrete
- construction materials

EPA may waive the AIS requirement under certain circumstances.

Furthermore, if the original financial assistance agreement for the planning and/or design of a project closed prior to January 17, 2014, then the AIS provision would not

apply to the construction phase of the same project. TWDB guidance (TWDB-1106) is available at <http://www.twdb.texas.gov/financial/instructions/doc/TWDB-1106.pdf>.

4. Environmental Reviews

The National Environmental Policy Act (NEPA)-like environmental review requirements are specified in Texas Administrative Code, Title 31, Part 10, Chapter 371. The NEPA-like environmental review applies to all DWSRF emerging contaminant projects.

5. Generally Accepted Accounting Principles

Assistance recipients must maintain project accounts according to Generally Accepted Accounting Principles as issued by the Governmental Accounting Standards Board, including standards relating to the reporting of infrastructure assets.

6. Compliance with Cross-cutting Authorities

There are a number of federal laws, executive orders, and federal policies that apply to projects and activities receiving federal financial assistance, regardless of whether the federal laws authorizing the assistance make them applicable. These federal authorities are referred to as cross-cutting authorities or cross-cutters. All cross-cutters apply to Equivalency projects, and all emerging contaminant projects are equivalency projects.

The cross-cutters can be divided into three groups: environmental; social policies; and, economic and miscellaneous authorities.

- Environmental cross-cutters include federal laws and executive orders that relate to preservation of historical and archaeological sites, endangered species, wetlands, agricultural land, etc. This cross-cutter requirement includes a National Environmental Policy Act (NEPA) compliant environmental review. When conducting the NEPA-like review the TWDB will inform EPA when consultation or coordination by EPA with other federal agencies is necessary to resolve issues regarding compliance with applicable federal authorities.
- Social policy cross-cutters include requirements such as minority and women's business enterprise participation goals, equal opportunity employment goals, and nondiscrimination laws. This cross-cutter requirement includes compliance with the EPA's Disadvantaged Business Enterprise program administered by TWDB.
- Economic cross-cutters directly regulate the expenditure of federal funds such as the prohibition against entering into contracts with debarred or suspended firms.

The Equivalency projects that are considered federal are those entered into the Federal Funding Accountability and Transparency Act Subaward Reporting System.

7. Financial, Managerial, and Technical (FMT) Capacity

Prior to receiving or closing a commitment, the TCEQ will conduct a review of each applicant's FMT capacity. All applicants must receive FMT approval before closing on financial assistance funding.

8. Competency Statements

The following competency statements are provided to satisfy the EPA's policy entitled "Policy to Assure Competency of Organizations Generating Environmental Measurement Data under Agency Funded Assistance Agreements."

A. TWDB Competency Statement

TWDB ascertains that competency can be demonstrated by the following:

1. The "TWDB Quality Management Plan," was approved by EPA Region 6 in February 2025. The plan demonstrates competency by providing a description of the quality policies including all requirements described in EPA QA/R-2.

B. TCEQ Competency Statement

TCEQ ascertains that competency can be demonstrated by the following:

1. EPA approval of the "Quality Assurance Project Plan for the Public Water Supply Supervision Program Relating to the Safe Drinking Water Act of the Texas Commission on Environmental Quality", Revision 14, (QTRAK #23-033), approved by EPA on November 10, 2022, which is approved through November 10, 2025.
2. The "TCEQ Quality Management Plan, Revision 29 (2024)" (QTRAK# 24-064) approved on December 7, 2023 by EPA Region 6 which demonstrates competency by providing a description of the quality policies including all requirements described in EPA QA/R-2.

9. Compliance with Capacity Development Authority, Capacity Development Strategy and Operator Certification Program

- A. Capacity development authority. The State of Texas, through the TCEQ, has the legal authority to ensure that all new community water systems, and new nontransient, noncommunity water systems that commence operations have demonstrated FMT capacity with respect to national primary drinking water regulations. If DWSRF financial assistance is being provided to the new system, TCEQ conducts and provides to TWDB the results of its FMT assessment prior to closing on the financial assistance.
- B. Capacity development strategy. The State of Texas, through the use of DWSRF set-asides provided to TCEQ, implements a strategy to assist public water systems in acquiring and maintaining financial, managerial, and technical capacity. The TWDB has set aside funds from the regular/base program FFY 2023 grant for TCEQ to implement a capacity development strategy. TCEQ will use funds from the State Program Management, Small Systems Technical Assistance, and Local Assistance and Other State Programs set-asides to conduct the capacity development activities. The TCEQ demonstrates compliance with the Capacity Development Strategy requirement of the SDWA by annually submitting the Capacity Development Report to EPA. The most recent report was provided to EPA on November 27, 2024. The TCEQ submitted the TCEQ Triennial Progress Report to the Governor on the Public Water Supply Capacity

Development Program on September 29, 2023 as required by SDWA Section 1420(c)(3).

- C. Operator certification program. The State of Texas, through the TCEQ, has a program for certifying operators of community and nontransient, noncommunity public water systems. The TCEQ demonstrates compliance with the Operator Certification Program Provisions by annually submitting an Operator Certifications Program Report to EPA. The most recent report was provided to EPA on September 9, 2024.

10. Signage

DWSRF emerging contaminants projects must comply with applicable EPA signage requirements. See guidance for SRF Project Public Awareness, [TWDB-1109](#).

B. Assurances

Entry into the Federal Reporting Systems

The TWDB will enter information into EPA's DWSRF Reporting System, the DWSRF National Information Management System, and the Federal Funding Accountability and Transparency Act Sub-Award Reporting System as required.

Appendix F. Bypass Procedures

The Executive Administrator may decide to bypass, or skip, higher ranked projects in favor of lower ranked projects to ensure that funds available are utilized in a timely manner and that statutory and capitalization grant requirements are met. If an entity is offered funding for any project that has an interrelated project ranked lower on the list, the TWDB Executive Administrator will have discretion to also offer funding for the interrelated project. The TWDB may limit the amount of total funding available to an individual entity or project based on a proportionate share of total funds available.

Reasons for bypassing projects are listed below, but are not limited to:

1. Fulfill the Minimum Additional Subsidization Requirement

A project on the PPL may be bypassed to fulfill the federal minimum additional subsidization requirement or to make commitments of the amount of funds that remain unallocated.

2. Intent to Apply and Application Submission Deadlines

A project may be bypassed if the applicant did not submit any intent to apply form or information by a specified deadline or the application is not received by the TWDB-established submission deadline and it is not administratively complete by the established deadline.

3. Disadvantaged Community or Small Systems

In the event that there are not enough projects with completed applications eligible to receive Disadvantaged Community or Small Systems funding to meet required 25 percent requirement, the Executive Administrator may bypass other projects to invite additional projects that are eligible for additional subsidization.

4. Readiness to Proceed

The Executive Administrator may bypass projects to include those deemed ready to proceed to construction.

5. Past Project Performance

If the applicant has failed to close a commitment or complete a project in a timely manner under a prior IUP, and it is determined that such failure to perform could jeopardize the timely use of funds for a project under this IUP, the Executive Administrator may bypass the project.

6. Financial Capacity

A project may be bypassed if the Executive Administrator determines that the applicant will be unable to repay the SRF financial assistance for the project or does not have acceptable financial records or audits.

Texas Water Development Board
SFY 2025 Drinking Water State Revolving Fund - Emerging Contaminants
Intended Use Plan
Appendix G. Project Priority List - Alphabetical

Rank	Points	Entity	PWS ID	PIF No.	Population	Project Description	Requested Phase(s)	Emerging Contaminants	Total Project Cost
9	207	Baytown Area Water Authority	TX1011742	17122	129,317	BAWA conducted multiple sampling and testing events throughout 2023-2024. The results confirmed the presence of regulated PFAS compounds, including PFOA, PFOS, PFHxS, PFNA, and PFBS, in the finished water. Analysis indicated an average PFOS concentration exceeding the 4 ng/L enforceable Maximum Contaminant Level (MCL) set by the USEPA. PFOA was detected slightly below the 4 ng/L enforceable MCL, while PFHxS, PFNA, and PFBS were present but remained within compliance limits. With the April 2029 compliance deadline approaching, BAWA is preparing to design, construct, and commission a treatment system to ensure regulatory compliance for PFAS removal before enforcement begins. BAWA plans to explore an Ion Exchange resin system at both the BAWA Fritz Lanham SWTP and BAWA East SWTP to effectively adsorb and remove PFAS chemicals from the finished water. Design will include researching different treatment options with both capital and life cycle costs evaluations. This initiative aims to meet federal regulatory requirements and ensure the delivery of safe drinking water to the community.	PDC	PFAS, PFOS, PFOA	\$ 71,885,000.00
12	180	Canyon Park WSC	TX1870034	17123	453	This project will include a new water treatment plant and a new water well that will be deeper and potentially not have contaminants in the water.	PDC	Lithium	\$ 4,200,000.00

5	230	Dallas Water Utilities	TX0570004	17124	2,679,042	The City of Dallas Water Utilities' (DWU) Bachman WTP is a critical water treatment facility. Regular sampling of the primary source water supply (Elm Fork of the Trinity River) and at the WTP has measured concentrations of PFAS compounds at or below the EPAs established MCLs. The proposed project includes the planning, design and construction of identified PFAS treatment process. DWU will conduct a PFAS Assessment, which includes integrating enhanced PFAS monitoring into DWU's source water sampling program at Bachman to establish seasonal PFAS occurrences, researching near- and long-term strategies to reduce PFAS levels, evaluating established and emerging treatment technologies for PFAS removal, conducting preliminary pilot studies (if needed) to confirm the viability of identified technologies, and identifying the preferred PFAS mitigation approach for compliance with regulatory requirements. DWU will complete the design (including 30%, 60% and 100% plans and specifications) of the PFAS mitigation project. DWU will complete required environmental compliance documentation (NEPA) in parallel to design activities. Construction activities are anticipated to include the construction of granular activated carbon (GAC) gravity contactors, including required infrastructure modifications, to meet the average daily capacity of 150 MGD at the Bachman WTP. Appendix H. Alphabetical List of Ineligible Projects

Entity	Project Description	Emerging Contaminants	Project Cost	Reason of Ineligibility
Denton	A small subdivision of 21 homes in Denton County is facing an urgent need for a permanent water solutions. These homes currently rely on private water system supported by two community wells, both of which have failed and are considered beyond repair. The system has multiple compliance issues with TCEQ including failed biological testing where <i>E. coli</i> was detected. The subdivision is connected to the City of Denton via an emergency, above-ground interconnect. This temporary setup comprises over 1,000 feet of uninsulated hose running through a forested area and crossing two streets. The emergency interconnect was approved by TCEQ as a short-term measure to ensure water service for the residents. A long-term, sustainable solution is critically needed to provide reliable water access to these homes.	<i>E. coli</i>	\$ 1,298,777.00	Projects with a primary purpose to that address contaminants with a National Primary Drinking Water Regulation (with the exception of PFAS) are not eligible for DWSRF Emerging Contaminants funds.

9	207	Baytown Area Water Authority	TX1011742	17122	129,317	BAWA conducted multiple sampling and testing events throughout 2023-2024. The results confirmed the presence of regulated PFAS compounds, including PFOA, PFOS, PFHxS, PFNA, and PFBS, in the finished water. Analysis indicated an average PFOS concentration exceeding the 4 ng/L enforceable Maximum Contaminant Level (MCL) set by the USEPA. PFOA was detected slightly below the 4 ng/L enforceable MCL, while PFHxS, PFNA, and PFBS were present but remained within compliance limits. With the April 2029 compliance deadline approaching, BAWA is preparing to design, construct, and commission a treatment system to ensure regulatory compliance for PFAS removal before enforcement begins. BAWA plans to explore an Ion Exchange resin system at both the BAWA Fritz Lanham SWTP and BAWA East SWTP to effectively adsorb and remove PFAS chemicals from the finished water. Design will include researching different treatment options with both capital and life cycle costs evaluations. This initiative aims to meet federal regulatory requirements and ensure the delivery of safe drinking water to the community.	PDC	PFAS, PFOS, PFOA	\$ 71,885,000.00
