

**Groundwater Management Area (GMA) 2  
Desired Future Conditions  
2021 Joint Planning**

<b>Adopted Desired Future Conditions for Relevant Aquifers</b>		
<b>Aquifer</b>	<b>Desired Future Condition (DFC)</b>	<b>Date DFC Adopted</b>
Ogallala and Edwards-Trinity (High Plains)	A GMA 2-wide average drawdown of 28 feet between 2013 and 2080.	8/17/2021
Dockum	A GMA 2-wide average drawdown of 31 feet between 2013 and 2080.	8/17/2021

<b>Non-Relevant Aquifers *</b>		
<b>Aquifer</b>	<b>Location</b>	<b>Justification</b>
Edwards-Trinity (Plateau)	GMA 2 (Andrews, Martin, and Howard counties)	Limited areal extent; low groundwater use
Pecos Valley	GMA 2 (Andrews County)	Limited areal extent; low groundwater use

\* Districts in a groundwater management area may, as part of the process for adopting and submitting desired future conditions, propose classification of a portion or portions of a relevant aquifer as non-relevant if the districts determine that aquifer characteristics, groundwater demands, and current groundwater uses do not warrant adoption of a desired future condition ([Texas Administrative Code § 356.31\(b\)](#)). Declaring an aquifer as non-relevant for the purposes of joint planning does not necessarily mean that the aquifer will not be managed by a local groundwater conservation district.
