DATE: November 10, 2009

SUBJECT: Consider approval by minute order of revised population and water demand projections for regional water planning areas C and H, and revised water demand projections for the Llano Estacado (Region O) planning area

ACTION REQUESTED

Approve revised population and water demand projections for Regions C, H and O for application in 2011 regional water plans.

BACKGROUND

The Texas Water Development Board (TWDB) is responsible for adopting population and water demand projections for the regional and state water planning processes [31 TAC, §357.5 (d)(1-2)]. With the exception of steam-electric water demands, Board-approved water demand projections from the 2007 State Water Plan are serving as default projections for the current planning cycle (2007-2012) unless a regional water planning group formally requests revisions based on changed conditions in a given planning area.

Upon receiving a formal request to revise population or water demand projections, TWDB staff review the changes in conjunction with staff from the Texas Commission on Environmental Quality, the Texas Parks and Wildlife Department, and the Texas Department of Agriculture to assess whether the changes are valid for use in regional and state water planning and comply with statutory and administrative rule requirements.

TWDB staff and representatives of coordinating agencies have reviewed the requests in this memorandum and have determined that the changes are valid and consistent with criteria for

demand revisions specified in statute and administrative rules, and are hereby recommended for approval (staff agency review memorandum is included in Attachment A).

REGION C

Population and Municipal Water Demands

Representatives of several political subdivisions have requested that the Region C planning group revise 2006 population and corresponding municipal water demand projections. Region C's request is based in part on a special study generated under contract with the TWDB as part of Phase I of the 2011 regional water planning cycle. At a regional level, population increases are approximately one percent or less, and water demand increases are roughly one to two percent higher (Table 1). Attachment A to this memorandum shows changes at the local level. For cities or utilities with changes in population, corresponding municipal water demands were adjusted by multiplying revised populations by per capita use values from the 2006 plan. However, in some cases the planning group requested changes to per capita use values (shown in Attachment A).

Table 1: Proposed Changes to Population and Municipal Water Demand Projections for the Region C 2011 Water Plan

	2010	2020	2030	2040	2050	2060
Population

% Change	+0.8%	+0.3%	+1.4%	+2.2%	+1.6%	+0.4%

Mining Water Demands

Increased mining water demands in Region C are associated with drilling water requirements for new natural gas wells in the Barnett Shale. With the requested changes, Region C's mining demands would rise by approximately 37 percent in 2010 and nine percent in 2060 (Table 2). Revisions at the county-level are available in Attachment A.

Table 2: Proposed Changes to Mining Water Demand Projections for the Region C 2011 Water Plan

	2010	2020	2030	2040	2050	2060
2006	30,240	34,561	37,350	40,206	43,155	45,920

% Change	+37.3%	+12.7%	+11.5%	+10.6%	+9.9%	+9.3%

REGION H

Recent data published by the Texas State Demographer indicate that in 2007 population levels in Region H exceeded levels predicted for the 2006 Region H plan by 4.5 percent. To account for this faster than expected growth, Region H has requested population increases ranging from 4.0 to 4.3 percent (Table 3). Attachment A provides additional supporting data and revisions for individual cities and water providers. Projected municipal water demands increase by about six to seven percent over the planning period.

REGION O

Region O's request is based in part on a special study generated under contract with the TWDB as part of Phase I of the 2011 regional water planning cycle.[1] According to the study, from 2005 through 2007 the number of dairies in Region O increased from 37 to 59, and the estimated number of dairy cows rose from roughly 55,000 to 139,500 over the two-year period. Industry experts and regional producers expect this trend to continue and recommended that the group reevaluate their livestock projections. Although, the planning group is requesting that projected demands be higher, they are reducing estimated water requirements per animal per day from 65 gallons to 48 gallons due to more efficient waste removal systems in milking parlors at newer dairies. At a regional level, demands are reduced in 2030, while proposed increases in other decades range from one to five percent (Table 4).

[1] Llano Estacado Regional Water Planning Group (Region O) 2011 Regional Water Plan Phase I Report: Estimates of Population and Water Demands for New Ethanol Plants and Expanding Dairies. Research report prepared for the Texas Water Development Board. April 30 2009.

Table 4: Proposed Changes to Livestock Water Demand Projections for the Llano Estacado (Region O) 2011 Water Plan (2010-2060, acre-feet per year)						
	2010	2020	2030	2040	2050	2060
2006	49,257	59,189	61,761	64,493	67,389	70,457
2011	51,295	57,740	61,373	65,276	69,466	73,964
Change	+2,038	-1,449	-388	+783	+2,077	+3,507
% Change	+4.1%	-2.4%	-0.6%	+1.2%	+3.1%	+5.0%

Since the 2006 Region O water plan was published, several new ethanol processing plants have located in the region. As of early 2008, there were three ethanol facilities operational with a combined generating capacity of 110 million gallons per year, and one 50 million gallon capacity plant is expected to be operational shortly. The combined water requirement of these facilities is 3.5 million gallons per day (3,920 acre-feet per year) operating at full capacity, which is reflected in Region O's revised manufacturing water demand projections (Table 5). County-level projections are available in Attachment A.

Table 5: Proposed Changes to Manufacturing Water Demand Projections for the Llano Estacado (Region O) 2011 Water Plan (2010-2060, acre-feet per year)

Change	+3,920	+3,920	+3,920	+3,920	+3,920	+3,920
% Change	+33.3%	+30.7%	+29.0%	+27.4%	+26.2%	+24.5%

REVISED STATE TOTALS

Combined changes to population estimates for regions C and H would increase state population totals by about one percent in each decade, and projected municipal water demands would rise by about two percent (Table 6). Changes to mining demands for regions C and O would result in increases of about one to three percent depending on the decade, and manufacturing demands would rise by less than one percent based on changes for Region O. Please note that 2006 projections in Table 6 take into account changes approved by the Board in 2009 for regions A, G, K, N and P.

* 2006 projections include revisions already approved by the Board for 2011 regional water plans (Regions A, G, K, N and P).						

RECOMMENDATION

Approve population and water demand projections shown in Tables 1 through 6 of this memorandum for use in the development of 2011 regional water plans and the 2012 State Water Plan.

ANTICIPATED OPPOSITION

None at this time.

This recommendation has been reviewed by legal counsel and is in compliance with applicable statutes and Board rules.

Ken Petersen
General Counsel

SUBJECT: Revised population and water demand projections for the Region C, Region H and Region O regional water planning areas (2007-2012 planning cycle)

Background

Population and water demand projections from 2006 regional water plans are serving as the basis for projections in the current planning cycle. However, the Texas Water Development Board (TWDB) may consider requests to amend 2006 population and water demand projections if conditions in a planning region have changed significantly.

As specified in Section 357.5 (d)(2), Title 31 of the Texas Administrative Code (TAC), entities wishing to revise projections address their requests through their respective regional water planning group. If a planning group concurs, they submit requests to the Executive Administrator of the TWDB.

TWDB staff coordinates reviews of each request with the Texas Commission on Environmental Quality, the Texas Parks and Wildlife Department, and the Texas Department of Agriculture. Designated representatives from each agency must recommend each revision. The Board is responsible for approving and adopting population and water demand projections as specified in (§357.5 (d)(1), 31 TAC).

Region C

Population and Municipal Water Demands

Representatives of several political subdivisions in Region C have requested that the Region C planning group revise 2006 population and corresponding municipal water demand projections.

Prior to submittal to the Board, reviewing agencies (the TWDB, TCEQ, TDA and TPWD) examined requested changes. To ensure consistency and to maintain public credibility in Board projections, population estimates published by the Texas State Data Center served as the primary benchmark for assessing the accuracy of requests. The base year for TWDB projections in the 2002-2007 planning cycle was 2000, which is the same year that the U.S. Department of Commerce released results of the U.S. Census. In years in between census releases, the State Data Center generates annual estimates for each county in Texas. Using these estimates, requested changes were evaluated using the following standards:

1) if State Data Center population estimates for 2007 exceed TWDB projected values for the same year, increases in regional totals in an amount comparable to the difference were considered justifiable (Table A-1); and

2) if State Data Center estimates were less than TWDB projections, requested increases to regional level totals were not considered valid; however, in some cases localized sub-regional adjustments and redistributions of projected populations were considered reasonable as long as regional totals did not increase.

To maintain county and regional level totals, planning groups offset increases by redistributing population at the sub-county level. For example, if increased projections for a given county were not justified, increases for a city could be offset by reducing "county-other" populations.

In addition, some planning groups included "new" Water User Groups (WUGs) previously included in the category of county-other. To qualify as new WUGs, a city must now have a population of at least 500 and non-city WUGs (e.g., utilities, water supply corporations) must provide on average 250,000 gallons per day to residential, commercial or institutional customers (i.e., municipal water use). For cities or utilities with changes in population, the TWDB adjusted corresponding water demands by multiplying revised populations by per capita use values from the 2007 State Water Plan. In some cases, both Regions C and H have requested changes to per capita use values.

On average, across all regions TSDC estimates exceed TWDB projections by around 1.2 percent. For Region C, TWDB projections were low by a factor of only 0.0051 percent, and thus substantial regional level increases for Region C are not warranted. However, at the sub-regional level there are communities that have

grown faster or slower than expected, and the planning group has requested revised projections for these entities.

To account for faster than expected growth in some communities, Region C has requested population increases in future decades ranging from 0.7 percent to 1.5 percent - an additional 45,911 people in 2010 and 152,243 in 2040 (Table A-1). To account for growth leveling off in the future due to land constraints, the region also expects a decline in population of (-0.3) percent in 2060 – a reduction of 42,257 people. Changes for individual cities and utilities are listed in Appendices 1 and 2.

Table A-1: Proposed Changes to Population Projections for the Region C 2011 Water Plan (2010-2060, acre-feet per year)

	2010	2020	2030	2040	2050	2060
Population						
2006	6,625,282	7,966,389	9,093,847	10,246,795	11,559,990	13,087,849
2011	6,670,493	7,971,728	9,171,650	10,399,038	11,645,686	13,045,592
Change	+45,211	+5,339	+77,803	+152,243	+85,696	-42,257
% Change	+0.7%	+0.1%	+0.8%	+1.5%	+0.7%	-0.3%
Municipal Water Demands						
2006	1,534,703	1,828,831	2,060,118	2,294,491	2,574,265	2,915,773
2011	1,546,970	1,833,671	2,087,597	2,344,115	2,612,176	2,924,157
Change	+12,267	+4,840	+27,479	+49,624	+37,911	+8,384
% Change	+0.8%	+0.3%	+1.4%	+2.2%	+1.6%	+0.4%

For cities or utilities with changes in population, corresponding municipal water demands were adjusted by multiplying revised populations by per capita use values from the 2006 plan. However, in some cases the planning group has requested changes to gallons per capita per day (GPCD) values, which are shown in Appendix 3. At the regional level, increases in municipal water demand would range from 0.31 percent to 2.27 percent over the planning period.

Mining Water Demands

Increased mining water demands in Region C are associated with drilling water requirements for new natural gas wells in the Barnett Shale. With the requested changes, Region C's mining demands would rise by approximately 37 percent in 2010 and nine percent in 2060 (Table A-2).

Region H

Population and Municipal Water Demands

Representatives of several political subdivisions in Regions H have requested that the Region H planning group revise 2006 population and corresponding municipal water demand projections. Recent data published by the Texas State Demographer indicate that in 2007 population levels in Region H exceeded levels predicted for the 2006 Region H plan by 4.5 percent. To account for this faster than expected growth, Region H has requested population increases ranging from 4.0 to 4.3 percent over the planning horizon (Table A-3). Corresponding increases in municipal water demands in the region range from 6.4 percent to 6.9 percent over the planning period. Changes for individual cities and utilities are listed in Appendices 4 and 5. Region H has also requested several changes in GPCD values: 1) the City of Huntsville would increase from 130 to 160; 2) the West Harris County Regional Water Authority would rise from 151 to 169, and 3) the new water user group North Fort Bend Water Authority has been assigned a GPCD of 210.

Table A-3: Proposed Changes to Population Projections for the Region H 2011 Water Plan (2010-2060, acre-feet per year)

Region O

Livestock Water Demands

Region O's request is based in part on a special study generated under contract with the TWDB as part of Phase I of the 2011 regional water planning cycle. According to the study, from 2005 through 2007 the number of dairies in the region has risen from 37 to

59, and the estimated number of dairy cows has grown from roughly 55,000 to 139,500. Industry experts and regional producers expect this trend to continue and recommended that the group reevaluate their livestock projections. Although the planning group is requesting that projected demands increase, they are reducing estimated water requirements per animal per day from 65 gallons to 48 gallons because of more efficient waste management systems in milking parlors at newer dairies. At a regional level, proposed changes to livestock demands range from a decline of about one percent (388 acre-feet in 2030) to an increase of about five percent (3,507 acre-feet in 2060).

Manufacturing Water Demands

Since the 2006 Region O water plan was published, several new ethanol processing plants have located in Region O. As of early 2008, there were three ethanol facilities operational with a combined generating capacity of 110 million gallons per year, and one 50 million gallon capacity plant is expected to be operational soon. The combined water requirement of these facilities is 3,920 acre-feet per year when operating at full capacity (Table 5).

After satisfying required public notice and public hearing requirements, regions C, H and O have requested that the TWDB Executive Administrator review and approve these changes. TWDB staff and representatives of coordinating agencies have reviewed the requested amendment and have determined that the recommended changes are in compliance with the criteria for demand revisions as specified in administrative rules and the TWDB's *Guidelines for Regional Water Plan Development* (2007-2012).

TWDB staff and representatives of coordinating agencies have reviewed the projections, and have determined that the new projections are reasonable and are in compliance with statute and administrative rules.
