- We are reminded each day about the importance of water - - when we turn on our faucets or when we see dried-up shorelines along area lakes.
- The water we drink tomorrow will be the product of today's visionary planning by the Texas Water Development Board and the regional planning groups.
- These are the leaders who know that our state's future depends on an adequate water supply.
- I am Larry Patterson, the Director of Engineering Services for Upper Trinity Regional Water District in Lewisville - - a regional water provider who takes seriously the responsibility for planning ahead and securing an adequate water supply for the many communities we serve.
- Upper Trinity and its customers are within Region C's planning area; and, Upper Trinity has worked closely with the planning group to ensure the ***Initially Prepared 2006 Region C Water Plan*** and the proposed water management strategies will provide our communities and utilities an adequate water supply today and for the next 50 years.
- Through careful planning and with targeted investments, Upper Trinity has an adequate supply of water in its diversified portfolio of water resources. Yet, our job is not done.
- Long-range planning is a way of life - - a prerequisite for success. Upper Trinity's planning is producing results - - each and every day.
