SUSPENDED-SEDIMENT LOAD OF TEXAS STREAMS

Compilation Report

October 1975-September 1982

INTRODUCTION

This report covers the 1976 through 1982 water years and is a supplement to Department of Water Resources Report 233, Texas Water Development Board Reports 184, 106, and 45, Texas Water Commission Bulletin 6410, and Texas Board of Water Engineers Bulletin 6108. These prior publications presented the results of suspended-sediment load measurements at permanent observation points from the beginning of record through the 1975 water year. (A water year extends from October 1 through the following September 30, and is identified by the year in which it ends.) No reconnaissance-type determinations of short-period record or intermittent record are compiled.

This report was prepared under the general direction of B. R. Critendon, P.E., and Louis Michael Lynn, P.E., of the Surface Water Unit, Water Data Collection, Studies and Planning Division. The author was assisted in data compilation by Jimmy Tinsley, Engineering Technician.

The English units used in this report may be converted to metric units by the following conversion factors:

| <u>From</u> | <u>Multiply by</u> | <u>To obtain</u> |
|--------------|--------------------|-------------------------------------|
| feet | .3048 | meters (m) |
| miles | 1.609 | kilometers (km) |
| square miles | 2.590 | square kilometers (km^2) |
| acre-feet | 1,233 | cubic meters (m^3) |
| fluid ounces | 29.57 | milliliters (ml) |
| pounds | .454 | kilograms (kg) |

| <u>From</u> | <u>Multiply by</u> | <u>To obtain</u> |
|-----------------------|--------------------|--|
| pounds per cubic foot | 16.02 | kilograms per cubic meter (kg/m^3) |
| tons (2,000 pounds) | 907.2 | kilograms (kg) |
| tons per square mile | 350.3 | kilograms per square kilometer (kg/km^2) |
| tons per acre-foot | .7358 | kilograms per cubic meter (kg/m^3) |

STATUS OF SUSPENDED-SEDIMENT SAMPLING STATIONS

During the period covered by this report, 40 suspended-sediment sampling stations were operated. This activity was previously conducted by the Texas Department of Water Resources. However, with the reorganization of the Agency on September 1, 1985, the Texas Water Development Board has been assigned responsibilities for State activity in this field of surface water investigations.

Due to a reduction in State funding to the Department of Water Resources for fiscal year 1980, 13 sampling stations were discontinued. A total of 27 stations are presently in operation.

COOPERATION

The following agencies and organizations cooperated with the Texas Water Development Board in the operation of, or furnished data for, suspended-sediment sampling stations included in this report:

Lower Colorado River Authority, Austin;

Brazos River Authority, Waco;

U.S. Geological Survey, Water Resources Division, Austin;

Stephen F. Austin State University, Nacogdoches;

City of Corpus Christi.

EXPLANATION OF DATA

Suspended-sediment sampling stations operated by the Texas Water Development Board at or near streamflow-measuring stations use streamflow records collected by the U.S. Geological Survey in the determination of estimated suspended-sediment loads. The identification number appearing with the station name is the standard U.S. Geological Survey number for that measurement station. Those suspended-sediment sampling stations operated by the Texas Water Development Board at Possum Kingdom Reservoir and Lake Buchanan, where samples are collected from releases, use computed-release records furnished by the reservoir operator in the determination of estimated suspended-sediment loads.

Samples are collected in eight ounce narrow-neck bottles at a position approximately one foot below the water surface near midstream. The percentage of suspended sediment by weight obtained from the sample is multiplied by the factor 1.102 to obtain the mean percentage of suspended sediment in the vertical profile. Laboratory determinations were equated to the corresponding streamflow in determining the total suspended-sediment load.

The Texas Water Development Board uses as the average weight of water, 62.5 pounds per cubic foot. Temperature and dissolved constituents affect the density of water. The average water weight selected is used for all calculations. The density of sediment used for all calculations is 70 pounds per cubic foot. It is emphasized that this implied density is an estimated average which may be expected for ultimate consolidation. Individual sediment deposits will have varying densities dependent on several factors. The assumptions of density may also be expressed as:

one acre-foot of stream flow = 1,361.25 tons, and

one acre-foot of sediment = 1,524.60 tons.

No attempt has been made to include in this report that sediment which may be moved by a flowing stream along its bottom, commonly referred to as "bed load."

Presented with the sediment data obtained for the 1976 through 1982 water years is a summary table showing maximum, minimum, and average annual suspended-sediment transport passing each gaging point for a total period in full water years.

Monthly values of sediment conversions to acre-feet are rounded to the nearest whole number and are based on a density of 70 pounds per cubic foot. Summary streamflow and sediment-load values for each year are totals of the monthly figures. Annual values of volume in acre-feet are determined from the total tonnage measured for the year rounded to the nearest whole number. Therefore, annual volumes do not always coincide with totals of the 12 monthly values each year.

Sediment outflow for four reservoirs in Texas were obtained during this report period. Records were taken at Possum Kingdom Reservoir, Brazos River Basin; Somerville Lake, Brazos River Basin; Lake Buchanan, Colorado River Basin; and, Lake Corpus Christi, Nueces River Basin.

OTHER SEDIMENT RECORDS

Records of suspended-sediment loads in Texas from sampling stations operated by the U.S. Geological Survey, and by the International Boundary and Water Commission—United States and Mexico, are collected in addition to those contained in this report. Daily and partial records obtained by the U.S. Geological Survey are reported annually in a publication titled "Water Resources Data for Texas." Suspended-sediment records for the Rio Grande collected by the International Boundary and Water Commission are published annually in a bulletin titled "Flow of the Rio Grande and Related Data."

The U.S. Geological Survey has been collecting suspended-sediment data in the Colorado River basin since 1901. The most recent data available for the Colorado River at Austin, Texas, for the period 1951-1960, indicate an average annual load of 21.7 million tons of sediment, or an average annual load of 1.16 gpm. The data for the Colorado River at Austin, Texas, are the only data available for the Colorado River basin.

The International Boundary and Water Commission has been collecting suspended-sediment data in the Rio Grande basin since 1901. The most recent data available for the Rio Grande at the mouth of the Colorado River, near Laredo, Texas, indicate an average annual load of 1.07 gpm. The data for the Rio Grande at Laredo, Texas, are the only data available for the Rio Grande basin.

Information on suspended-sediment data for the Colorado River basin is presented in the following section.

Colorado River Basin Suspended-Sediment Data

Information on suspended-sediment data for the Colorado River basin is presented in the following section. The data are presented in two parts: (1) suspended-sediment data for the Colorado River basin, and (2) suspended-sediment data for the Colorado River basin.

Information on suspended-sediment data for the Colorado River basin is presented in the following section. The data are presented in two parts: (1) suspended-sediment data for the Colorado River basin, and (2) suspended-sediment data for the Colorado River basin.

Information on suspended-sediment data for the Colorado River basin is presented in the following section. The data are presented in two parts: (1) suspended-sediment data for the Colorado River basin, and (2) suspended-sediment data for the Colorado River basin.

TEXAS RIVER TRUST
1977-1982 SUSPENDED-SEDIMENT LOADS FOR RIVER NEARLY REVIEW

1. Sampling Stations and Locations

Location: The sampling stations for suspended sediment are located along the Colorado River near Austin.

Sampling Station: The sampling stations are numbered sequentially from upstream to downstream.

| STATION NO. Period | NAME | SUSPENDED-SEDIMENT LOADS TONS | DATE | WATER LEVEL |
|-----------------------|------|----------------------------------|------|----------------|
| 1 | 1976 | 1,000 | 1976 | 1976 |

BRAZOS RIVER BASIN

8088500 POSSUM KINGDOM RESERVOIR NEAR GRAFORD

Net Drainage Area: 14,030 square miles.

Location: Samples taken in tailrace and over spillway. Outflow records were obtained from computed releases as determined by Brazos River Authority. Outflow records for period October 1953 through September 1959 are streamflow as gaged at Brazos River near Palo Pinto station below Possum Kingdom Reservoir. Inflow estimates were computed by adjusting Brazos River near South Bend streamflow between that gage and Morris Sheppard Dam.

Records Available: January 15, 1942 through September, 1978 except for October 1960.

COLORADO RIVER BASIN
8158000 COLORADO RIVER AT AUSTIN

Net Drainage Area: 27,606 square miles.

Location: U.S. Highway 183 bridge. Flow records are from stream-gaging station Colorado River at Austin, 1,000 feet upstream from bridge.

Records Available: August 2, 1937 to date, except for May through September in 1962, and November 1963 through June 1964. Record reflects changing development above Austin. The record summary below is made for the period following closure of Town Lake Dam in Austin.

GUADALUPE RIVER BASIN

8176500 GUADALUPE RIVER AT VICTORIA

Net Drainage Area: 3,766 square miles.

Location: U.S. Highway 59 bridge in Victoria. Flow records are from stream-gaging station at same location.

Records Available: September 1945 to date. The record summary below is made for the period following the construction of Canyon Dam in 1964.

| RECORD PERIOD | STREAMFLOW ACRE-FEET | SUSPENDED-SEDIMENT LOAD OF STREAM | | | DRY SEDIMENT PCT BY WEIGHT |
