POST OAK SAVANNAH GROUNDWATER CONSERVATION DISTRICT

GROUNDWATER MANAGEMENT PLAN

1. District Mission

The Post Oak Savannah Groundwater Conservation District (POSGCD) will conserve and regulate the use of groundwater through monitoring of aquifer levels and production and encourage conservation rules which limit pumping, thereby extending the quantity and quality of the water available in all of the aquifers in Milam and Burleson counties.

2. Time Period of this Plan

This plan will become effective upon adoption by the POSGCD Board of Directors and certification as administratively complete by the Texas Water Development Board. The plan will remain in effect for ten (10) years after the date of certification or until a revised plan is adopted and certified.

3. Background

The POSGCD was first created in Milam and Burleson counties by an act of the 77th Legislature in 2001 by House Bill 1784. The purpose of this bill was to provide locally controlled groundwater districts to protect and recharge groundwater and to prevent pollution or waste of groundwater in the central Carrizo-Wilcox area, to control subsidence caused by withdrawal of water from the groundwater reservoirs in that area, and to regulate the transport of water out of the boundaries of the districts. The POSGCD has 10 directors, 5 from each county, and does not have the power to tax and receives all of its revenue from fees imposed on municipal/commercial pumpers and transporters of groundwater. Successful confirmation elections were held in November 2002 in both counties in accordance with Sections 36.017, 36.018, and 36.019, Water Code, and Section 41.001, Election Code.

4. Groundwater Resources

The POSGCD has within its boundaries formations of the Carrizo-Wilcox, Trinity, Queen City, Sparta, and Brazos River Alluvium aquifers. Following is an approximate description of the aquifers and their location within the District. Each description will also include an estimate of Projected Water Availability in acre-feet per year according to Table 4 of the 2002 State Water Planning Database.
a) **Trinity**
The part of the POSGCD that contains the Trinity aquifer is located only in the extreme northwest corner of Milam County and is down dip only with its recharge area located in the counties to the north and west. Projected Water Availability in Milam County is 321 Acre-Feet per year.

b) **Carrizo-Wilcox**
The Carrizo-Wilcox aquifer runs through the POSGCD from southwest to northeast and is found with the down dip included under the extreme southeast corner of Milam County and all but the extreme southeast corner of Burleson County. The recharge for this portion of the Carrizo-Wilcox is located running through the central part of Milam County from southwest to northeast, and including approximately one third of the county itself. Projected Water Availability in Milam County is 46,458 Acre-Feet per year and in Burleson County is 46,458 Acre-Feet per year.

c) **Brazos River Alluvium**
Water bearing alluvial sediments occur in floodplain and terrace deposits of the Brazos River along the eastern boundaries of both Milam and Burleson counties. Irrigation accounts for almost all of the pumpage from this aquifer. Projected Water Availability in Burleson County is 9400 Acre-Feet per year.

d) **Queen City**
The Queen City aquifer down dip is found under all but the most extreme northwest corner of Burleson County, which is where part of the recharge for the Queen City aquifer is found. The balance of the area for recharge of this aquifer in the POSGCD is found running from the south-central part of Milam County to its eastern border along the border with Burleson County. Projected Water Availability in Burleson County is 672 Acre-Feet per year.

e) **Sparta/Jackson**
The Sparta/Jackson aquifer in the POSGCD is found running through Burleson County from northeast to southwest with the outcrop found in the northern part of the county and the downdip found in the central and southern parts. Projected Water Availability in Burleson County is 1666 Acre-Feet per year.
5. **Management Zones**

The District will be divided into groundwater management zones for the purposes of identifying the different characteristics and necessary management practices for each of the groundwater sources located there. These zones are as briefly described below:

5.1 **Trinity Management Zone**
This zone includes that part of the Trinity aquifer located in the northwest part of the District.

5.2 **Brazos Alluvium Management Zone**
This zone is located along the eastern boundaries of the District and is limited to the water bearing alluvial sediments of the Brazos River.

5.3 **Queen City and Sparta/Jackson Management Zone**
This zone includes all of the waterbearing outcrop and downdip formations of the Queen City and Sparta/Jackson aquifers which are found in the District.

5.4 **Carrizo-Wilcox/Simsboro Shallow Management Zone**
This zone includes all of the waterbearing formations of the outcrop and downdip of the Carrizo-Wilcox and Simsboro aquifers including, and north and west of, the Milano Fault Zone.

5.5 **Carrizo-Wilcox/Simsboro Deep Management Zone**
This zone includes all of the waterbearing formations of the outcrop and downdip of the Carrizo-Wilcox and Simsboro aquifers located south and east of the Milano Fault Zone.

6. **Production and Spacing of Wells**

Production and spacing of wells shall be regulated by the District according to the Rules of the District.

7. **Management of Groundwater Supplies**

The District will manage the supply of groundwater within the District in order to conserve the resource while seeking to maintain the economic viability of all resource user groups, public and private. In consideration of the economic and cultural activities occurring within the District, the District will identify and engage in such activities and practices, that if implemented would result in a reduction of groundwater use. An
observation network shall be established and maintained in order to monitor changing storage conditions of groundwater supplies within the District. The District will make a regular assessment of water supply and groundwater storage conditions and will report those conditions to the Board and to the public. The District will undertake, as necessary and co-operate with investigations of the groundwater resources within the District and will make the results of investigations available to the public upon adoption by the Board.

The District will adopt rules to regulate groundwater withdrawals by means of spacing and production limits. The District may deny a well construction permit or limit groundwater withdrawals in accordance with the guidelines stated in the rules of the District. In making a determination to deny a permit or limit groundwater withdrawals, the District will consider the public benefit against individual hardship after considering all appropriate testimony.

The relevant factors to be considered in making a determination to deny a permit or limit groundwater withdrawals will include:

1.) The purpose of the rules of the District
2.) The equitable distribution of the resource
3.) The economic hardship resulting from grant or denial of a permit or the terms prescribed by the permit
4.) The potential effect the permit may have on aquifer health and sustainability of the recharge on the aquifer as a whole.

In pursuit of the Districts mission of protecting the resource, the District may require reduction of groundwater withdrawals to amounts, which will not cause harm to the aquifer. To achieve this purpose, the District may, at the Boards discretion amend or revoke any permits after notice and hearing. The determination to seek the amendment or revocation of a permit by the District will be based on aquifer conditions observed by the District. The District will enforce the terms and conditions of permits and the rules of the District by enjoining the permit holder in a court of competent jurisdiction as provided for in Texas Water Code (TWC) Ch. 36.102.

A contingency plan to cope with the effects of water supply deficits due to climatic or other conditions will be developed by the District and will be adopted by the Board after notice and hearing. In developing the contingency plan, the District will consider the economic effect of conservation measures upon all water resource user groups, the local implications of the degree and effect of changes in water storage conditions, the unique hydrogeologic conditions of the aquifers within the District and the appropriate conditions under which to implement the contingency plan.

The District will employ all technical resources at its disposal to evaluate the resources available within the District and to determine the effectiveness of regulatory or conservation measures. A public or private user may appeal to the Board for discretion in enforcement of the provisions of the water supply deficit contingency plan on grounds of adverse economic hardship or unique local conditions. The exercise of said discretion by the Board, shall not be construed as limiting the power of the Board.
8. **Actions, Procedures, Performance and Avoidance for Plan Implementation**

The District will implement the provisions of this plan and will utilize the provisions of this plan as a guidepost for determining the direction or priority for all District activities. All operations of the District, all agreements entered into by the District and any additional planning efforts in which the District may participate will be consistent with the provisions of this plan.

The District will adopt rules relating to the permitting of wells and the production of groundwater. The rules adopted by the District shall be pursuant to TWC Chapter 36 and provisions of this plan. All rules will be adhered to and enforced. The promulgation and enforcement of the rules will be based on the best technical evidence available.

The District shall treat all citizens with equality. Citizens may apply to the District for discretion in enforcement of the rules on grounds of adverse economic effect or unique local conditions. In granting of discretion to any rule, the Board shall consider the potential for adverse effect on adjacent landowners. The exercise of said discretion by the Board, shall not be construed as limiting the power of the Board.

The District will seek the cooperation in the implementation of this plan and the management of groundwater supplies within the District. All activities of the District will be undertaken in co-operation and coordinated with the appropriate state, regional or local water management entity.

9. **Methodology for Tracking District Progress in Achieving Management Goals**

The District manager will prepare and present an annual report to the Board of Directors on District performance in regards to achieving management goals and objectives. The presentation of the report will occur during the last monthly Board meeting each fiscal year, beginning after the adoption and certification of this plan. The report will include the number of instances in which each of the activities specified in the Districts management objectives was engaged in during the fiscal year. Each activity will be referenced to the estimated expenditure of staff time and budget in accomplishment of the activity. The notations of activity frequency, staff time and budget will be referenced to the appropriate performance standard for each management objective describing the activity, so that the effectiveness and efficiency of the Districts operations may evaluated. The Board will maintain the report on file, for public inspection at the Districts offices upon adoption. This methodology will apply to all management goals contained within this plan.
10. **Management Goals, Objectives, & Performance Standards**

10.1 **Efficient Use of Groundwater**

**Management Objective:**
District will establish the “POSGCD Carrizo-Wilcox Aquifer Water Level Observation Well Program”, with a minimum of 6 observation wells located within the District. These observation wells will be measured a minimum of twice annually.

**Performance Standards:**
1.) Establish the Program and its criteria, and begin measurements of the observation wells within one year following the adoption and certification of this plan.
2.) Number of observation wells measured each 6 months by the District.

10.2 **Controlling and Preventing Waste of Groundwater**

**Management Objective:**
The District will provide educational leadership to the citizens of the District concerning this subject through at least one printed publication per year such as brochures, and public speaking at least once per year at service organizations or public schools.

**Performance Standard:**
The number of publications and speaking appearances by the District each year.

10.3 **Control and Prevent Subsidence**

Does not apply to Post Oak Savannah Groundwater Conservation District.

10.4 **Conservation of Groundwater**

**Management Objective:**
The District will provide educational leadership to the citizens of the District concerning this subject through at least one printed publication per year such as brochures, and public speaking at least once per year at service organizations or public schools.
Performance Standard:

The number of publications and speaking appearances by the District each year.

10.5 **Conjunctive Use of Surface and Groundwater**

Management Objective:

Each year the District will confer at least once with the Brazos River Authority (BRA) on cooperative opportunities for conjunctive resource management.

Performance Standard:

The number of conferences with the BRA on conjunctive resource management each year.

10.6 **Develop a Management Strategy to Address Drought Conditions**

Management Objective:

The District will develop and adopt a Drought Management Strategy Plan within one year of the adoption and certification of this plan, review it annually, and revise it if necessary. This plan will be implemented when specified conditions require.

Performance Standard:

1) Development and adoption of a Drought Management Strategy Plan within one year of the adoption and certification of this plan.
2) Review all of the conditions and requirements specified in the Drought Management Strategy Plan which would trigger implementation on an annual basis.
3) Implement the Drought Management Strategy Plan when specified conditions require.
10.7 Address Natural Resource Issues That Impact the Use and Availability of Groundwater and Which are Impacted By the Use of Groundwater

Management Objective:

(1) Each year the District will confer at least once with a representative of the Texas Railroad Commission (RRC) on the impact of oil and gas production on groundwater availability, as well as the impact of groundwater production on the production of oil and gas in the District. (2) Also, during each year the District will evaluate proposed new wells and the information submitted by the applicants on those wells prior to drilling in order to assess the impact of these wells on the groundwater resources in the District.

Performance Standard:

(1) The number of conferences with a representative of the Texas RRC each year as well as (2) ongoing reports to the POSGCD Board of Directors on the possible impacts of new wells on the groundwater resources in the District.

11. Natural or Artificial Recharge of Groundwater within the District

The District will assess the need and opportunity for recharge in the District on an annual basis with the first study to be completed within one year of the adoption and certification of this plan. Upon determining the need for recharge the District will adopt a plan for natural and/or artificial recharge within one year of the assessment for the need of that recharge, and review that plan on an annual basis. Possible practices for recharge in the District would be Brush Management or Construction of surface ponds in key recharge areas.

12. Projected Water Demands within the District

Below is a table of Projected Water Demands within the District in acre-feet per year according to Table 2 of the 2002 State Water Planning Database.

<td>30,425</td>
</tr>
<tr>
<td>Burleson</td>
<td>48</td>
</tr>
<tr>
<td>Total</td>
<td>30,472</td>
</tr>
</tbody>
</table>
16. **Estimate of Existing Total Useable Groundwater Within the District**

The Total Estimate of Existing Useable Groundwater in the District was derived from several sources and is found in the following table. The source for the Trinity, Brazos Alluvium, Queen City, and Sparta/Jackson aquifers in the District is the Projected Water Availability in acre-feet per year according to Table 4 of the 2002 State Water Planning Database, which is considered to be one of the most reliable sources of information for these aquifers at this time. Since none of these aquifers appear to be targeted for a substantial increase in production activity these estimates should prove satisfactory.

However, since the Carrizo-Wilcox/Simsboro aquifer group is targeted for extensive production exploration in the future it was necessary to evaluate these aquifers using GAM runs with anticipated regional production estimates and drawdown parameters. The source for the Carrizo-Wilcox/Simsboro aquifer information is taken from a Central Carrizo-Wilcox GAM run performed by the District’s hydrologist, URS, and shows Groundwater Availability in the District for this aquifer group is estimated at 85,000 acre-feet per year when constrained by District management goals for acceptable reductions in hydraulic head. The average regional pumping rates shown below result in approximately an average 30% reduction in the existing (2003) hydraulic head of the Carizzo and Simsboro aquifers by the year 2050. The District will periodically revise the estimate based on changes in the anticipated groundwater use in nearby counties, the presumed physical and hydraulic properties of the subsurface deposits, and changes to the GAM model. As additional information becomes available, the District will also reevaluate the estimate based on other criteria such as migration of the fresh water line and localized impacts in different management zones. ("Regional pumping that is consistent with management goals for drawdown.").

Special Meeting and Board Meeting
March 9, 2004 – 5:30 p.m.
Milam County Courthouse
100 South Fannin
Cameron, Texas

AGENDA

Special Meeting 5:30 p.m.
1. Call to Order.
2. Public Hearing on District Management Plan of Post Oak Savannah Groundwater Conservation
3. Public Hearing on Rules of Post Oak Savannah Groundwater Conservation District
4. Public Hearing on Permit Application Forms & Certificate of Permit Forms of Post Oak Savannah
   Groundwater Conservation District
5. Public Hearing on Schedule of Fees for Permit Applications and Services of Post Oak Savannah
   Groundwater Conservation District
6. Adjourn Special Meeting

Board Meeting Immediately following Special Meeting
1. Call to Order
2. Public Comment.
3. Approve minutes of the February 10, 2004 Board Meeting.
4. District Management Plan content, process, procedures and actions.
5. District Rules and Regulations content, process, procedures, and actions.
6. District Permit Application Forms & Certificate of Permit Forms content, process, procedures,
   and actions.
7. District Schedule of Fees for Permit Applications and Services content, process, procedures, and
   actions.
8. Report on delinquent accounts and possible actions.
9. Adjustment of account and refund for Gause Water Supply Corp.
10. Appointment of Board Assistant Secretaries and Responsibilities of Postings of Meetings
11. Discuss resolution or amendments to the resolution providing rules for existing wells and
    historic uses, establishing priorities, providing future production rights for local water
    utilities, and providing for related matters and take appropriate action.
12. Consider and Discuss Proposal for Voluntary Participation in the Texas Groundwater
    District Coalition for Legislative Services, content, process, procedures, and actions.
13. Consider and Discuss District Holiday schedule and take appropriate action.
14. Bills received and current financial status.
15. Dates, locations, and times of future meetings.

Signed this ___ day of January, 2004.

Gary Westbrook, General Manager
