### HISTORICAL WATER QUALITY DATA

#### **INTRODUCTION**

Water quality monitoring of the lakes and streams in the Upper Trinity River Basin has been conducted for many years by various federal, state, and local agencies. Data collected during the period 1980 through 1987 were used to assess historical water quality for this study. Agencies which have performed water quality monitoring or studies in this area include: the U.S. Geological Survey, the Texas Water Commission, the Fort Worth Water Department, the Texas Parks and Wildlife Department, the Texas Department of Health, and the Tarrant County Water Control and Improvement District No. 1. Data collected by other agencies (e.g., private firms or state universities) exist but have not been included in this study.

Intensive water quality surveys were performed for this study by Alan Plummer and Associates, Inc., in association with Tarrant County Water Control and Improvement District No. 1, the City of Arlington's Pierce-Burch Water Treatment Plant laboratory, and the Trinity River Authority's Central Regional Wastewater Treatment Plant laboratory.

Summaries of the water quality data available in the study area were included in Chapter III of the project summary report. Data for the individual stations are presented in this appendix. A listing of the water quality monitoring stations used in the historical water quality assessment is presented in Table E-1. The location of the monitoring stations are shown on Figures E-1 through E-6.

#### **NUMERICAL CRITERIA FOR NON-TOXIC MATERIALS**

The State of Texas has established numerical water quality criteria for chlorides, sulfates, total dissolved solids, dissolved oxygen, pH, fecal

coliforms and temperature for the waters of the State. Numerical criteria are developed based on the intended use of the stream or water body and historical water quality. The current numerical criteria for each of the segments in the study area are presented in Table E-2. In addition, the numerical criteria for 1985 and 1981 are listed in Table E-3 and Table E-4, respectively to present all of the numerical criteria which was in existence over the course of the reporting period.

Water quality data for those parameters listed in the numerical criteria were summarized for each monitoring station and by segment over the reporting period of 1980 through 1987. The summary of the water quality data for each segment is presented in Table E-5. The summary of the water quality data for each monitoring station is presented in Table E-6 for the same parameters.

#### NUTRIENTS

The nutrients of primary concern in the water quality assessment include nitrogen and phosphorus. The nitrogen series consists of total kjeldahl nitrogen (organic plus ammonia), ammonia, nitrites, and nitrates. The phosphorus series includes total phosphorus and dissolved orthophosphorus.

Applicable criteria for nutrients cannot be established because sufficient information on nutrient cycling in Texas waters and cause-effect relationships between nutrient concentrations and water quality is not presently available.

The water quality data for nutrients were summarized for each monitoring station and by segment over the reporting period of 1980 through 1987. The summary of the water quality data for each segment is presented in

Table E-7 and the nutrient water quality data for each monitoring station is summarized in Table E-8.

### TOXIC MATERIALS

All of the waters in the Upper Trinity River Basin are classified for contact recreation, public water supply, and high quality aquatic life. They are therefore subject to the most stringent of the toxic material numerical criteria. Numerical criteria have been established for those specific toxic substances for which adequate toxicity information is available and which have the potential for exerting adverse impacts on the waters of the State. The State's numerical criteria applicable to toxic substances in the study area are presented in Table E-9.

The frequency and list of toxic parameters tested varied tremendously throughout the study area, and metals were measured more frequently than organics.

Metals were measured in Village Creek, Lake Arlington, Lake Benbrook, and the Clear Fork of the Trinity River. The metals data are presented in Table E-10. Organics were measured in whole water and bottom sediment samples in the study area. Organic data from whole water samples are presented only for Lake Arlington in Table E-11. Organic from sediment samples were measured in several lakes in the study area and the data are presented in Table E-12.

SUMMARY OF NUTRIENT LEVELS BY SEGMENT  
UPPER TRINITY RIVER BASIN

Stream segment	Sample measurement	TKN (1)	Amm-N (1)	NO2-N (1)	NO3-N (1)	NO3-N and NO2-N (1)	Total Phosphorus (2)	Dissolved Ortho-Phosphorus (2)
<u>0807</u>								
Lake Worth	Number of samples	4	13	4	13	-	13	13
	Minimum	.85	0.01	.002	0.01	-	0.01	0.01
	Maximum	1.70	0.31	.003	0.19	-	0.10	0.03
	Average	1.14	0.145	.00225	0.041	-	0.035	0.01
<u>0808</u>								
West Fork of Trinity River	Number of samples	13	32	13	32	-	32	32
-Lake Worth to Eagle	Minimum	1.10	0.01	0.001	0.01	-	0.01	0.01
Mountain Dam	Maximum	7.70	0.92	0.05	1.71	-	8.80	0.29
	Average	3.28	0.12	0.01	0.19	-	0.35	0.03
<u>0809</u>								
Eagle Mountain Reservoir	Number of samples	186	194	182	63	-	193	192
	Minimum	0.1	0.01	.001	0.01	-	0.01	0.01
	Maximum	11.9	0.78	.21	1.2	-	0.90	0.5
	Average	2.8	0.09	.01	0.25	-	0.07	0.03

(1) Mg/l as N      (2) Mg/l as P

TABLE E-7  
 SUMMARY OF NUTRIENT LEVELS BY SEGMENT  
 UPPER TRINITY RIVER BASIN  
 (continued)

Stream segment	Sample measurement	TKN (1)	Amm-N (1)	NO2-N (1)	NO3-N (1)	NO3-N and NO2-N (1)	Total Phosphorus (2)	Dissolved Ortho-Phosphorus (2)
<u>0810</u>								
West Fork Trinity River	Number of samples	13	37	13	37	-	37	37
-Eagle Mountain Lake	Minimum	0.61	0.01	.001	0.01	-	0.04	0.01
Headwater to Bridgeport Dam	Maximum	16.8	1.00	.070	5.01	-	0.50	0.38
	Average	4.62	0.12	.020	0.37	-	0.20	0.07
<u>0811</u>								
Lake Bridgeport Dam	Number of samples	8	17	7	17	-	17	17
	Minimum	0.81	0.01	.002	0.02	-	.01	0.01
	Maximum	1.23	0.12	.002	0.20	-	0.04	0.02
	Average	0.95	0.06	.002	0.4	-	0.02	0.01
<u>0812</u>								
West Fork Trinity River above Lake Bridgeport	Number of samples	-	20	-	20	-	20	20
	Minimum	-	0.02	-	0.02	-	0.04	0.01
	Maximum	-	0.29	-	1.19	-	0.74	0.12
	Average	-	0.10	-	0.25	-	0.25	0.03

**TABLE E-9**  
**CRITERIA FOR SPECIFIC TOXIC MATERIALS**

Parameter	Fresh Water Acute Criteria (ug/l)	Fresh Water Chronic Criteria (ug/l)
Aldrin	3.0	----
Arsenic	360	190
Cadmium	32.2	1.1
Chlordane	2.4	0.0043
Chlorpyrifas	0.083	0.041
Chromium (Tri)	1679	200
Chromium (Hex)	16	11
Copper	18.5	12.36
Cyanide	45.78	10.69
DDT	1.1	0.0010
Demeton	---	0.1
Dieldrin	2.5	0.0019
Endosulfan	0.22	0.056
Endrin	0.18	0.0023
Guthion	---	0.01
Heptachlor	0.52	0.0038
Lindane	2.0	0.08
Lead	77.5	3.02
Malathion	---	0.01
Mercury	2.4	0.012
Methoxychlor	---	0.03
Mirex	---	0.001
Nickel	1370	152.3
PCB's (total)	2.0	0.014
Parathion	0.065	0.013
Pentachlorophenol	12.26	7.74
Selenium	260	35
Silver	3.78	0.49
Toxaphene	0.78	0.0002
Zinc	113	102.4

Note: Acute toxicity exerts short-term lethal impacts. Chronic toxicity exerts sublethal detrimental effects over an extended period such as growth impairment and reduced reproduction.
