EXPLANATION

Sampled Well or Spring
- 62 Chloride concentration
- 127 Sulfate concentration
- 38 Nitrate concentration
- 388 Dissolved-solids concentration

Chemical concentrations in milligrams per liter

Source of Water
- Quaternary alluvium
- Undivided surficial Quaternary deposits
- Seymour Formation
- Cretaceous rocks, undivided
- San Angelo Formation
- Chupapa Formation
- Vale Formation
- Bullock Dolomite Member of Vale Formation
- Arroyo Formation
- Lueders Formation
